OUTLINES
OF THE
WORLD'S HISTORY,
Ancient, Medieval, and Modern,

WITH SPECIAL RELATION TO THE
HISTORY OF CIVILIZATION AND THE PROGRESS
OF MANKIND.

*For use in the Higher Classes in Public Schools, and in High Schools,
Academies, Seminaries, etc.*

By WILLIAM SWINTON,

Author of Condensed History of the United States, Campaigns of the Army of the Potomac,
Word-Analysis, Word-Book, etc.

IVISON, BLAKEMAN & COMPANY,
PUBLISHERS,
NEW YORK AND CHICAGO.

Entered according to Act of Congress, in the year 1874,
BY IVISON, BLAKEMAN, TAYLOR, & CO.,
in the office of the Librarian of Congress, at Washington.

IN preparing the following Outlines of the World's History the author has assumed that the proper aim of such historical study as can be pursued in high schools and academies should be to give the learner a *general view* of human progress, — to furnish, for example, brief but explicit answers to such questions as these :

1. What *were* the Egyptians, Greeks, Persians, Hebrews, Latins, Spaniards, English, etc.? What did each of these nations contribute to the common stock of civilization?

2. In what *forms* did the mind of the race express itself: in religion, war, law-making, political organization, literature, art?

3. What was the actual *life of the people* themselves, — their condition as regards political freedom, education, physical well-being, food, dress, trade, society, etc.? What *were* their ways of thinking, and how did these show themselves in the manners, customs, and social usages of the time?

4. What have been the great *steps in human progress*, — the discoveries, social and political changes, advances in thought and skill, that have carried forward civilization and the "betterment of man's estate" (Bacon); and what

is the series of events that has brought the world up to its present standard of enlightenment and knowledge?

These are questions that we have learned to ask only in comparatively recent times. The asking of them and the answering of them have given us history in its modern sense ; that is to say, history as a showing forth of the life of nations, in place of history as the mere biography of kings, or the record of battles and sieges, of dynasties and courts.

The theory of this book may be stated in a single sentence : it is, to bring to the treatment of history for elementary instruction the same method that has proved fruitful and interesting in the larger classic works. Such treatment is in marked contrast with that of the compendiums in ordinary use, which consist mainly of catalogues of facts and of chronologic data. The author believes, however, that the judgment of progressive teachers will fully coincide with his own in this : that far more valuable and more lasting results can be secured by giving scholars a vivid general view of the institutions and civilization of the greater nations than by cramming the memory with ever so imposing an array of isolated facts and dates.

This book has grown out of a great deal of experimenting with classes, — testing of *what* pupils can take in and assimilate, of what becomes fruitful in their minds, and of what, on the other hand, is retained with difficulty or forgotten with ease. Care has been taken to cast the paragraphs into such a form that the subject-matter of each may be easily grasped by the pupil and the same readily elicited by means of the marginal notes, — a device which seems to be better suited to a work of this grade than mere literal *questions* would be. It is scarcely necessary to

call attention to the maps: they have been drawn with great care by Mr. Jacob Wells, and will be found both accurate and ample. The engraving-work, which is exceptionally excellent, is by Mr. John Karst.

In addition to these features there are two salient points to which notice is called: 1. This manual is made from modern *material*, and presents the fruit of those researches that have so essentially modified and so greatly enlarged our views both of antiquity and of more recent times. 2. It is written in the spirit of the modern *method*,—that method which deals with the broad, vital facts, rather than with the pedantries of history.

As, by the courses of study in our public schools, general history is not taken up until after several years' work on the history of our own country, it would have been quite superfluous to insert here an imperfect compendium of what has already been gone over in detail; hence in this book the history of the United States is treated only in so far as it touches that of other nations.

The author is deeply impressed with the conviction that history, studied in the right manner, is of fundamental importance in the growth of the mental and moral nature. And he believes that such study is of especial moment in our own country, as a preparation for citizenship in a free, self-governing nation: for how can we appreciate what we enjoy, unless we know how it *came to be*? In the sincere hope that this survey of the providential ordainment of human affairs may prove helpful, both to intellectual growth and the formation of character, it is commended to the judgment of the teaching profession.

WILLIAM SWINTON.

CAMBRIDGE, Aug., 1874.

NOTE TO REVISED EDITION.

IN the present edition the Outlines of History has undergone a careful revision in the light of valuable suggestions from teachers who have had the work in use in the class-room. To such teachers the author takes pleasure in expressing his hearty thanks. He has also to acknowledge in a very particular manner his obligations to PROF. C. K. ADAMS, of the University of Michigan, who kindly went through the whole book and communicated to the author his scholarly annotations. The present edition contains such modification of the text as were necessitated by these suggestions. It is proper to add that the textual differences are not such as to interfere with the simultaneous use of both old and new editions in the class.

OUTLINES OF HISTORY.

INTRODUCTION.

1. HISTORY may be defined, in a general way, as the record of the life of mankind. In a more special view, it is the narrative of the rise and progress of those famous peoples whose doings constitute the history of *civilization*. History defined.

2. In this its proper and highest sense history presupposes the races advanced beyond the natural or primitive state, and gathered in political communities, or *nations*; and it confines itself to those nations whose achievements have influenced the *general current* of the world's affairs, and made the condition of the world what we now see it. Its relation to nations.

3. Respecting mankind outside of *nations*, there is much interesting and valuable knowledge, supplied by various sciences. Among these are, — Aids to history.

ETHNOL'OGY, or the science of the several races, or types of mankind.

ARCHÆOL'OGY, or the science of the ancient works of man.

PHILOL'OGY, or the science of language.

By the aid of these sciences much is now known regarding humanity in its lower stages of progress. In our own times a vast amount of inquiry has been made into the condition of the primeval races; interesting studies have been made also on the customs, manners, arts, languages, and religions of savage tribes.

4. These researches belong to ANTHROPOLOGY, which deals with man in *natural history*, rather than to HISTORY proper, which deals with nations, that is to say, with man in *civilization*.

Difference between Anthropology and History.

5. Viewing history as confined to the series of leading civilized nations, we observe that it has to do with but one grand division of the human family, namely, with the Caucasian, or white race. To this division belonged the people of all the elder nations, — the Egyptians, Assyrians and Babylonians, the Hebrews and the Phœnicians, the Hindoos, the Persians, the Greeks, and the Romans. Of course, the modern European nations, as also the states founded by European *colonists*, all belong to this ethnological division. Thus we see that history proper concerns itself with but one highly developed type of mankind; for though the great bulk of the population of the globe has, during the whole recorded period, belonged, and does still belong, to other types of mankind, yet the Caucasians form the only truly *historical* race. Hence we may say that civilization is the product of the brain of this race.

Of the peoples outside of the Caucasian race that have made some figure in civilization, the Chinese, Mexicans, and Peruvians stand alone. But though those races rose considerably above the savage state, their civilization was stationary, and they had no marked influence on the general current of the world's progress.

6. Modern scholars divide this historical stock — the Caucasian race — into three main branches: Its three divisions.

I. The Aryan, or Indo-European branch; II. The Semitic branch; III. The Hamitic branch. This classification is a *linguistic* one, — that is to say, it is a division based on the nature of the languages spoken by the three families of nations, — but at the same time it represents three distinct civilizations.

7. The Aryan branch is that division to which we ourselves belong: it includes nearly all the present and past nations of Europe, — the Greeks, Latins, Germans or Teu'tons, Celts, and Slavo'nians, — together with two ancient Asiatic peoples, namely, the Hindoos and the Persians. The Aryans.

8. The evidence of language shows that the Celtic, German, Slavonian, Greek, and Latin tongues all bear a remarkable family likeness, and that they share this likeness with the Sanscrit, which was the ancient language of India, and with the Zend, the ancient language of Persia. It is quite certain that the forefathers of the Persians and of the Hindoos and the forefathers of all the European nations were once one people, and lived together somewhere in Western Asia. This was at a time long before the beginning of recorded history (for we know nothing of the Greeks, Latins, Germans, Celts, etc., *as such*, until we find them in *Europe*); but still it is proved by the evidence of language that their original home and native seat was Asia. Their unity,
how proved.

9. The Semitic branch includes the ancient inhabitants of Syria, Arabia, and the Tigris and Euphrates countries. The leading historical representatives of the Semitic branch are the Hebrews, Phœnicians, Assyrians, and Arabs. Semites.

10. The Hamitic branch has but one prominent representative, — the Egyptians. It is probable, however, that the ancient Chaldæ'ans also belonged to this race. Hamites.

11. The history of the civilized world is the history of the Aryan, Semitic, and Hamitic races. It is of interest to know that the race to which we belong, the Aryan, has always played the leading part in the great drama of the world's progress. The Hamitic nations, the Egyptians and Chaldæans, though they devel- Comparison of
the races.

oped a peculiar type of civilization, yet grew up and remained in a great degree *apart* from the rest of the world, having no considerable influence on the main current of history. As to the Semites, there is one respect in which they have the greatest place in the story of mankind, namely, in religious development; for the three religions that have taught men that there is but one God — namely, the Jewish, the Christian, and the Mahom'etan — have all come from among them. But, aside from this, the Semites do not make nearly so important or so conspicuous a figure in history as do the Aryans, or Indo-Europeans. They have never been greatly progressive. They have generally shown a conservative disposition that has, in the main, kept them fixed to their native seat, in the small tract of country between the Tigris, the Mediterranean, and the Red Sea. Thus they have not, like the Aryans, been the planters of new nations; and they have never attained a high intellectual development, or that progress in political freedom, in science, art, and literature, which is the glory of the Aryan nations.

12. If we trace back the present civilization of the advanced nations of the world, — our own civilization, and that of England, Germany, France, Italy, etc., — we shall find that much of it is connected by direct and unbroken line with the Roman. The Romans, in turn, were heirs of the Greeks. Now, all this is *Aryan*; and when we go back to the primitive age of the undivided Aryans in Asia, we see that this race must even then have been placed far above the condition of mere savages, and that they had made good beginnings in government, and social life, and religion, and the simple mechanical arts. Thus we are fully authorized to say that the Aryans are peculiarly the race of *progress*; and a very large part of the history of the world must be taken up with an account of the contributions which the Aryan nations have made to the common stock of civilization.

The Aryans in history.

13. In these Outlines of the world's history we shall take up:—

I. The groups of ancient Oriental nations, Divisions of
this book.
including, 1. The Egyptians; 2. The Assyro-Babylonians;
3. The Hebrews; 4. The Phœnicians; 5. The Hindoos; 6.
The Persians.

II. The history of Greece.

III. The history of the Roman Dominion.

IV. The history of the Middle Ages.

V. The history of the modern European states and nations.

14. The entire historical period, commencing with the early Empires of the East, and coming down Chronologic
periods.
to our own times, is usually divided into distinct portions, sometimes two and sometimes three; that is to say, some historians make a double division, into *Ancient* history and *Modern* history; and others a triple division, into *Ancient*, *Mediæval*, and *Modern* history. In either case *Ancient* history ends with the breaking up of the Dominion of Rome, in the fifth century A. D. (fall of the Western Roman Empire, 476 A. D.). Then, if we make the *double* division, MODERN history will begin with the downfall of Rome; but if the *triple* division, the interval from the fifth to the fifteenth century will be regarded as a period by itself, called MEDIÆVAL history, or the history of the Middle Ages; while MODERN history, according to this method, will be confined to the centuries between the fifteenth and the present time.

15. Such divisions of the historic period into portions are merely arbitrary, seeing that history forms Nature of the
divisions.
in reality an unbroken whole. We shall adopt the triple division for practical convenience, though perhaps the double division is the more philosophical; for while we think of the ages as forming a continuous stream, the Roman Dominion may still be regarded as a *reservoir*

into which all the currents of history from the anterior ages were gathered, and from which, in turn, the ampler currents of Modern history have flowed. It was out of the breaking up of the great Dominion of Rome in the fifth century A. D. (when the Western Roman Empire fell, under the attacks of the Gothic invaders, and of other new races loosely called "Northern barbarians") that the modern states of Europe—that is, Italy, Spain, France, England, Germany, etc.—gradually took their rise.

16. In the largest sense, however, history is a *unit*: its epochs form but acts in one grand Providential drama; one thread of progress binds nation to nation; and, looking at humanity as a whole, we see that

THROUGH THE AGES ONE INCREASING PURPOSE RUNS,
AND THE THOUGHTS OF MEN ARE WIDENED WITH THE PROCESS OF
THE SUNS.

MODERN HISTORY, from the close of the 15th century to the present time.

SECTION I.

THE ANCIENT ORIENTAL MONARCHIES.

CHAPTER I.

GEOGRAPHICAL SKETCH.

1. THE ancient Oriental civilizations to be treated of in this section comprise the monarchies of Egypt, Assyria and Babylonia, Judæa, Phœnicia, India, and Persia.

2. With the single exception of Egypt, the seat of all the ancient Oriental nations was in Asia. And of this grand division of the globe it is to be observed that only a small part has any connection with history proper. Historical Asia is in reality *Southwestern Asia*.

3. All that part of Asia north of the Altai range is a comparatively barren waste. It was almost wholly unknown in antiquity.

4. Central Asia, extending between the 50th and the 40th parallels of north latitude, — known to ancient writers as *Scythia*, — is a region of vast plateaus. Being destitute of arable land, it is a mere country of pasture. It has always supported a great population, but a population of nomads without fixed habitations or cities, and with no other form of political association than patriarchal government. Accordingly, the races of this region have played no part in history, except that the Mongolian or Tartar races, inhabiting the great steppes, have at times poured down upon and conquered the civilized countries.

5. The real theater of Asiatic history, namely, South-western Asia, may be subdivided into three Division of Western Asia. regions: 1. that west of the Euphra'tes; 2. the valleys of the Euphrates and Ti'gris; 3. the region between the Zagros Mountains and the In'dus basin inclusive.

6. West of the Euphrates we have: 1. The peninsula of Asia Minor, the seat of several nationalities (of which that of Lyd'ia was the most important) First region. and of various Grecian colonies; their history is, however, connected as much with Europe as with Asia. 2. Syr'ia, bordering on the eastern shore of the Mediterranean Sea, and comprising three distinct parts: (1) Syria proper; (2) Phœnicia, including the narrow strip of coast between Leb'anon and the sea; (3) Pal'estine, south of Phœnicia. 3. The peninsula of Arabia, stretching southeastward. This last is of comparatively little importance in ancient history.

7. In the basins of the Tigris and the Euphrates were several distinct territorial divisions: 1. Arme'nia, or the highland region between Asia Minor Second region. and the Caspian Sea. 2. Assyria proper, which lay east of the Tigris River and west of the Zagros Mountains. 3. Babylonia, comprising the great alluvial plain between the lower course of the Tigris and of the Euphrates, and stretching westward to the Syrian Desert. 4. Chaldæ'a, the country at the head of the Persian Gulf, stretching westward from the lower waters of the Euphrates to the Syrian Desert. 5. Mesopota'mia, or the district between the two great rivers. 6. Susia'na, including the country lying along the Tigris east of Babylonia.

8. It must not be supposed that these territories were severally the seat of distinct nations. We may Nations in second region. say that three great monarchies ruled in the valleys of the Tigris and Euphrates, down to the time when these territories were absorbed in Persia (6th century B. C.). These were the Chaldæan, Babylonian, and Assyrian king-

doms; and of these the last, at the height of its power, held sway over nearly the entire region between the Zagros Mountains and the Mediterranean Sea.

9. The table-land of ancient Iran (Persia) lay to the east of the Zagros chain of mountains, which separated it from the Tigris and Euphrates basins. In the north, toward the Caspian Sea, was Media; to the south, and reaching to the Persian Gulf, was ancient Persia proper. Farther eastward, and stretching to the south, was the peninsula of India, forming the eastern limit of ancient Asiatic civilization.

10. The earliest nations recorded in history arose in the three alluvial plains of the Nile, of the Tigris and Euphrates, and of the Indus. This fact was wholly due to physical causes. In a primitive state of society, population can gather into nations only in regions where a fertile soil produces abundant food. Now the three alluvial basins just named are distinguished for their extraordinary fertility. Here nature spontaneously produces certain important articles of food, such as dates, rice, etc., which, being easily cultivated and yielding immense returns, made a large population possible. Accordingly, we find that in these countries men had adopted fixed habitations (a great advance on the pastoral or nomad state) and formed themselves into political associations at a time long antedating recorded history.

11. As the physical conditions that favor the formation of human society are, so far as the Old World goes, found only in the alluvial plains of Southwest Asia (taking in Egypt), as the earliest nations appear in these regions, and as philology proves that all the European races came from Western Asia, — we may safely consider that *here* was, if not the cradle of the human race, at least the cradle of *civilization*.

12. We shall begin with these earliest nations of civilized

man. With the origin of the human race, its first seats and earliest distribution, history proper does not undertake to deal. History commences when historical records commence. Hence we must leave to revelation and to science the consideration of primitive humanity, and take up our studies with those ancient Oriental nations that appear on the stage of human affairs when historic records begin.

13. When the curtain goes up on antiquity, — say in the 23d century B. C., — we have disclosed to view the venerable figures of two civilizations: that in the Nile Valley and that in Chaldæa. And beyond this narrow region the fore-world is to us shrouded in impenetrable darkness.

CHAPTER II.

EGYPT.

I. HISTORICAL OUTLINE.

THE GREAT PYRAMIDS.

14. EGYPT is the country in which we first find a government and political institutions established. Antiquity of Egypt. Egypt itself may not have been the oldest nation, but Egyptian history is certainly the oldest *history*. Its monuments, records, and literature surpass in antiquity those of Chaldæa and India, the two next oldest nations.

15. It is natural to suppose that the banks of the Nile must have been one of the primitive seats of human society, for the condition already mentioned as favoring the first formation of nations—namely, cheap and abundant food—was here present in a remarkable degree. Why old.

16. Egypt itself has been called from the earliest antiquity "the

Physical geography.
Gitt of the Nile."

This mighty river, flowing from the highlands of Abyssinia and the great lakes of equatorial Africa, forms in Egypt a strip of fertility in the midst of the desert waste. In its annual overflow (due to the immense rainfalls in the Abyssinian mountains), the Nile, by its mud deposits, renews every year the soil of this strip, so that all the people had to do was to plant, and nature produced.

17. In Egypt the date-palm Food-plants. grew spontaneously, and furnished the people with a cheap and abun-

MAP STUDY.

Ancient Egypt comprised three divisions, — Lower Egypt, or the Delta; Middle Egypt, or the Heptanomis; Upper Egypt, or the Thebais.

1. In which division was Memphis? 2. On which bank of the Nile was Memphis? 3. In which division was Thebes? 4. Near which city are the Great Pyramids? 5. What seaport at the mouth of the eastern branch of the Nile? 6. Where was the land of Goshen? 7. What sea north of Egypt? 8. What is the general course of the Nile? 9. What sea east of Egypt? 10. What celebrated mountain in this vicinity?

dant article of food. The fertility of the soil also yielded, with slight labor, large crops of cereals (especially *dhourra*, a sort of maize), and the "granaries of Egypt" were the storehouse whence all the peoples of the Mediterranean were wont to draw supplies in seasons of scarcity.

18. The cheapness of living in Egypt led to a great multiplication of the population. A Greek writer, Effect on the people. Diodo'rus Sic'ulus, who traveled there nineteen centuries ago, says that to bring up a child to manhood did not cost more than twenty drachmas (less than four dollars of our money), — and he notices this fact as a cause of the populousness of Egypt.

19. Information in regard to ancient Egypt was, until the present century, derived chiefly from the nar- Old sources of information. ratives of the Greek historians, and especially from that of Herod'otus,* who traveled in Egypt in the 5th century B. C., and from some fragments of a history written in Greek by Man'etho, an Egyptian priest, in the 3d century B. C.

20. But in modern times our knowledge of the ancient land has been greatly extended by the discov- The new sources. ery of the art of reading the inscriptions which the Egyptians of old with great lavishness carved on their buildings and monuments, especially their obelisks, painted on the frescoed interiors of their tombs, and indeed placed on almost every object of use or art. These writings were in the character called *hieroglyph'ics*, which is a Greek term meaning sacred carvings, or priestly writing. Now, the knowledge of the reading of these died out with the decline of Egypt, and "hieroglyphics" became a synonym for everything that is mysterious.

21. It was an interesting accident that led to the unveil- Deciphering of the hieroglyph-ics. ing of this mystery. During the expedition of the French to Egypt, under Napoleon, at the

* Herodotus, called the father of history, was born at Halicarnassus, a Greek colony in Caria (Asia Minor), B. C. 484.

close of the last century, an engineer in digging the foundation of a fort near the Rosetta mouth of the Nile found a stone tablet about three feet long, on which was an inscription in three different characters. This was the famous "Rosetta stone." One of the three texts (the lower one) was Greek, and of course was readily translated ; the text at the head was in the mystic hieroglyphic character ; the intermediate text was in a character since called *demotic* (*demos*, the people), that is, the writing of the common people. This inscription was copied and circulated among scholars, and after long and ingenious efforts the alphabet of the hieroglyphics was made out ; so that now these carvings are read with ease and certainty, and a new flood of light has been thrown on the history of ancient Egypt.

NOTE ON THE ROSETTA STONE. — The Greek text, when translated, showed that the inscription was an ordinance of the priests decreeing certain honors to Ptolemy Epiphanes on the occasion of his coronation. 196 B. C. (Ptolemy Epiphanes was one of a line of Greek sovereigns who ruled over Egypt from the time of its conquest by Alexander, 4th century, to the 1st century B. C.) It contains a command that the decree should be inscribed in the sacred letters (hieroglyphics), the letters of the country (demotic), and Greek letters, — and this for the convenience of the mixed population of Egypt under its Greek rulers. It was natural to conclude that the three texts were the same in substance, and accordingly earnest efforts were made to decipher the hieroglyphics by aid of the Greek. The first clew was obtained by noticing that certain groups of the hieroglyphic characters were inclosed in oval rings, and that these groups corresponded in relative position with certain proper names, such as Ptolemy, etc., in the Greek text. The following line presents a few of the characters with a group in the oval ring. (The words and groups of words are read from *right to left*.)

(Ptolemy eternal beloved of Phtah)

of Egypt king of

statue

raising

It was by comparison of the group judged on strong grounds to be the name Ptolemy, with another group (found on another stone) supposed to stand for the name Cleopatra, that the first great advance was made. The groups were as follows : —

Supposed to be *Ptolemy*.

Supposed to be *Cleopatra*.

In Greek Ptolemy is *Ptolemaios*, and Cleopatra is *Kleopatra*. If now the hieroglyphic characters were *letter-signs*, the characters 1, 2, 3, 4, in Ptolemaios should correspond respectively with 5, 7, 4, 2, in Kleopatra (the *first* letter in Ptolemaios being the *fifth* in Kleopatra, etc.). In this way several letters were discovered ; by means of other groups the whole alphabet was made out, and finally it was proved that by this phonetic alphabet the characters and groups could be resolved into the Coptic language of Egypt, which was already understood by scholars. It should not be forgotten that the great work of deciphering was mainly effected by the French savant, Champollion.

22. The Egyptians were not *Africans*, as we understand that term. They belonged to the Caucasian Egyptian race. Still, they were neither Aryans nor Semites, and hence scholars call them by a special designation, namely, *Hamites*, or *Khamites*.* They bore a greater resemblance to the ancient Chaldæans than to any other Asiatic people ; both peoples showed a wonderful building instinct, and the Egyptian language seems to be a sort of primitive Semitic. Hence some scholars believe that the Egyptians were originally immigrants into the Nile Valley from the alluvial plain at the head of the Persian Gulf ; but if this was the case, the Egyptians must have left

* *Khamé* (literally the Black Land) was the native name of Egypt.

Asia at a period before there was that sharp division of Semites and Aryans which we find in historical times.

23. The origin of Egyptian civilization is hidden in the darkness of antiquity; but by the aid of certain ascertained facts we may establish at least an approximate starting-point. Thus, it is known that Abraham visited Egypt in the 20th century B. C., and that he then found a flourishing monarchy existing. Now at this remote period the Great Pyramids were standing, and modern scholars are agreed that these structures were reared by kings of the fourth dynasty,—at a time not later than the middle of the 25th century B. C. It is evident from the monuments that the civilization of Egypt at this early date was in many respects of an advanced order, and hence we must seek its origin still farther back. But *how* far back? According to the native historian Manetho, twenty-six dynasties of kings ruled the country from Me'nes, the first king of the first dynasty, down to the conquest of Egypt by the Persians in the 6th century B. C. The accession of Menes is placed by some scholars (as Bunsen) at 3906; others bring it down as late as 2700. Later than that date we cannot bring it, and it would doubtless be quite correct to say that Egypt was a civilized country three thousand years before the Christian era.

24. The history of Egypt from the first dynasty (2700 B. C.) down to the destruction of Egyptian independence by the Persians (525 B. C.) may be divided into three periods, namely:—

The three periods.

I. First Period (or period of the old empire), from the earliest times (say 2700 B. C.) to 2080.

II. Second Period (or period of the Hyk'sos rule), from 2080 to 1527.

III. Third Period (or period of the new empire), from 1527 to 525.

25. The First Period begins with the first dynasty (2700

B. C.), and lasts for 620 years; but it cannot be said that authentic Egyptian history commences until the fourth dynasty, about the middle of the 25th century B. C. And indeed the epoch of the fourth dynasty is the most notable during the whole of this First Period; for this was the era of the pyramid-builders. Manetho ascribes the building of the Great Pyramid at Gizeh [*gee'zeh*] near Mem'phis to *Suphis* (the *Cheops* of Herodotus); and it is an interesting fact that in the interior of this structure has been found a hieroglyphic royal name which scholars agree in reading *Shufu*.^{*} The center of the Egyptian power was then at Memphis, in Lower Egypt, where a centralized monarchy ruled the whole country; and it is apparent that at this epoch the Egyptians had made very considerable progress in the arts of life. Before the close of the First Period, however, Egypt was broken up into really separate kingdoms, the monarchy which ruled at Thebes in Upper Egypt being the most powerful. This left the country in so feeble a condition that it was invaded by a foreign enemy, namely the Hyksos, or Shepherd Kings. And with their conquest of Egypt (2080 B. C.) closes the First Period, or Old Empire.

26. The Second Period is the era covered by the rule of the Hyksos, or Shepherd Kings, and lasts for about five centuries (2080–1525 B. C.). The Hyksos are believed to have been a nomadic race from either Syria or Arabia. Entering Lower Egypt, they destroyed the native monarchy at Memphis, and afterwards conquered the Theban Kingdom of Upper Egypt. The complete establishment of their dominion was about 1900 B. C., and after this follows the darkest period of Egyptian history.[†]

* For a representation of the signet-ring of Cheops, or Shufu, see picture of the Pyramids at the head of the chapter.

† It was during the rule of one of the dynasties of Shepherd Kings

27. The revival of Egyptian independence by the expulsion of the "Shepherds" introduces us to the Third Period, or that of the New Empire. Third Period.
This continues for about one thousand years (1527-525 B. C.); but it should be divided into two ages,—the grand age and the age of decay.

28. The expulsion of the Hyksos was due to the valor of a Theban prince, who headed a great national uprising, and who received as his reward The grand age.
the supreme authority over the whole country,—a right which was inherited by his successors. Egypt now became one great centralized power, with Thebes for its capital. The most splendid period of Egyptian history was from the eighteenth to the twentieth dynasties,—about three centuries (1525-1200 B. C.).* Egyptian art attained its highest perfection, and the great temple-palaces of Thebes were built. The Egyptians even undertook foreign expeditions: Ethiopia, Arabia, and Syria were invaded; the Euphrates was crossed, and a portion of Mesopotamia was added to the Egyptian Empire. The chief of these warlike kings was Ram'ses II., the *Sesos'tris* of the Greek writers.

29. From the twentieth dynasty onwards Egypt declined for six centuries, till finally it was conquered Age of decay.
by the Persians under Camby'ses, 525 B. C. In 332 Egypt fell under the dominion of Alexander the Great, who founded on its shore the new capital and literary and commercial center called Alexandria. One of his generals, named Ptolemy, received Egypt as his fragment of

that Abraham visited Egypt,—said to be 1920 B. C.,—and they were still reigning when Jacob and his sons settled in the country, 1706 B. C.

* At the head of the eighteenth dynasty is supposed to have been that Pharaoh "who knew not Joseph." The exodus of the Israelites from Egypt is believed to have taken place 1320 B. C., during the reign of Meneptha, the fourth king of the nineteenth dynasty,—the Pharaoh whose heart was hardened, and who was drowned in the Red Sea.

the divided empire of Alexander, 323 B. C. Thenceforward for three centuries the Greek dynasty of the Ptolemies ruled on the banks of the Nile till Queen Cleopa'tra, the last of the line, being overcome by the Romans, died by her own hand; and the venerable land became a Roman province in B. C. 30. (See under the history of Rome, p. 178.)

2. EGYPTIAN CIVILIZATION.

30. In *government*, Egypt was a hereditary monarchy, but the kingly rule took a peculiar form, owing to
Government. the extraordinary power of the priestly class. Unlike the sovereigns of the East, an Egyptian Pharaoh was far from being the unquestioned master of his own actions: his public duties and his daily habits of life were prescribed by religious rule; so that the priestly class formed the "power behind the throne." In another respect an Egyptian king differed from an Eastern despot: his power over the lives and property of his subjects was strictly limited by law, and nothing left to caprice and passion. The right to enact new laws, however, resided with the sovereign.

31. The station in life of every man was fixed by an institution named *caste*. By the system of caste,
Caste. each individual, instead of being able to make his own place and fortune in the world, had his lot marked out by his birth: he had to be what his father was. Of these castes, or ranks, there were three broad divisions,—the priests, the soldiers, and the lower orders.

32. The priests were the richest, most powerful, and most influential order. It must not be supposed,
Priests. however, that the modern word "priest" gives the true idea of this caste. Its members were not limited to religious offices; they formed an order *comprising many occupations and professions*. They were distributed all over the country, possessing exclusively the means of reading

and writing, and the whole stock of medical and scientific knowledge. Their ascendancy, both direct and indirect, over the minds of the people was immense, for they prescribed that minute religious ritual under which the life of every Egyptian, not excepting the king himself, was passed.

33. Next in importance to the sacerdotal or priestly order was the military caste, numbering about 400,000. To each man of this soldier-caste Warriors. was assigned a portion of land ($= 6\frac{1}{2}$ acres) free from any tax; but he could not engage in any art or trade. The lands of the priests and soldiers were regarded as privileged property; while the rest of the soil was considered as the property of the king, who rented it to cultivators, receiving from them one fifth of the produce.

34. Widely separated from the priests and warriors were the various unprivileged castes. These were Lower castes. the *husbandmen*, the *artificers*, and the *herdsmen*, each caste including many different crafts and occupations. The lowest caste was that of the herdsmen, and the lowest members of this caste were the swineherds, who were not permitted to enter the temples. All the castes below the priests and soldiers agreed, however, in this, that they had no political rights, and could not hold land.

35. The effect of the caste-system was evil. It was one of the main causes of the decline of the nation. Effect of caste. It discouraged progress and improvement; it crushed out personal ambition; it produced dull uniformity.

36. The population of ancient Egypt is known to have been at least five millions, and it may have Population. been much more. As food was cheap and abundant, owing to its being easily obtained, the race increased very rapidly; hence there was a large part of the people whose labor could be used in any way the rulers wished. This fact accounts for the ease with which great public works — works that, like the pyramids, were useless,

but yet required the labor of hundreds of thousands of men for years — were constructed.

37. Herodotus relates that Egypt contained 20,000 inhabited towns. The two most famous cities
Cities. were Memphis and Thebes. Memphis was about twelve miles above the apex of the Delta. Scarcely a vestige of the place now remains ; but its great burial-place at Gizeh is still seen. Here are the great Pyramids, the colossal Sphinx, and miles on miles of rock-hewn tombs. Thebes was the metropolis of Upper Egypt, and the most splendid city of the Nile. The traveler who now views its ruins at Kar'nak and Lux'or beholds pillared temples and statues of a size so colossal as to seem like the work of giant hands.

38. In some branches of art, especially in architecture,
Architecture. the Egyptians made great advances. The race seems indeed to have had a wonderful building instinct. The distinguishing feature of Egyptian architecture is its vastness and sublimity. Avenues of colossal sphinxes and lines of obelisks led to stupendous palaces and temples, elaborately sculptured, and containing halls of solemn and gloomy grandeur, in which our largest cathedrals might stand.

39. The pyramids
Pyramids. were designed as the sepulchres of kings.

RUINS OF KARNAK.

The three great pyramids of Gizeh are the most celebrated ; but as many as seventy stand on the left bank of the Nile, just beyond the cultivated ground, in the vicinity of Memphis. The largest of the three great pyramids is 450 feet high ; it has a square base of 764 feet, and it covers an area of more than 13 acres, — twice the extent of any other building in the world. The second pyramid is but little less ; the third about half the size. In the construction of these works no degree of labor for any length of time seems to have intimidated the Egyptians. The huge blocks of stone, sometimes weighing 1600 tons each, were dragged for hundreds of miles on sledges ; in one case which is known, 2000 men were employed three years in bringing a single stone from the quarry to the structure in which it was to be placed.

40. In sculpture the Egyptian artists aimed at the colossal, and never attained the beautiful. A remarkable peculiarity of Egyptian sculpture is, Sculpture. that, though the earliest monuments reveal a considerable degree of artistic skill, this skill never advanced. The explanation of this is found in the connection of Egyptian art with Egyptian religion. The artists were fettered by strict rules, and were forbidden to indulge their inventive genius.

41. Egyptian painting did not reach true excellence. The best specimens, as seen in the frescos in the interiors of the sepulchers, display brilliancy Painting. of coloring, and frequently great spirit and vivacity ; but the drawing is very inaccurate, displaying no observance of perspective or even the simplest laws of vision. It should be stated that in this branch of art, too, religion interfered to limit the taste and fancy of the painter, certain colors being positively prescribed in representing the bodies and draperies of the gods.

42. The art of writing was practiced more extensively by the Egyptians than by any contemporary nation. The

pyramids and monuments of even the earliest period bear inscriptions; and it was the custom to mark every object and article of use or ornament. For manuscripts an excellent writing material was made from the leaves of the *pa-py'rus* plant, — whence our word “paper.” Fragments of manuscripts on papyrus exist of the earliest Theban dynasties, — 2000 B. C.

43. The translation of the sacred books of the Egyptians shows that their religion embodied some grand conceptions, — among others that of the immortality of the soul, and that of the existence of an invisible God. The several attributes and manifestations of the Deity were, however, represented in various forms, and, though by the priests and other learned men these were regarded as mere symbols, they became to the ignorant separate divinities and objects of worship. In this way the religious system of the Egyptians was very complicated, the number of gods being so great that every day of the year was consecrated to one. The worship of Osi'ris and I'sis was that most generally diffused.

44. One of the most striking peculiarities of the Egyptian religion was the honor paid to brutes. The dog, the cat, the ibis, and the hawk were held in reverence throughout the whole land, — other animals were worshiped only in special *nomes*, or districts. The highest honors were paid to the bull Apis at Memphis, and to the calf Mne'vis at Heliop'olis. The sacred animals were kept in the temples, ministered to with the greatest care, and when they died they were embalmed. If a person killed an ibis or a hawk, whether intentionally or unintentionally, he was immediately put to death. Animal worship received its extraordinary extension in Egypt owing to the overwhelming influence of the priestly caste. Ultimately it was a main cause of the mental debasement of the people.

45. The practice of embalming dead bodies was connected with the peculiar religious ideas of the Egyptians. The original reason of embalming

Embalming.

was the belief that at the day of judgment the soul would reunite with the body: hence the care taken to preserve the corpse from corruption, and hence also the great pains taken to ornament the interiors of their stone-hewn sepulchers, since, even while lying in the tomb, the body was believed to be not wholly unconscious.

EGYPTIAN MUMMY.

46. The Egyptians were adepts in the finer kinds of

Arts and manufactures.

mechanical art. In the polishing and engraving of precious stones, in glass manufacture, porcelain-making, and in

embalming and dyeing, they had attained great skill. They raised flax, out of which they made fine linen (linen being their usual article of dress); they worked in metals from the earliest recorded period; their walls and ceilings they painted in beautiful patterns, which we still imitate; and in the production of articles of use and ornament they had reached a perfection that modern art has not been able to surpass.

47. It is known that the Egyptians had some acquaintance with certain sciences, especially geometry, arithmetic, astronomy, and medicine. But

Science.

their knowledge can hardly be called *science*, in the modern sense: they knew truths more as matters of fact and observation than as determined by law. For example, the Greek philosopher Pythag'oras learned from the Egyptian priests

the *fact* that "the square of the hypotenuse is equal to the sum of the squares of the two other sides"; but it was the Greek mathematician himself who discovered the *demonstration* of this principle. In accuracy of astronomical observations the Egyptians were surpassed by the Chaldæans. Their geometry was little more than land-surveying.

48. The great characteristic of Egyptian institutions was their *unchangeableness*. This stationary character is seen in Egyptian government, society, religion, art, and learning. Egypt herself was a *mummy*.

CHAPTER III.

THE ASSYRIANS AND BABYLONIANS.

I. INTRODUCTION.

49. To Egypt has been accorded the precedence of possessing the earliest secular *historic records*, but an actual antiquity hardly later than that

Antiquity of Chaldæan civilization.

CHALDÆAN TEMPLE.

of Egypt may be claimed for the civilization which arose in the Tigro-Euphrates basin. There is a positive date in Chaldæan history going back to the 23d century B. C. (2234 B. C. See ¶ 57, p. 30), while authentic Egyptian history antedates this by only two centuries (epoch of the Pyramid-builders, fourth dynasty, B. C. 2450).

MAP STUDY.

See map of Ancient Oriental Monarchies, opposite p. 8.

1. In what country do the Tigris and the Euphrates rise? 2. Where is Mount Ararat? 3. What mountain chain between the Tigro-Euphrates basin and the plateau of Media and Persia? 4. Describe the course of the Tigris. 5. Of the Euphrates. 6. Where do they unite? 7. Into what gulf do they empty? 8. Locate Nineveh; Babylon; Ur.

50. If, however, leaving profane records we take the guidance of the Hebrew Scriptures, this region will claim an even greater antiquity. The Bible places the commencement of the history of mankind in the Tigro-Euphrates basin. "And it came to pass," says the Book of Genesis, "as they journeyed from the east, that they found a plain in the land of Shi'nar;* and they dwelt there." *There* the Scriptures place the building of Babel, the first great city founded after the Deluge, and *there* occurred the confusion of tongues and the dispersion of races. It is an interesting fact that the record of this event is preserved in the Babylonian tradition, as well as in the Mosaic narrative.

51. Two great rivers, the Tigris and the Euphrates, take their rise in the highlands of Armenia, and unite near the head of the Persian Gulf, which receives their waters after the Euphrates has flowed about 1780 miles and the Tigris about 1150. The valleys of these streams interpose as a belt of fertility in the midst of the great desert zone that extends from the western coast of Africa almost to the northeastern shores of Asia.

52. The Tigro-Euphrates basin comprises a number of territorial and political divisions which it is not always easy to mark by definite lines. The region between the two great rivers was called by the Greeks Mesopotamia, and by the Hebrews Shinar. Chaldæa was the name applied to the region south of the lower course of the Euphrates, and to the head of the Persian Gulf. These we may call territorial divisions; but Babylonia, on the other hand, was a political division which took in the alluvial plain between the lower waters of the Tigris and Euphrates (Southern Mesopotamia or Shinar), and also Chaldæa southward to the Arabian desert. Again, the territorial di-

* Shinar, that is, Mesopotamia. See Map of Ancient Oriental Monarchies, opposite p. 8.

vision of Assyria Proper lay east of the Tigris and west of the Zagros Mountains, and must not be confounded with Assyria as a political power, that is, the Assyrian Empire, which varied in extent, and the name of which was often applied to the whole territory between the Mediterranean Sea and the table-land of Media and Persia. Susiana lay along the Tigris, southeast of Assyria, and was a territorial, not a national, designation.

53. The Tigro-Euphrates basin was the seat of three successive kingdoms:— 1. The early Babylo-
nian, or Chaldæan, Kingdom; 2. The Assyrian
Empire; 3. The later Babylonian Kingdom.

The three na-
tions.

54. As in the case of Egypt, our knowledge of the an-
cient history of these countries has been very
greatly enlarged through modern research.

Modern re-
search.

By the industry of explorers, beginning with Layard thirty years ago, Nineveh and Babylon and the buried cities of the plain have been unearthed; their palaces and temples have been exposed to view; the mysterious inscriptions in the wedge-shaped or *cu-ne'i-form* character, which were found covering the slabs that lined the interiors of the palaces and temples, have, by a triumph of modern scholarship, been translated; and thus a flood of light has been cast on the darkness of the primeval world.

2. EARLY BABYLONIAN, OR CHALDÆAN, KINGDOM.

55. The earliest of the three kingdoms was the Chaldæan, or Early Babylonian, which arose in the lower
part of the rich alluvial plain lying above the
Persian Gulf. Chaldæa by its natural fertility was calcu-
lated to be one of the first seats of human society. It is the only country in which wheat is known to be indi-
genous. Other cereals grew plentifully; groves of the
magnificent date-palm fringed the banks of the rivers; the

Physical de-
scription.

vine and other fruits abounded, while the rivers teemed with fish.

56. Authentic history in the Tigro-Euphrates basin, as in the Nile Valley, commences only with the formation in Chaldæa and Babylonia of one united kingdom, including previously disunited tribes under its authority. The Hebrew records name Nimrod, the son of Cush, as the founder of this kingdom; and the Book of Genesis also reveals to us the existence of a Tetrapolis, or confederation of four cities, that ruled over the Empire established by Nimrod; namely, 1. Babylon; 2. E'rech; 3. Ac'cad; 4. Cal'neh, — all of which places have been identified in modern times.

57. The primitive Chaldæans practiced the worship of the heavenly bodies. Their religion, combined with the facilities afforded by their climate and their level horizon, led them from the earliest times to the study of astronomy, in which they made very considerable progress. When Alexander the Great took possession of Babylon, 331 B. C., he found a series of astronomical observations taken by the Chaldæans for an unbroken period of 1903 years. These observations would therefore date from 2234 B. C. (331 + 1903).

58. The Chaldæans showed from the first an architectural tendency. The attempt to build a tower "which should reach to heaven," made here (Genesis xi. 4), was in accordance with the general spirit of the people. Out of such simple and rude material as brick and bitumen vast edifices, the ruins of which have recently been found, were constructed, pyramidal in design, but built in steps or stages of considerable altitude.

59. Other arts also flourished. Letters in the cuneiform, or wedge-shaped, characters were in use; and the baked bricks employed by the royal builders had commonly a legend stamped in their center. Gems

were cut, polished, and engraved. Metals of many kinds were worked and fashioned into arms, ornaments, and im-

BABYLONIAN BRICK.

plements. Delicate fabrics were manufactured by their looms. Commerce was carried on with other countries, and the "ships of Ur" traded along the shores of the Persian Gulf.

60. The site of Ur is believed to have been identified with certain mounds and ruins on the banks of the lower Euphrates. This place is interesting in connection with Abraham, who was born at "Ur of the Chaldees." The period of Abraham is usually put at about two thousand years before the Christian era. The belief is that Chaldæa contained at this time a Semitic population which professed a pure form of religion, in the midst of the idolatrous Chaldæans; and hence Abraham, who was a Semite, emigrated with his family and flocks and herds to the land of Canaan.

61. The Chaldæan monarchy continued for several centuries; but about the 13th century B. C. it took a secondary position, and the newly arisen Assyrian nation became the dominant power of Mesopotamia.

3. ASSYRIA.

62. The Assyrians are believed to have been a Semitic population who originally lived in Chaldæa, but who at an early period removed to the upper course of the Tigris. Here there grew up a kingdom which at first was subject to the Chaldæan ruler at Babylon, but which finally, about 1250 B. C., became independent. Assyria advanced rapidly and completely overshadowed Babylonia; and for six centuries, down to the fall of Nineveh, 625 B. C., was the great *imperial power* of Western Asia.

63. The six centuries of Assyrian history may be divided into two periods. The first period is from the independence of Assyria (about 1250 B. C.) to the foundation of the New Assyrian Empire under Tig'lath-pi-le'ser II., 745 B. C.; the second is from the accession of Tiglath-pileser II. to the fall of Nineveh, 625 B. C.

Two periods
of Assyria.

64. Among the famous monarchs of the first period were Tiglath-pileser I. (1130 B. C.), a conquering prince, and Asshur-idanni-pal (the original of Sardanapalus, but wholly unlike that mythic king), to whose time belong the winged bulls and lions and the sculptured palace-walls which have been dug from the ruins of Calah. Towards the end of this period Nabonas'sar, the ruler of Babylon, not only made himself independent, but gained a certain supremacy over Assyria. The date of this event, 747 B. C., is known as the "era of Nabonassar." In 745 B. C., however, the authority of Assyria was revived by Tiglath-pileser II., with whose accession begins the second period of Assyrian history. This monarch was a great conqueror, as were also his successors, Sargon and Shalmaneser IV. ; but the most splendid reign during the second period was that of Sennach'erib (705 - 681 B. C.), who made extensive conquests, and was the builder of magnificent structures at Nineveh. This second period was the golden age of Assyrian art.

Chief events.

65. The countries included within the limits of Assyria, at the height of its glory, were Babylonia (covering all the territory of the *early* Chaldaean Kingdom), Mesopotamia, Media, Syria, Phœnicia, a large part of Palestine, Arabia, and Egypt. Under the Assyrian rule the subject states were generally allowed to retain their own government, but their kings were compelled to do homage and pay tribute to the Assyrian monarch as the "king of kings."

Extent of the Empire.

66. The vast empire of Assyria was never more than a loosely tied bundle of petty states. The records of the kings, engraved on slabs and cylinders, reveal a constant succession of revolts, wars, subjugations, and deportations of whole populations. Thus Assyria had no inherent strength, and after culminating in the 7th century it began rapidly to fall in pieces.

Cause of decay.

67. In the 7th century Babylon made a successful rebel-

lion ; and when the Median conqueror Cyax'ares led a force from beyond the Zagros chain to attack Assyria, he was joined by the Babylonians under Nabopolas'sar, the Assyrians were overthrown, Nineveh was captured, its splendid palaces and temples were given to the flames, and Assyria fell, never to rise again, 625 B. C.

68. Nineveh was rather an assemblage of fortified palaces and temples, interspersed with clusters of meaner dwellings built of sun-dried bricks, than what is now understood by a city. For about sixty miles mounds of ruins dot the banks of the Tigris : these doubtless formed part of Nineveh ; but the heart of the vanished city seems to be represented by the mounds that are opposite the modern town of Mosul. So complete was its demolition, that even in the 4th century B. C., — time of Alexander the Great, — almost every vestige of it had disappeared.

69. Summing up what the Assyrian people contributed to civilization, we find that their genius took mainly the form of art and manufactures. In

letters and in science they were behind both the Chaldæans and the Egyptians. Architecture was their chief glory, and the palaces of Nineveh must have been of extraordinary splendor. Their sculpture, too, though never attaining Grecian purity and perfection, was far in advance of Egyptian stiffness and conventionalism : it displays a wonderful grandeur, dignity, boldness, and strength.

70. In the useful and mechanical arts, they had reached great skill. They not only had transparent glass, but even lenses; they were well acquainted with the principle of the arch, and constructed tunnels, aqueducts, and drains; they knew the use of the pulley, the lever, and the roller; they understood the arts of inlaying, enameling, and overlaying with metals; they cut gems with the greatest skill and finish, and in the ordinary arts of life they were, twenty-five centuries ago, nearly on a par with the boasted achievements of the moderns.

The arts.

4. LATER BABYLONIAN KINGDOM.

71. During the six centuries of Assyrian dominion, — 1250 to 625 B. C., — Babylon had been partially eclipsed; but the ancient Chaldæan or Babylonian nation never entirely lost its spirit of independence. When Assyria was overthrown by the Medes, 625 B. C., Nabopolassar, who had aided the Medes, received as his share of the spoil the undisputed possession of Babylon.

Political situation of Babylon.

72. This later Babylonian Kingdom lasted for 87 years (625–538 B. C.), till overthrown by the new conquering power of Persia.

Extent of history.

73. Nabopolassar, the first monarch of the new Babylonian Kingdom, was succeeded by his son Nebuchadnezzar, under whom the empire reached its height of glory. Having in early life proved the sharpness of his sword upon Egypt, this king, during his long reign of forty-three years, undertook other wars, in which the siege of Tyre and the siege of Jerusalem stand out as conspicuous achievements. Besides his conquests, Nebuchadnezzar distinguished himself by almost entirely rebuilding the city of Babylon. With his “unbounded command of naked human strength,” he applied himself to those

Nebuchadnezzar.

works which afterwards called forth his celebrated boast: "Is not this Great Babylon, that I have built for the house of the Kingdom, by the might of my power, and for the honor of my majesty?"

74. Babylon was a square city at least five times as large as London, and traversed diagonally by the Euphrates. Its walls — 338 feet high and 85 feet thick — were studded with towers and pierced with brazen gates. Its palaces and its hanging gardens — a system of terraces in imitation of mountain scenery, formed to please Nebuchadnezzar's Median queen — were among the wonders of the world.

75. Nebuchadnezzar was followed by four kings, the last of whom was Nabona'dius. This monarch had made his son Belshaz'zar the partner of his throne, and it is the name of Belshazzar that appears in the Scriptures in connection with the capture of Babylon.

76. At this time a new power appeared from beyond the Zagros Mountains. This power was the conquering army of the newly risen dominion of Persia. Under the command of the great Cyrus the Persians had gained ascendancy over the Medes and begun a career of conquest. Appearing in Mesopotamia, they laid siege to Babylon, which was entered by diverting the course of the Euphrates, 538 B. C. Herodotus states that Babylon was taken "amid revelries," — thus confirming the account given in the Scriptures of the circumstances of the capture. The fearful handwriting on the palace wall, and the terrible denunciation of the prophet, form a scene too deeply impressed on our memories to need repetition here.

77. In the fall of Babylonia the last of the three Mesopotamian kingdoms disappears from the stage of history. Conquered by the Persians in the 6th century, Assyria and Babylonia became, two centuries

later, a part of the vast possessions of Alexander the Great. Alexander designed Babylon to be the capital of his empire, and was preparing to restore its ancient splendor when he was prematurely cut off. Thenceforth its decay was rapid, and it is now a vast heap of ruins, tenanted only by the beasts and birds that love to haunt solitary places.

78. The Babylonians were a mixed race, partly Hamites and partly Semites, and in some of their traits they differed from the Assyrians. Their “wisdom and learning” are celebrated both by the Jewish writers and by the Greek historians. They were careful observers of astronomical phenomena, and they had made considerable advance in mathematics. In science the Greeks confessed themselves the disciples of Babylonian teachers.

79. They were eminently a commercial people: their land was a “land of traffic” and their city a “city of merchants.” The looms of Babylon were famous for the production of textile fabrics, especially carpets and muslins; and these were exchanged for the frankincense of Arabia, for the pearls and gems of India, for tin and copper from Phœnicia, and for the fine wool, *lapis lazuli*, silk, gold, and ivory of the far East.

CHRONOLOGIC SUMMARY.

	B. C.
First authentic date in Chaldæan history	2234
Chaldæan subjection and Assyrian independence	1250

Era of Nabonassar	747
Assyrian revival under Tiglath-pileser II.	745
Overthrow of Assyria by the Medes under Cyaxares	625
Later Babylonian kingdom established	625
Accession of Nebuchadnezzar	604
Capture of Babylon by Cyrus	538

CHAPTER IV.

THE HEBREWS.

80. JEWISH history is the subject of particular study in connection with the Scriptures. Hence no detailed account of this people is required in this work. All that need be done is to indicate the few *general* points of contact with the world's history.

Sacred history.

81. The Hebrews were a pure Semitic race, and hence were kinsmen of the Phœnicians, Arabs, and Assyrians. According to the Scriptures, the father of this people was Abraham, who in the 20th century B. C. removed from the plains of Mesopotamia to Canaan, the "promised land."

The race.

82. The history of Abraham, and of his sons and grandsons, is simply the story of a nomad family ; and it is not till the time of the departure of the children of Israel from Egypt that Jewish national history begins. This event is supposed to have taken place in 1320. The interval between that event and the absorption of Judæa in the Roman Empire may be divided into four periods :—

Period of Jewish history.

I. From the Exodus to the establishment of the monarchy under Saul, 1320 – 1095 B. C.

II. From the establishment of the monarchy to the separation of the two kingdoms, 1095 – 975 B. C.

III. From the separation of the kingdoms to the Babylonian captivity, 975 – 586 B. C.

IV. From the Babylonian captivity to the absorption of Judæa by Rome, 586 – 63 B. C.

83. During the first period the Hebrew government was a *theocracy* (or a government of God), the divine will being

manifested through the high-priest. For the conduct of affairs there was a succession of rulers and "Judges"; these were designated to their office by revelation from heaven, and they were obeyed by common consent, but they claimed no honors of royalty. The last of this line of rulers was the prophet Samuel.

First Period.

84. The second period of Jewish history includes the era of the united monarchy, and it continues during three reigns. The first of the kings was Saul, who after a stormy reign of forty years was

MAP STUDY.

Name the seaports. 10. Locate Jerusalem; Samaria; Tadmor.

succeeded by his son-in-law, David. This monarch, the greatest who ever ruled the nation, conquered Jerusalem from the Jeb'usites, and made it the seat both of the national government and religion. By his wars David extended his dominion from the Red Sea to the Euphrates, and subdued the Philis'tines and other Syrian tribes. His son Solomon succeeded him in 1015 B. C.

85. Under Solomon (1015-975 B. C.), the Israelites became the paramount race in Syria, and the Jewish state was a real imperial power. At this time it had relations both with Egypt and Phœnicia; Solomon shared the profits of Syrian commerce, and married the daughter of a Pharaoh.

86. A third period, one of decline, set in immediately after the reign of Solomon. The subject states threw off the Jewish yoke; disunion took place among the Jews themselves, and the imperial power crumbled into two petty kingdoms,—that of Israel (capital at Samaria), composed of ten out of the twelve tribes, and that of Judah (capital at Jerusalem), made up of the other two.

87. The kingdom of Israel lasted for about 250 years. It was finally overwhelmed by Sargon, king of Assyria, and the ten tribes were carried into captivity, 721 B. C. The kingdom of Judah continued more than a century afterwards; but Jerusalem was captured by Nebuchadnezzar, king of Babylon (586 B. C.), the population of Judah were torn from their homes to pine in Babylon, and the history of the Jews ceased for seventy years. The triumph of Cyrus over Babylonia was followed by an edict by which the Jews were restored to their homes (536 B. C.).

88. The interval between the return from captivity to the conquest of the Romans forms the Fourth Period of Jewish history. During this time

the nation underwent many vicissitudes. First it formed a satrapy or province of the Persian Empire; then, in 332 B. C., it came under the sway of Alexander the Great, and for a hundred years after his death it was ruled by the Ptolemies of Egypt. The Greek language now became common in Judæa, and the Septuagint Version of the Pentateuch was prepared in that language under the direction of Ptolemy Philadelphus. In the year 166 B. C. the Jews threw off the foreign yoke and secured their national independence; but a century later, Jerusalem was captured by the Roman general Pompey (63 B. C.), and Judæa became a part of the

Roman province of Syria. The Jews were not obedient subjects, and drew down on themselves severe punishments. At length, in the

COIN OF TITUS.*

year 70 A. D., Jerusalem was again taken after a long siege by Titus, the city was razed to the ground, and the nation became dispersed, as it now is, throughout every country of the world.

89. In summing up Hebrew history as a whole we notice :

1. That, in geographical extent, the Jewish state was but a limited domain,—the whole country

Summary.

* This interesting coin was struck in A. D. 77. The face of the coin (the *obverse*), shown on the left-hand side, represents the laurel-crowned head of Titus, with the inscription T[itus] CAES[ar] IMP[erator] AUG[usti] F[ilius] TR[ibunicia] P[otestate] CO[n]S[ul] VI [i. e. sextum] CENSOR; that is, Titus Cæsar, Imperator, son of Augustus [i. e. Vespasian], with tribunitial power, sixth time consul, censor. On the back of the coin (or *reverse*), at the right-hand side, is a female figure seated under a palm-tree, behind which are a standard, helmets, etc.; and on this side is the inscription IVDAEA CAPTA, i. e. *Judæa taken*.

being only 150 miles long by about 50 miles wide ; 2. That, compared with the great Oriental empires, with Assyria and Babylonia, Egypt and Persia, its political importance was slight ; 3. That the Jewish people contributed little to ancient civilization, so far as regards art, science, or politics.

90. The meaning and the mission of the Hebrew race were not in these forms of activity : it was given that people to influence the world in an entirely different way, namely, through spiritual truths and moral ideas embodied in sublime forms by bards and sages. These works, revered by us as the body of Old Testament literature, remain the permanent possession of the whole human family.

Absorption by Rome		63

CHAPTER V.

THE PHŒNICIANS.

91. PHŒNICIA was one of the most important countries of the ancient world, and to us the Phœnicians are one of the most interesting peoples of early history. The interest and importance of this nation do not arise from the extent of its territory, — for Phœnicia proper was all comprised in a mere strip of land between Mount Lebanon and the Mediterranean Sea, — but from the fact that the Phœnicians hold a high place in the history of primitive civilization. Interest of their history.

92. The Phœnicians were the earliest commercial and colonizing people on the shores of the Mediterranean Sea. There they preceded the Greeks, who subsequently became their great rivals in trading and in planting settlements. It was not until about 1000 B. C. that the Greeks began to push off from the mainland and to occupy the islands of the Ægæan Sea and the shores of Asia Minor, — and when they did commence to spread themselves from the mainland to the islands, they found the Phœnicians already settled there. Traders and Colonizers.

93. As early, probably, as the 9th century B. C. the enterprising Phœnicians had founded on the northern coast of Africa the colony of Carthage, which became the most famous of the Phœnician colonies, and which, five or six hundred years after this, guided by the military genius of Han'nibal, ventured to cope with the mighty power of the Roman Commonwealth. Carthage.

94. The Phœnicians had gone even farther: they had made their way beyond what the Greeks called the "Pillars of Hercules," that is, the Strait of Extent of settlements.

Gibraltar, and had sailed from the Mediterranean Sea into the Atlantic Ocean. There they had founded the city of *Ga'des* (now *Cadiz*). Sailing over the Atlantic, their merchants sought the southern parts of the British Islands to procure tin from Cornwall. In the Eastern seas the Phœnicians had made establishments on the Arabian and Persian Gulfs, whence they traded with India and Ceylon and the coasts of Africa. Thus we see that the Phœnicians were navigators, merchants, and planters of colonies several centuries before the Greeks rose to any note in the world.

95. The Phœnicians as planters of colonies had an important influence on the progress of civilization, and of political freedom; and

MAP STUDY.

1. Where was Phœnicia?
2. What nation immediately south?
3. In what respect was Phœnicia well situated for commerce?

5. Where was the territory of Carthage?
6. The city of Carthage?
7. Utica?
8. What was the name of the Phœnician territory in southern Spain?
9. Where was Gades?
10. Name the large Mediterranean islands in which the Phœnicians had colonies.

we must now try to understand how this was. Colonies are founded by trading nations for the purpose of securing a lucrative commerce, by establishing a market for the manufactured produce of the parent state, and a carrying-trade for its merchants and seamen. This is the *motive*; and we see that it contrasts very noticeably with the cause that leads despotic states to form military establishments, — which is mere lust of conquest for conquest's sake. Colonies planted by commercial states require to be flourishing in order that the mother country shall have profitable relations with them. The parent country, knowing this, leaves the colonies to the guidance of persons advanced in political knowledge, who know how to adapt the institutions of the home government to the actual state of affairs in the new settlement: hence it has generally happened that civil liberty has developed more rapidly in commercial colonies than in the parent country itself.

96. The ancient Phœnicians were the inventors of the first perfect *alphabet*. This is a very significant and interesting fact; for, all things considered, the art of alphabetical writing is probably the most important invention ever made by man. We have seen that the Egyptians developed the germ of the alphabet; but the Egyptian writing was only in part *phonetic*: hence the hieroglyphic alphabet was very cumbersome, consisting of several hundred characters, no sound having one fixed and invariable character to represent it. The *cuneiform*, wedge-shaped, or arrow-headed characters of the Babylonians and Assyrians were not truly phonetic: they represented, as a general thing, *syllables* rather than sounds. It was reserved for the Phœnicians to adopt the apparently simple, yet ingenious and beautiful, device of determining the few elementary sounds of language and appropriating one distinctive character to represent each sound. The period of the invention is not definitely known.

Alphabet.

97. The Greeks were directly indebted to the Phœnicians for the alphabet; the Romans adopted the Greek alphabet with some changes; the Roman alphabet is the basis of our modern alphabets. The Greeks themselves were ignorant of precisely how they obtained the alphabet from the Phœnicians. The account they gave is that "Cadmus brought sixteen letters from Phœnicia into Greece, to which Palame'des, in the time of the Trojan war, added four more, and Simon'ides afterwards added four."* Modern scholars have proved that *Cadmus* is a mere fabled name signifying "the East." However, it is quite certain that the Greeks *did* derive their alphabet from Phœnicia. The transition from the Phœnician to the Greek may be readily perceived by examining the table on the opposite page.

98. The origin of the Phœnician nation is lost in the darkness that shrouds primitive history. It is known that, like the Hebrews, they were pure Semites. There is reason to believe that they were emigrants from Chaldæa, and as it is recorded in the Hebrew Scriptures that Abraham came out of "Ur of the Chaldees," we may infer that Southern Mesopotamia was the native seat of the Semites. When the Phœnician branch of the Semites reached their new home on the shores of the Mediterranean, they found an aboriginal population of Ca'naanites, whom they subdued, just as the Jews did in Judæa. We also know that the Phœnician and Jewish rulers and peoples were connected by ties of friendship. Hiram, King of Tyre, was the friend both of David and of Solomon.

99. Phœnicia consisted of several independent states, each city, in fact, being a separate state, under its own king; and only in times of danger did they occasionally unite under the leadership of the mos'

powerful. The chief cities of Phœnicia proper were Sidon and Tyre. Of these Sidon was the more ancient; and previous to about 1050 B. C., when Tyre became predominant, it was the most flourishing of all the Phœnician communities. About 1050 there was a transfer of power to Tyre.

100. The commerce of Tyre is described as very

extensive at this time. Her ships sailed to Tarshish (the south of Spain), and sought the gold of Ophir, along the east coast of Africa. Phœnicia grew rich

also by exports, of which the chief were the embroidery and glass of Sidon and the Tyrian purple, a dye yielded by two shell-fish, which gave a high value to the stuffs woven in the Tyrian looms. The Phœnicians were also skillful in metallurgy; and their bronzes, their gold and silver vessels, and other works in metal, had a high repute.

101. Phœnicia was successively subject to Assyria, in the Revolution of 9th century; to the Babylonians, under Nebuchadnezzar, at the close of the 7th century; to the Persians, under Cambyses, towards the close of the 6th century; and to the Greeks, under Alexander the Great, in the 4th century B. C. Still later it was absorbed in the universal dominion of Rome, 63 B. C.

102. The greatest period of Phœnician history was during the five hundred years from the 11th to the 6th century B. C. As Greece rose to power, and as Carthage increased in importance, the sea-trade of Phœnicia was to a considerable degree checked. However, she

TYRE, AND PHŒNICIAN GALLEY.

continued to preserve a great caravan-trade with the interior of Asia *via* Babylon. The foundation of Alexandria as a seaport must have damaged the commerce of Phœnicia. Still, it was not until the Middle Ages that her light went out, and she became a "place for the drying of nets."

103. The Phœnicians deserve to be commemorated in history by the side of the Greek and the Latin nations, as the only one of the Asiatic peoples that became a *diffuser* of civilization. We should note, however, that their development was very one-sided. Thus their religious conceptions were rude and uncouth, and this is a remarkable fact, when we consider their kinship with the Hebrews. In learning and in artistic productions they were far behind the Babylonians; so that in intellectual matters they appear to have been adaptors rather than originators. Again, unlike the Greeks and Latins, the Phœnicians seem to have been devoid of genuine political instinct: liberty had no charm for them, and they aspired not after dominion. "Careless they dwelt," says the Book of Judges, "after the manner of the Sidonians, quiet and secure."

104. The Phœnicians were a race essentially materialistic and commercial. They were the earliest merchants, carriers, and colonizers. It is true that, *incidentally*, they were the means of diffusing intellectual wares that were more valuable than all the products of the Sidonian shops or the fabrics of the Tyrian looms: they spread the alphabet, and they gave to the Aryan races on the shores of the Mediterranean ideas of learning, science, and art which they themselves had borrowed from the East; but these ideas were scattered by them "more after the fashion of a bird dropping grains than of the husbandman sowing his seed."*

* Mommsen, History of Rome.

CHAPTER VI.

THE HINDOOS.

105. THE Oriental nations of which we have thus far learned have been either Semites or Hamites. **Asiatic Aryans.** We are now to inquire into the history of the two Asiatic representatives of the great *Aryan* race,—the Hindoos and the Persians.

106. We have already seen that the forefathers of all the great European peoples came originally from Western Asia, where they dwelt side by side with the ancestors of the Persians and Hindoos. But the original seat of the undivided Aryan family was not Persia or India. The Persians were immigrants into Persia, and the Hindoos into India, just as the Greeks, Latins, Teutons, Celts, and Slavonians were immigrants into Europe. The original seat of the undivided Aryan stock is fixed by scholars to the northeast of Persia, in the region of the Oxus and Jax-ar'tes rivers.

107. The primitive Hindoos, leaving their native seat, first settled in the northwestern part of India. **Hindoo migration.** It seems to have been about the year 3000 B. C. * that they crossed the Indus and established themselves between that river and the Jumna, since known among themselves as Ar'ya Var'ta. Some time afterwards we find them occupying all the country north of the Vindya range.

108. At this time the peninsula of India was occupied by native dark races. These were speedily subdued by the fair-skinned Aryans, who eventually overspread the entire country. In process of

Amalgamation.

* According to Sanscrit scholars, 3101 B. C.

time these lost much of their purity of blood by intermixing with the native tribes, many of whose customs and ideas they adopted, and in the end they almost wholly lost their identity. This fact explains much that is peculiar in the civilization of the Hindoos. The Aryans in general are a progressive and practical race ; but the Hindoos, after making considerable advances in literature and philosophy, became stationary, and had very little influence on the great current of the world's history. We shall see that their kinsmen the Persians, being left unmixed, developed far more of those characteristics that marked the European members of the Aryan stock, — the Greeks, Latins, Teutons, etc.

109. The first historical notice that we have of India in relation with Europe is at that great epoch ^{Alexander's visit.} in its history, its invasion by Alexander the Great (326 B. C.), in the course of his world-conquering expedition. The Macedonian leader merely looked into India, fought a few engagements with the native princes, and then returned ; but the historians who accompanied the expedition left a description of Indian society, — and it corresponds almost exactly with what may be seen at the present day.

110. At the time of Alexander Indian society was firmly fixed in *castes*, similar to the state of things ^{Castes.} we found in Egypt ; and the same system both prevails to the present day and has prevailed from time immemorial. The Hindoos made four divisions of society : 1. The Brahmins, whose proper business was religion and philosophy ; 2. The Kshatriyas, who attended to war and government ; 3. The Vaisyas, who were the merchants and farmers ; 4. The Sudras, or artisans and laborers. Below even the lowest of these classes were the *Pa'riahs*, or outcasts, who performed the meanest of all labors. As a general thing, every person was required to follow the pro-

fession of the caste to which he belonged, and the regulations about intermarriage were very rigidly prescribed.

III. The division into castes probably arose from the desire of the conquering Aryans to keep up a distinction between themselves and the inferior tribes about them; and the Hindoo word for caste, *varna*, is said to mean *color*.

II2. The language of the ancient Hindoos was the *Sanscrit*; it is not now spoken, and is understood only by the Brahmins and by scholars who have studied it. It was the opening up of this tongue to the knowledge of European scholars, at the close of the last century, that led to the grouping of all the languages of Europe along with the Sanscrit as the *Indo-European* (Aryan) family of tongues. It was found that Sanscrit, both in its words and grammar, bore a remarkable likeness to the Greek, Latin, German, Celtic, and Slavonic languages; and though Sanscrit is not now regarded as the *parent* of these dialects, it is looked upon as the language the nearest to the original speech of the undivided Aryans.

II3. In this highly developed language the learned men of ancient Hindostan recorded a vast body of literature, much of which has been preserved to the present day. Among the oldest of these writings are the Vedas, which are believed to be as old as 2000 B. C. They form part of the sacred books of the Brahminic religion.

II4. The Vedas distinctly set forth the doctrine that there is "one unknown true Being, all-present, all-powerful, the creator, preserver, and destroyer of the universe." This Supreme Being "is not conceivable by vision or by any other of the organs of sense." But the prevailing theology which runs through them is what is called *pantheism*, or that system which speaks of God as the soul of the universe, or as the universe itself.

“In him the whole world is absorbed ; from him it issues ; he is entwined and interwoven with all creation.” “All that exists is God ; whatever we smell, or taste, or see, or hear, or feel, is the Supreme Being.” The Invisible Supreme Being, according to the Hindoos, manifests himself in three forms,—as Brahma the creator, Vishnu the preserver, and Siva the destroyer.

115. The central point of the Hindoo theology was the doctrine of transmigration of souls. Accord- Doctrine of transmigra-
tion. ing to this doctrine the human soul is joined to earthly bodies only for the purpose of punishment, and its aim and effort are to reunite itself with the Divine Spirit of the universe. The Hindoo, therefore, regards existence in this world as a time of trial and punishment, to be abridged by prayer and sacrifice, by penance and purification. If a man neglects these, his soul after death will be joined to the body of an inferior animal, and will have to commence its wanderings afresh.

116. In addition to the Vedas, the Hindoos possess a very extensive literature, both prose and po- Other writings. etical. A considerable number of these works have been translated by modern scholars. They are exceedingly curious, and of the highest worth as illustrative of the mental state of this peculiar ancient representative of our own Aryan stock ; but the absence of artistic form prevents their being appreciated by general readers, and hence lessens their *literary* value.

117. There are in India copious remains of ancient art. Among the most remarkable of the monuments Architecture. are the rock-hewn temples and grottos, especially those found at Ello'ra, in the middle of Lower India, and at the Island of Elephan'ta, in the Bay of Bombay. These are elaborately sculptured and inscribed, and must have required the labor of thousands of hands for ages.

118. In the 6th century B. C. there arose in India a new

system of religion called Buddhism. Its founder was an Indian prince named Gautama. It grew out of a social and religious reaction from the abuses of the old Brahminism; and it was no doubt in many respects an important reform. It spread rapidly, and is still the religion of one third of the human race.

119. Though during the whole period of antiquity India remained shut out from what was then the civilized world, it nevertheless had an important influence on ancient commerce. The abundance of the productions of nature and art — pearls, precious stones, ivory, spice, frankincense, and silks — made that region from an early period the center of a great maritime and caravan trade. The Phœnicians, as we have seen, were engaged in the carrying-trade of India both by land and sea. The same business was inherited by the Italian republics during the Middle Ages; and the “pearl and gold” of India found their way through Arabia and the Red Sea to the Mediterranean, till Vasco da Gama, in the time of Columbus, rounded the Cape of Good Hope.

CHAPTER VII.

THE PERSIAN EMPIRE.

I. HISTORICAL OUTLINE.

120. It will be convenient to connect the history of the Medes with that of the Persians for two reasons: 1. The people of both countries belonged to the same race; 2. Although Media and Persia were for a time separate governments, yet very soon Media was absorbed in Persia.

Connection of
Media and
Persia.

121. On the plateau east of the chain of Zagros — the plain of ancient *Iran* — dwelt a hardy race, the Medes, and a kindred stock, the Persians. They were both pure Aryans. They were immigrants from the northeasterly native seat of the Aryan stock. By various successive movements, which were not completed till the 8th century B. C., they established themselves in the highlands of Media and Persia.

Origin of the
races.

122. The Medes first come to notice in connection with the Assyrians. About B. C. 710 Sargon, an Assyrian monarch, conquered some Median territory, and planted it with colonies, in which he placed

the Israelites from the cities of Samaria who had been led into captivity by the Assyrians.

123. But the Assyrians could not hold in subjection the Medes, who grew in power and established a great Median monarchy under Cyaxares, 633 B. C. He was a conquering king: invading Assyria, he destroyed Nineveh in 625 B. C., and pushed the Median arms westward into Asia Minor. This king, the founder of the Median monarchy, was succeeded by his son Astyages, under whom the brief dominion of Media gave place to the rule of Persia under Cyrus the Great.

124. During this early period of the Median monarchy, the Persians also had established a kingdom (in Persis, or ancient Persia proper); but it was in a measure subject to Media. While Astyages was king of the Medes Cambyses was king of the Persians, but Cambyses acknowledged Astyages as his suzerain, and paid him tribute. The daughter of the Median monarch Astyages was married to the Persian prince Cambyses, and to them a son was born named Cyrus. Cyrus lived as a sort of hostage at the court of his grandfather Astyages, and could not leave it without permission.

125. Thus much in the life of Cyrus is true *history*; but when we go much further, we are immediately plunged into fable. Both Herodotus and Xenophon* exalted Cyrus to the rank of a hero of romance. The following is the current story of his early life. Astyages having dreamed that his daughter's son should conquer all Asia, intrusted to a courtier, Har'pagus, the task of killing the little Cyrus. Harpagus gave the child to a herdsman, who promised to expose it on the mountains.

* Xenophon, a Greek historian, was born about 444 B. C., and was a disciple and friend of Socrates. He wrote a work on Cyrus called *Cyropædia* (literally, Education of Cyrus); but it is rather a political romance than an authentic history.

But the herdsman was led to substitute his own dead baby for the living prince, who grew up in a humble station. The secret was disclosed, when Cyrus began to lord it over his playfellows and beat them. A noble's son complained to the king, and the royal boy was recognized. Astyages took a barbarous revenge on Harpagus, by cooking the courtier's son and serving up the flesh for the father to partake of. Cyrus was sent to his father, and Harpagus bided his time for revenge. When the time was ripe, he sent a secret message to Cyrus, who invaded Media, was welcomed by crowds of deserting troops, and by their aid overturned the Median throne, 558 B. C. We need not attempt to discover what basis of truth, if any, there may be in this legend. One fact is certain, that under Cyrus the Persians became the ruling power.

126. Commencing his reign in 558 B. C., Cyrus first subdued all the northern and western provinces of the old Median kingdom. On the western frontier the most formidable enemy he encountered was Cræsus, King of Lydia, in Asia Minor. Cræsus, taking the offensive, led his army from Sardis, his capital, across the river Ha'lys (which formed the boundary between the Persian and the Lydian territory), and an indecisive action was fought near Sino'pe. But Cyrus followed up, and by the overthrow of Cræsus and capture of Sardis added all Asia Minor west of the Halys to the dominion of Persia, 554 B. C.* Next, most of the Greek cities and colonies on the coast of Asia Minor and the adjoining islands were subdued. The remote East now claimed the attention of Cyrus, and between the years 553-540 B. C. he was employed in the subjugation of the various tribes in the region between Persia and the Indus, — Parthia, Bactriana, Sogdiana, etc.† The

* This is the date of the fall of Cræsus, according to Rawlinson; most other chronologers place it at 546 B. C.

† See Map of Persian Empire, opposite p. 55.

greater glory of reducing the mighty power of Babylonia now remained: this was accomplished by the capture of Babylon (538 B. C.), as already described. (See page 36.)

127. During his career of twenty-nine years, Cyrus ex-
 Extent of his empire. tended the Persian dominion from the Indus to the Hellespont, from the Jaxartes to the Syrian shore; and indeed he left to his successors only the completion and consolidation of his work, for by his own efforts he had made Persia the great imperial power of Asia.

128. Of the whole line of Persian monarchs Cyrus was the greatest, and his character is far more worthy of respect than that of any of his successors. He was a great
 Character of Cyrus. conqueror without being a cruel ruler, and to remarkable ability as a soldier he added many noble traits as a man.

129. Cyrus was succeeded by his son Cambyses. To
 Cambyses. another son, named Smerdis, Cyrus had given the dominion over some important provinces. This arrangement cost Smerdis his life, by rousing the jealousy of his brother, who very early in his reign caused him to be put to death secretly. The chief event of Cambyses's reign was his conquest of Egypt in 525 B. C. In Egypt Cambyses behaved with great wantonness and cruelty. He forced the Egyptian king Psammen'itus to drink poison; he shocked the Egyptians by stabbing a calf which they regarded as sacred; and on one occasion, when a courtier told him at his own request that popular rumor blamed him for drinking to excess, he proved the steadiness of his hand and eye by piercing the heart of that courtier's son with an arrow.

130. The absence of Cambyses brought about a revolution
 Revolution. at the Persian capital. A Magian, named Gomates, personated the murdered brother Smerdis, and headed a conspiracy that raised him to the throne. When Cambyses heard the news, he hastened towards Persia, but while on the way he died,—some say by suicide,

others from an accidental wound from his own dagger, — 522 B. C., after having reigned less than eight years. The reign of the false Smerdis was brief. Dari'us, the son of Hystas'pes, governor of one of the Persian provinces, and himself belonging to the royal family, headed an insurrection, and the impostor was slain after he had reigned eight months.

131. Darius I. (Darius Hystaspes), who ascended the throne 521 B. C., was, next to Cyrus, the greatest of the Persian monarchs. He completed the work that Cyrus began. Cyrus by his conquests *founded* the empire ; Darius *organized* it. To him belongs the credit of having given to the Persian Empire that peculiar political system and arrangement that maintained it in a fairly flourishing condition for nearly two centuries.

132. Darius divided the whole empire into twenty "satrapies," or provinces ; the native tributary kings being swept away, and each province governed by a Persian official called a *satrap*. A fixed rate of tribute took the place of arbitrary exactions. "Royal roads" were established, and a system of posts arranged, whereby the court received rapid intelligence of all that occurred in the provinces. The great centers of Persian power were fixed at Susa, the spring residence of the king ; Ecbat'ana, his summer abode ; and Babylon, the winter-quarters.

133. The most interesting event in the reign of Darius is the commencement of the Persian invasions of Greece. Some of the Greek cities of Ionia in Asia Minor, which had been brought under Persian dominion by Cyrus, revolted ; the Athenians encouraged them in this revolt, and this brought Persia and Greece into collision on the plains of Marathon, 490 B. C. [As nearly all that is striking in the after history of Persia interweaves itself with the affairs of Greece, the narrative will best be given in connection with Grecian history.]

2. PERSIAN CIVILIZATION.

134. The Persians belonged to the same stock as the Medes, but they seem to have been even more purely Aryan, — and the term ‘Aryan’ is itself a Persian word signifying *noble*. When we first meet them in history, they are a race of hardy mountaineers, brave in war, rude in manners, simple in their habits, abstaining from wine, and despising all the luxuries of food and dress. Though not highly intellectual, the Persians were keen-witted, vivacious, and fond of poetry and art. Indeed, they seem in many respects prototypes of the Greeks, whose kinsmen, through a common Aryan descent, they were. They afterwards lost their noblest traits of character and became a servile Asiatic race ; but it was during their hardy, virtuous prime that all their conquests were made.

135. As builders and artists, the Persians were first pupils of the Assyrians and Babylonians. The magnificent temples and palaces of Nineveh and Babylon had been in existence many centuries before the race of Iran began to do anything in art, and it was not till they came in contact with the Assyrians and Babylonians that they commenced to erect noble structures. Then, however, they did more than merely imitate: they *adapted*, so as to make a new architectural style of their own. This style may be said to stand midway between the solemn and heavy grandeur of Egyptian and Assyrian architecture and the perfect beauty of the Grecian. The great masterpieces of Persian building consist of *palaces* and *tombs*, — their outdoor and simple worship requiring no imposing *temples*. The most famous remains of Persian architecture are the ruins of the royal palaces at Persep’olis. The distinguishing features of these are the solid and handsome stone platforms, the noble staircases richly sculptured in bas-reliefs, and the profusion of light and elegant stone columns.

136. The Persians did very little in the mechanical arts. It was their boast that they were soldiers and had won by their swords a position that gave them command of the products and wares of other nations. So long as the carpets and muslins of Babylon and Sardis, the shawls of Cashmere and India, the fine linen of Egypt, and the varied manufactures of the Phœnician towns poured continually into Persia, it was needless for the native population to engage in manufacturing industry. Arts.

137. The Persians had a much purer and nobler religion than the Egyptians, Assyrians, Babylonians, or Phœnicians. They were not idolaters. Indeed, in the primitive period the main feature of their religion was the acknowledgment and the worship of a single supreme God, — “the Lord God of heaven.” But this at an early date gave way to the doctrine of the perpetual conflict of two great First Principles, that of Light and that of Darkness, personified under the names of *Auramazda*, or *Or’mazd*, and *Ahriman*. Religion.

138. The Persian religion was further corrupted by the intermixture of a system of worship of the elements, — a system which the Medes had learned from the Scythians, and which ultimately overlaid the purer doctrines of the Persians. The leading feature was fire-worship, or Magianism (from *Magi*, the name of the priests of this rite). On lofty mountain-spots fire-altars were erected, on which burned a perpetual flame, watched constantly lest it should expire, and believed to have been kindled from heaven. Here day after day the *Magi* chanted their incantations, displayed their divining-rods, and practiced those arts called, after them, *magic*. Fire worship.

139. The government of Persia as ruler over many countries was a great advance on the theory of government of the other Oriental empires. It was more than a mere loosely joined congeries of king- Government.

doms, — it was a real imperial dominion. The government was upon the whole singularly mild, and by far the noblest and the best of all the universal empires of antiquity.

140. There is no doubt that the Persians had a considerable literature, but very few fragments of
Literature. it have survived. The oldest literary monument of the Iranic race is the collection called the Zend-Avesta, which contains the sacred books of the Persians, and which was compiled by Zoroas'ter, the great religious legislator of the Persians. We can form some idea of ancient Persian poetry from a poem called the Shah Nameh, an epic composed by Firdousi, the greatest poet of Persia, about the middle of the 10th century A. D. Though written at a time long subsequent to the Persian greatness, it is yet valuable as based on ancient traditions and fragments of song and story. Judging the poetical faculty of the Persians by this epic, we should say that they were distinguished rather for lively fancy and arabesque conceits than for true creative imagination such as distinguished the Greeks, or for the grand inspiration that breathes through the productions of the Hebrew bards and prophets.

NOTE ON ASIA MINOR, — LYDIA. — The peninsula of Asia Minor was occupied from very early times by various nations; but as these were of secondary importance, nothing need here be said of their history save in the case of Phrygia and Lydia.

It is believed that the earliest dominant people of Asia Minor were the Phrygians, who at one time occupied the whole of the peninsula. The people were engaged in agriculture and commerce. Their capital was Gordium, and the kings were alternately Gor'dias and Mi'das; but great obscurity rests on their history. Phrygia became a province of Lydia in 560 B. C.

Lydia in the 7th century rose to be the ruling power in Asia Minor. The last and greatest king of this nation was Crœsus, who is famous in history for his enormous wealth. When Cyrus on his career of conquest carried the Persian arms into Western Asia, Crœsus made an alliance with Sparta, Egypt, and Babylon to resist him; but, as we have seen, Cyrus was victorious, Crœsus was made prisoner, and Lydia was absorbed in Persia, 554 B. C.

CHAPTER VIII.

COMMERCE OF THE ANCIENTS.

141. THE three most commercial nations of antiquity anterior to the Greeks were the Babylonians, Phœnicians, and Carthaginians. A brief sketch of the great routes of the trade of these nations, together with the leading articles of exchange, will be found of value in connection with the interesting map presented on the opposite page.

Ancient commercial nations.

142. Babylonia, with its admirable situation, was one of the leading emporiums of ancient commerce. This trade consisted partly in the exchange of Babylonian manufactures, and partly in the purchase of products of the farther East.

Babylonian trade.

143. Weaving of cotton, woolen stuffs, and carpets was the principal manufacture established in Babylon. Articles of luxury, such as perfumed waters, carved walking-canes, engraved stones and seals, were made in the city, and the art of cutting precious stones was carried to the utmost perfection. These articles were sought by all the civilized nations of antiquity.

Babylonian manufactures.

144. The Babylonians had an extensive commerce eastward with Persia and Northern India, whence they obtained gold, precious stones, and rich dye-stuffs. From Can'dahar and Cashmere they procured fine wool, and from the desert of Bactria (the modern Cobi) emeralds, jaspers, and other precious stones. The trade by sea was between the mouths of the Tigris and Euphrates, and the western coasts of India and the Island of Ceylon. From these regions they imported timber of various kinds, sugar-cane, spices, cinnamon, and pearls. At a very early

Trade routes from Babylon.

period the Babylonians formed commercial establishments on the Bahrein [*bä-rān'*] Islands in the Persian Gulf, whence they obtained large quantities of the finest pearls.

145. The Phœnicians were the leading commercial people of Asia. Though the textile fabrics of the Sidonians and the purple cloths of the Tyrians were celebrated from the earliest antiquity, it seems probable that the commerce of the Phœnicians consisted more in the interchange of foreign commodities than in the exportation of their own goods.

146. The land trade of the Phœnicians may be divided into three great branches: the Arabian, which included the Egyptian and that with the Indian seas; the Babylonian, to which is referred the commerce with Central Asia and North India; and the Armenian, including the overland trade with Scythia and the Caucasian countries.

147. From Ye'men (Arabia Felix) caravans brought through the desert frankincense, myrrh, cassia, gold, and precious stones,—the gold being probably obtained from the opposite shores of Africa. The greater part of the Phœnician trade with Egypt was overland. The first branch of the eastern Phœnician trade was with Judæa and Syria proper. The dependence of the Phœnicians on Palestine for grain fully explains the cause of their close alliance with the Jewish kingdom.

148. But the most important branch of Phœnician trade with the Orient was that through Babylon to the interior of Asia. A considerable part of the route to Babylon lay through the Syrian desert, and to facilitate the passage of the caravans two of the most remarkable cities of the ancient world, Baal'bec and Palmy'ra, were founded.

149. The Scythian trade may be very fairly considered the same, in all important particulars, as that which now exists between Southern Russia and

Bokha'ra. It was connected with Europe by the Greek colonies on the Euxine (Black) Sea. But the most important branch of trade carried on through the Scythian territories was the Indian, with which probably we may connect the Indo-Chinese. Bactra and Marcanda (*Balkh* and *Samar-cand'*) have always been the depots of an active commerce. It is certain that a portion of this trade passed over the Caspian Sea; but it is equally certain that the greater portion of it was conducted by caravans, which went round the north of the Caspian, and perhaps of the Sea of Aral.

150. The northern land trade of the Phœnicians is described by the Prophet Ezekiel: "Javan (i. e. Ionia and the Greek colonies), Tubal, and Northern trade. Meshech (i. e. the countries round the Black and the Caspian Seas), they were thy merchants: they traded the persons of men and vessels of brass in thy markets. They of the house of Togar'mah (i. e. Armenia and Cappadocia) traded in thy fairs with horses and horsemen and mules." *

151. The Mediterranean Sea was, however, the great high-road of Phœnician commerce. Spain was, in respect to precious metals, the richest country Phœnicians in the Mediter-ranean. of the ancient world; and here this pushing people early formed stations. "Tar'shish (i. e. Tartes'sus, or Southwestern Spain) was thy merchant by reason of the multitude of all kinds of riches; with silver, iron, tin, and lead they traded in thy fairs." † From Spain the Phœnicians entered the Atlantic Ocean, and proceeded to the south of the British Isles, where they procured the tin of Cornwall, and probably to the coast of Prussia, for the greatly esteemed amber. In the eastern seas they had establishments on the Arabian and the Persian Gulfs, whence they traded with the coasts of India and Africa and the Island of Ceylon. During the reign of Pharaoh Necho, King of

* Ezekiel xxvii. 13, 14.

† Ibid., 12.

Egypt, they discovered the passage round the Cape of Good Hope ; but this led to no important result, on account of the calamities that Tyre endured from the conquest by the Babylonians in the 6th century.

152. The commerce of Carthage was carried on both by land and sea. Her own manufactures included fine cloths, hardware, pottery, and leather harness. The principal land trade of the Carthaginians was by caravans with the barbarous tribes of Central Africa, the chief imports being negro-slaves and gold-dust.

153. In the western Mediterranean their chief trade was with the Greek colonies in Sicily and the south of Italy (from which they obtained wine and oil in exchange for negro-slaves, precious stones, and gold, and for cotton cloths manufactured at Carthage), and also with Spain, the El Dorado of antiquity. In fact, the Carthaginians possessed almost exclusively the carrying trade between the nations of Africa and those of Western Europe. Beyond the Strait of Gibraltar the Carthaginians succeeded the Phœnicians in the tin and amber trade with the British Isles and the shores of the Baltic.

154. On the west coast of Africa the Carthaginian colonies studded the shores of Morocco and Fez ; but their great mart was the Island of Cer'ne* (now Suana), the principal depot of merchandise, whence goods were transported in light barks to the opposite coast. Here the Carthaginian exports were trinkets, saddlery, cotton goods, pottery, and arms, for which they received hides and ivory. There is also every reason to believe that these enterprising merchants had some intercourse with the coast of Guinea, and that their navigators advanced beyond the mouths of the Sen'egal and Gambia.

* Hanno in the year 570 B. C. conducted sixty ships, bearing 30,000 colonists, to the western shores of Africa, where he planted a chain of six colonies between the Strait of Gibraltar and the Island of Cerne.

ANALYTIC SYNOPSIS FOR REVIEW.

I. Nations treated of.

We have considered the history of the following ancient Oriental nations :—

ORIENTAL NATIONS OF ANTIQUITY...	{	The Egyptians.
		The Assyrians and Babylonians.
		The Hebrews.
		The Phœnicians.
		The Hindoos.
		The Persians.

II. Classification of Races.

These nations may be classed in three races,—the Aryan, or Indo-European, the Semitic, and the Hamitic, as follows :

ARYAN RACE.....	{	Hindoos.
	{	Persians.
SEMITIC RACE.....	{	Assyrians.
	{	Phœnicians.
	{	Hebrews.
HAMITIC RACE....	{	Egyptians.
	{	Chaldæans (early Babylonians).

III. Place in History.

Summing up what we have learned respecting the part played by the several ancient Oriental nations, we may mark the following characteristics :—

EGYPTIANS...	{	Leading representative of the Hamitic stock, — developed apart, — were not a conquering or aggressive race, — had a marvelous building instinct, — attained a considerable advancement in many of the mechanical arts, and had some knowledge of certain sciences, especially astronomy and geometry, — marked by the stationary character of their civilization.
CHALDÆANS ..	{	Seem to have been a Hamitic stock allied to the Egyptians, — had building instincts similar to the Egyptians, — cultivated astronomy with much success, — their civilization of a materialistic character.

- ASSYRIANS....** { Were probably almost pure Semites, — were a conquering race, and became, previous to Persia, the great imperial power of Asia, ruling not only all the Mesopotamian countries, but also Media, Syria proper, Phœnicia, Palestine, part of Arabia, and nearly all Egypt, — in the fine arts excelled particularly in sculpture.
- BABYLONIANS.**
[*Later kingdom.*] { As a political power ruled for only the brief period of eighty-seven years, from the destruction of the Assyrian power to the conquest by the Persians under Cyrus (625 – 538 B. C.), but were for many centuries, while under Assyrian rule, an important people, — made marked advances in commerce, manufactures, and the practical arts.
- HINDOOS.....** { A nation of pure Aryan stock, but remarkable as a thoroughly unworldly race, devoting themselves largely to contemplation and mystic speculations, — have left a rich and remarkable literature written in Sanscrit, the oldest of the Indo-European tongues, — had but little influence on the political history of the world, and indeed can hardly be said to have a place in historic annals till the conquest of India by Alexander, 326 B. C.
- HEBREWS.....** { A “peculiar people,” playing a peculiar part in history, — had very little influence on the political history of antiquity, but have affected all the world through religion (monotheism), — have left as their great legacy the Hebrew Scriptures, — not an artistic people, — were a pure Semitic race.
- PHœNICIANS..** { Like the Hebrews, were Semites, — pre-eminently the traders and colonizers of antiquity, — the only Asiatic people that planted colonies on the Mediterranean shores of Europe and Africa, — left a priceless legacy in the Phœnician alphabet.
- PERSIANS.....** { Were pure Aryans, — made the nearest approach to European civilization of any Oriental nation, — had the best idea of political organization possessed by any Asiatic race, — were a conquering people, and became the great imperial power in Asia from the time of Cyrus to the conquest by Alexander (558 – 331 B. C.), — attained eminence in art, especially architecture and sculpture.

IV. Chronologic Summary.

The following are the most important dates under each nation :—

		B. C.
EGYPT.....	{ Beginning of authentic history in Dynasty of Pyramid-builders (Fourth), 25th century . . .	2450
	{ Conquered by Persians, 6th century . . .	525
	{ Conquered by Romans, 1st century . . .	30
CHALDÆA..... [<i>Early Babylonia</i> .]	{ First authentic date, 23d century . . .	2234
	{ Absorption in Assyria . . . (about)	1250
ASSYRIA.....	{ Becomes a great power absorbing Babylon (about)	1250
	{ Fall of Nineveh and overthrow of Assyria . . .	625
BABYLONIA....	{ Era of Nabonassar	747
	{ Revival of independence under Nabopolassar . . .	625
	{ Capture of Babylon by Cyrus, and overthrow of Babylonian kingdom	538
	{ Immigation of Brahminic Aryans into the Indus Valley (about)	3000
INDIA.....	{ Alexander's expedition into India	326
PALESTINE....	{ Migration of Abraham (about)	1920
	{ Exodus from Egypt	1320
	{ Accession of Solomon	1015
	{ Division of Solomon's Empire into the Kingdom of Israel and Kingdom of Judah . . .	975
	{ Destruction of the Kingdom of Israel by the Assyrians, and captivity of the Israelites . . .	721
	{ Capture of Jerusalem by Nebuchadnezzar . . .	586
	{ Return from the captivity	536
	{ Absorption by Rome	63
PHŒNICIA.....	{ Tyre becomes leading city-state of Phœnicia . . .	1050
	{ Phœnicia conquered by the Assyrians . (about)	870
	{ Foundation of the colony of Carthage . . .	850
	{ Tyre captured by Alexander the Great . . .	322
PERSIA.....	{ Phœnicia conquered by the Romans . . .	63
	{ Foundation of the Persian monarchy by Cyrus . . .	558
	{ Cambyzes becomes king	529
	{ Darius I. (Hystaspes), who organized the Persian Empire, becomes king	521
	{ Xerxes becomes king	486
	{ Overthrow of Persian Empire by Alexander . . .	331

V. General Summary.

The following may serve as a general summing up of the philosophy of Oriental history :—

The great feature of all the Oriental nations was their unprogressive character. In Asia there came into being a number of vast empires, but as these were despotisms, as the social state of the people was fixed in *castes*, and as the people themselves were reduced to a low level by polygamy, the power of man could not find free play : hence, though the ancient Eastern nations reached a considerable advancement in civilization, their civilization was of a stationary character. Asia was the land of births and beginnings, and played indeed a wondrous part in the history of our race ; but when in the order of Divine Providence her appointed task was completed, it was given to other lands and other peoples to carry forward the great work of humanity ; and we shall find that with the Aryan race on the free soil of Europe first comes true progress.

SECTION II.

HISTORY OF GREECE.

CHAPTER I.

GENERAL SKETCH.

THE PARTHENON RESTORED.

I. WE are now to begin the history of the two great European nations of antiquity, Greece and Rome,—the history “of the glory that was Greece, and the grandeur that was Rome.”

The story of these nations fills the whole period between about the year 1000 B. C. and the downfall of the Western Roman Empire, 476 A. D. Between the history of these nations and that of the ancient Oriental empires we shall find a marked contrast. The Orient presents to view a series of vast overshadowing despotisms under which the spirit

Contrast of
Oriental and
European his-
tory.

of individual freedom was completely crushed. That spirit first finds play in Europe, where we shall see the rights of man asserting themselves and taking embodiment in free, self-governing states. The history of the Orient is the history of *dynasties*; the history of Greece and Rome is the history of the *people*; and accordingly the latter is far more interesting, more instructive, and more valuable.

2. The Greeks were a branch of the mighty Aryan, or Indo-European, stock, — the stock that includes **Greek race.** all the historic races of Europe, together with the Persians and Hindoos of Asia. As Aryans, they were closely related to the Romans; and, in fact, the forefathers of the Greeks and of the Italians formed originally one swarm, which at a very early period in prehistoric times (not later than 2000 B. C.) left the native hive of the Aryans, in Asia, and moved into Europe. The evidence of language shows that this stock must have kept together for a considerable period after they had parted company from the other members of the Aryan family, and before they settled, the one branch in the eastern and the other in the central of the three Mediterranean peninsulas, where they

MAP STUDY.

[See Map opposite p. 73.]

1. What were the boundaries of Continental Greece? 2. What sea between Greece and Italy? 3. What isthmus connects the Peloponnesus with the mainland? 4. What gulfs on opposite sides of this? 5. What is the situation of the Pindus range? 6. They divided what states? 7. Tell the situation of the Cēta Mountains, of Olympus, of Parnassus. 8. What was the situation of Macedon, of Attica, of Laconia? 9. Where was the state of Bœotia? 10. Was Attica a seaboard or an inland state? 11. Was Lacedæmon an inland or a seaboard state? 12. What rivers are named on the map? 13. What large island off the east coast? 14. Where were the Cyclades and Sporades? 15. Where were the Chersonesus, Cyrenaica, Hellespont, Thrace, Asia Minor? 16. Where were Athens, Sparta, Thebes, Argos, Delphi, Corinth, Platæa, Marathon, Miletus, Sardis, the Pass of Thermopylæ?

subsequently appeared in history, the first branch as *Greeks*, the second as *Romans*.

3. *Greece* was a name almost unknown by the people whom we call Greeks, and was never used by them to describe their country. It was first ^{Hellas.} adopted by the Romans, from whom it has descended to us. The name by which the Greeks always called their country is *Hellas*. This term, however, included more than is now covered by the term *Greece*; for it comprised not only the adjacent islands, but also numerous patches of settlement around the Mediterranean Sea. *Hellas*, in fact, denoted wherever the *Hellenes*, or Greeks, were settled.

4. In the geography of Greece there are two important facts to be noticed: 1. That *Hellas* is a land ^{Physical features.} of islands and peninsulas, deeply perforated by bays and inlets of the Mediterranean. This fact is one of the main reasons why the Greeks were the earliest civilized people of Europe, since their situation on the sea-coast brought them into contact with those older civilizations whose seats were on the eastern shores of the Mediterranean, and especially with Egypt and Phœnicia. 2. That the surface of the country is ridged by numerous mountains, which divided Greece into a multitude of small, isolated regions. This fact favored the establishment of numerous separate and independent states or communities; and it was in these little states that, for the first time in the history of the world, political freedom was attained by man.

5. Greece proper is a peninsula about 250 miles long and 180 miles across in its widest part. It ^{Extent.} has an area about the same as that of the State of Maine.

6. The natural division of Greece is into Northern, Central, and Southern. Northern Greece extends ^{Divisions.} from the north boundary line to the point where the eastern and western shores are respectively in-

dented by the Gulfs of Ma'lis and Ambra'cia, or Ac'tium. Central Greece reaches from this point to the Isthmus of Corinth. Southern Greece is identical with the Peloponnesus, called in modern geography the More'a.

7. Northern Greece contained in ancient times two principal countries, Thes'saly and Epi'rus. To the north of these was Macedo'nia, which, though ruled by kings of Hellenic blood, was never counted to be part of Greece till quite late times.

8. Central Greece contained eleven states.* The most important of these was Attica, which is the foreland or peninsula projecting from Bœotia to the southeast. Its length was 70 miles, its greatest width 30 miles. The general character of this region was mountainous and infertile. In Attica was Athens, the foremost city of all Greece.

9. Southern Greece, or the Peloponnesus, contained seven principal states.* The most important of the southern states was Laconia, sometimes called Lacedæ'mon, of which the capital and most important city was Sparta.

10. The "isles of Greece" formed a very considerable and noted part of ancient Hellas. The largest of the coast islands was Eubœ'a, 100 miles long. Off the west coast was the important island of Corcy'ra. Off the southern coast was Crete, 150 miles in length. The Ægæ'an sea was studded with numerous islands, of which the two groups of the Cyc'lades and Spor'ades extended in a continuous series, like a set of stepping-stones, across from Greece to Asia.

11. It is probable that various tribes of the Aryan stock had penetrated into the Greek peninsula as early as 2000 B. C. In the ante-Hellenic pe-

* Name these states from the map, opposite page 72.

riod, that is, in the prehistoric age, we hear of the Pelas'gi, who seem to have been an Aryan race. They were civilized enough to till the earth and to build walled cities. To them are attributed the remains of certain ancient monuments known as Pelasgic, or Cyclopean, remains. These consist of tombs and of walls composed of enormous rude masses of stone joined to one another without cement.

12. At a period long before the beginning of recorded history the Pelasgi were overwhelmed by an invasion of a more vigorous and warlike race, the Hellenes. the Hellenes, who, descending from Thessaly, entirely over-spread the peninsula and gave their name to the whole country. There were four chief divisions of the Hellenes, — the Do'rians, Æo'lians, Achæ'ans, and Io'nians.

The Æolians were spread over Northern Greece and the western coast of the Peloponnesus; the Achæans held the southern and eastern part of the Peloponnesus (the Arcadians, a remnant of the older Pelasgic race, occupying the center); the Ionians were confined to a narrow strip of country along the northern coast of the Peloponnesus and eastward into Attica; the Dorians were to the north, and occupied the southern slope of Mount Cæta. Such appears to have been the distribution of the races in the age represented by the Homeric poems.

13. The Greeks of this age have no history, in the proper sense of the word. The place of this they supplied by a mass of beautiful legends, called by themselves *myths*. These recount the exploits of various heroes, and hence this period is called the Heroic Age. It is vain to attempt to separate the thread of historic truth which there may be in the body of Greek legends: to do so is only to "spoil a good poem without making a good history."

14. The last and greatest enterprise of the heroic age was the Siege of Troy. This was immortalized by the genius of Homer in his *Iliad* (from *Ilium*, or Troy); and recent explorations on the site of Troy give reason to believe that the narrative of Homer rests on a basis of actual fact. The outline of the story is as follows: Paris, son of Priam, king of Troy, abused the hospitality of Menela'us, king of Sparta, by carrying off his wife Helen, the most beautiful woman of the age. At the call of Menelaus all the Grecian princes assembled in arms, elected his brother Agamem'non leader of the expedition, and sailed across the Ægæan to recover the faithless fair one. Nearly all Asia Minor was leagued with Troy, and the most valiant Trojan leader was Hector, son of Priam. It was not till the tenth year that Troy yielded, and it is with the events of this year that the *Iliad* deals.

15. Achil'les, the bravest and most redoubtable of the Greeks, offended by Agamemnon, abstains from the war; and in his absence the Greeks

are no match for Hector. The Trojans drive them back into their camp, and are already setting fire to their ships when Achilles gives his armor to his friend Patro'clus, and allows him to charge at the head of the Myrmidons. Patro'clus repulses the Trojans from the ships, but the god Apollo is against him, and he falls under the spear of Hector. This causes Achilles to return into the Grecian camp, and he slays Hector in single combat ; but is himself killed by an arrow directed by Apollo. Finally, the noblest combatants on both sides having fallen, the city is taken by the Greeks, through the stratagem of a wooden horse, devised by the crafty Ulys'ses. Troy is delivered over to the sword, and its glory sinks in ashes.*

16. The most faithful reflex of the springtime of the Hellenic world is preserved to us in the Homeric poems, the *Iliad* and the *Odyssey*. Among the noticeable features of society, as there depicted, are : 1. The universality of kingiy government. 2. The predominance of the tribe or nation over the city, whereas in the historical period the city *is* the state. 3. The existence of a hereditary nobility, who form the king's council. 4. The existence of an assembly which is convened by the king to receive communications and witness trials, but not either to advise or judge. 5. The absence of polygamy, and the high regard in which women are held. 6. Slavery everywhere established and considered to be right. 7. Perpetual wars between the various tribes and nations, and the preference of the military virtues over all others. 8. Strong religious feeling ; belief in polytheism and in fate ; respect for the priestly character ; peculiar sanctity of temples and festival seasons.

17. According to the traditions of the Greeks, some important *foreign* elements were received into the nation during this first period. It is said that

Homeric
Greece.

Foreign influ-
ence.

* See note, end of this chapter.

both Phœnician and Egyptian settlements were made in Greece. Scholars now doubt that any such *settlements* were made ; but it is quite certain that the early Greeks, when they began to spread over the Grecian isles, came in contact with the Phœnicians, who were at this period the most commercial and progressive nation inhabiting the shores of the Mediterranean. From the Phœnicians the Greeks received the alphabet. It is probable, also, that the early Greeks drew from the fountains of antique Egyptian lore, and that they gained from the Egyptians their first knowledge of some of the arts and sciences ; while the influence of the Egyptian religious system can be plainly traced in the Greek mythology.

18. But, on the whole, Hellenic civilization was of home growth. Even what they took they stamped with their own character. Hence the Greek people must be considered to have developed for themselves that form of civilization, and those ideas on the subject of art, politics, morals, and religion, that have given them their peculiar reputation.

NOTE ON TROY. — In the revolutions of time the city of Troy has so completely disappeared that many scholars have been disposed to doubt even the existence of such a place. But in recent times fresh light seems to have been thrown on the subject by the researches of Dr. Schliemann, a German *savant*, who in the years 1869–73 made a series of explorations in the Troad, or “plain of windy Troy.” He identifies the city of Ilium, or Troy, with the modern place called Hissarlik. Many interesting archæologic remains were discovered by the explorer, who also states his belief that he could identify in the ruins the “house of Priam,” the Scæan gate, and various other points mentioned by Homer. Many scholars are not prepared to accept all the conclusions of Dr. Schliemann ; but all agree that his discoveries are of great interest, and furnish new illustrations of the “tale of Troy divine.”

CHAPTER II.

HISTORY OF THE FIRST PERIOD.

*FROM THE DORIAN MIGRATION TO THE BEGINNING OF THE PERSIAN WARS,
1100-500 B. C.*

I. BEGINNINGS OF GREEK HISTORY.

19. GRECIAN history may be divided into three periods:

1. From the Dorian migration to the beginning of the Persian Wars (1100-500 B. C.). Periods of Greek history.
2. From the beginning of the Persian Wars to the subjugation of Greece by Philip of Macedon (500-338 B. C.).
3. From the subjugation of Greece by Philip to the Roman conquest (338-146 B. C.).

20. Leaving the dim twilight of legendary Greece, we come to a period when there took place those movements of tribes that finally resulted in settling the Hellenes in those parts of Hellas in which we find them during the times of authentic history. Thus there seems to be no doubt that about the year 1100 B. C. the Dorians, who originally had been an unimportant tribe in the small patch of northern territory on the southern slope of Mount Œta, began to make a great figure in Greek affairs; for moving southward they conquered the Achæan kingdoms in the Peloponnesus, took possession of Laconia, or Lacedæmon, and gradually subdued most of the neighboring states. Period of settlement.

21. Out of the Dorian conquest of the Peloponnesus resulted other great changes in the Hellenic world. The Achæans, expelled from the south and east of the peninsula, fell back upon the northern coast, driving out the Ionians. The latter found refuge with their brethren of the same race in Attica, and the Ionians became Other movements.

not only the dominant race in Central Greece, but also spread themselves over most of the Cyclades Islands in the Ægæan Sea.

22. The planting of Greek colonies in Asia Minor was another important event of this early period, connected with the general unsettlement resulting from the Dorian conquest. These colonies were made by the three races, the Æolians, Ionians, and Dorians. The Æolians established themselves along the coast of Mysia and in the Island of Les'bos, where they formed a confederation of twelve cities (Æ'olis). The Ionians established themselves on the shores of Lydia, and on the islands of Chi'os and Sa'mos (Io'nia), and grew into a very powerful confederation. The Dorian colonies were planted in the southwestern corner of Asia Minor and the adjacent islands (Do'ris); but they were of less importance than the Æolian, and especially the Ionian, settlements, which became of great note in Grecian history.

23. Other settlements were made by the Greeks, of which the most notable were those on the coasts of Thrace and Macedonia, on the islands west of Greece, in Sicily, in Lower Italy (hence called Mag'na Græ'cia, or Great Greece),* and in the territory of Cyre'ne, or the Cyrenaïca, along the northern coast of Africa. Some outposts of Hellenic settlement were planted as far east as the shores of the Euxine Sea, and one colony arose in the extreme western part of the Mediterranean at *Massilia*, now Marseilles.

24. The establishment of so many colonies in countries pre-eminently favored by nature in productions and climate, and so situated as to prompt the inhabitants to navigation and commerce, gave a great impulse to the civilization of the Hellenic race, and may be regarded as the main cause of its rapid progress.

* See map opposite page 72.

25. The accompanying map represents the distribution of the several representatives of the Hellenic race, at the time when the great movements of population just spoken of had been accomplished (say about 1000 B. C.).

The map.

26. At this time the two leading races of Greece were the Ionians and the Dorians. These were distinguished from each other by striking characteristics, and the difference between them forms a chief feature of Grecian politics; it runs through their entire history, and was the principal cause of the deep-rooted antagonism between Athens, the representative of the Ionian race, and Sparta, the leading Doric state. The Ionians were remarkable for their democratic spirit; they

Character of the two leading races.

were vivacious, fickle, given to commerce, fond of refined enjoyments, and devoted to the fine arts. The Dorian race was noted for the severe simplicity of its manners ; it preferred an aristocratic form of government, and maintained slavery in its worst form.

27. The authentic history of Greece commences with the epoch known as the First Olym'piad, B. C. 776. *Beginnings of real history.* This era is the commencement of that consecutive chronology, which the Greeks reckoned by the series of victors in the foot-race at the four-yearly festival of Olympian Jupiter near E'lis. The First Olympiad began in the midsummer of 776 B. C. ; the Second Olympiad in midsummer of 772 B. C., etc., — the Olympiads recurring every four years.

28. Looking at Greece at this period, — say the middle of the 8th century B. C., — we find that an important change in the nature of the government had taken place. During the heroic age, in that "youth of the world" which Homer paints, the various Grecian tribes were under kings ; but now the government had become republican, and we find the people gathered together in little free states. (Sparta was the only state that held to even the name of king.) Each city, in fact, formed an independent commonwealth with its own little territory ; and there is no doubt that this parceling out of a small country was a main cause of the rapid development of political science in Greece.

29. Divided as the Greeks were politically, they were, nevertheless, united by a certain national feeling. *Hellenic unity.* The root of this was the consciousness that they were all Hellenes ; and this sentiment was fostered by the possession of a common language, literature, and religion, and of rites, temples, and festivals that were equally open to all. Still, the first feeling of every Greek was for his city, and there was scarcely even the sentiment of patri-

otism for Greece as a land. We shall soon see how imperfect was the union even against the pressing danger of subjugation by Persia, and what a long series of sectional contests was carried on between the leading states. The Greeks in the end discovered the great principle of *Federal Union*; but this was not till near the close of their history, when it was too late.

2. GROWTH OF SPARTA AND ATHENS.

30. In this section we shall glance at the history of the two most important Grecian states, namely, ^{Subject} Sparta and Athens; and we shall trace their ^{treated.} history down to the period when all Greece united against the Persians, about 500 B. C.

31. At the commencement of authentic Grecian history we find the Spartans the dominant power in ^{Sparta.} the Peloponnesus. They were a part of that great Dorian wave that about 1100 B. C. had overflowed the southern peninsula of Greece: the Dorians established and settled three states, Argos, Messenia, and Laconia, or Lacedæmon; but in time the Spartans, that is, the people of Laconia, or Lacedæmon, gained supremacy over the other states.

32. The ascendancy which Sparta acquired over the other states of the Peloponnesus was mainly owing to her peculiar institutions, which tradition ^{Lycurgus.} ascribes to a legislator named Lycurgus. Of this personage nothing is known whatever, and some have even denied his existence. It is probable, however, that Lycurgus did exist somewhere about 850 B. C., that is, about a century before the beginning of reliable history, and that he more clearly defined and fixed already existing usages and regulations.

33. But the peculiar constitution of the Spartans arose necessarily out of the circumstances in which they lived.

In other parts of the Peloponnesus the Dorian conquerors gradually fused with the native Achæans, but in Lacedæmon the separation was maintained.

Cause of Spartan peculiarities.

Such of the Achæans as readily submitted were allowed to retain their personal freedom, though without any political rights ; but the greater part were reduced to servitude, and were known as Helots. The citizens of Sparta were thus a small class of lords (estimated at 9,000 in the time of Lycurgus) among a tenfold number of slaves and subjects ; and to keep these in subjection their whole training was military.

34. The chief object of the legislation that goes by the name of Lycurgan was to create and maintain a vigorous and uncorrupted race of men ; hence it concerned itself less with political arrangements than with the regulation of private life and with physical education.

35. By this system weakly children were exposed to perish, while of those who were allowed to live the males were at the age of seven separated from their homes and trained by state educators. The whole time of the Spartans was spent in public. They took their frugal meals at public tables in messes or companies, to which each contributed so much from the produce of his land. Great attention was devoted to gymnastic exercises and military drill ; for the education of a Spartan, beginning with his seventh year, was not relaxed till his sixtieth. He was inured to hunger and thirst and to the extremes of heat and cold, and was taught to endure the keenest bodily torture without complaint. To teach him strategy and secrecy, there were licensed expeditions for thieving, and severe punishment was inflicted on him who allowed himself to be *detected* in it. Every one has heard of the Spartan youth who hid the stolen fox under his coat, and allowed it to tear out his vitals rather than

Spartan education.

expose it to view. Girls were trained in athletic exercises nearly similar to those of the boys, but separately. This reared a race of vigorous women, the influence of whose patriotism in sustaining that of the men is matter of historic celebrity. "Return either with your shield or on it!" was the exhortation of a Spartan mother to her son on his departure for the field of battle.

36. Spartan education produced warriors, but naught else: that people contributed nothing to the literature and the arts for which the world is indebted to Greece. Oratory was held in special contempt, and philosophy was superseded by those "wise saws," the brevity of which we still describe as *laconic*. Commerce was forbidden to the Spartan citizens, and iron money alone was allowed for their few trading transactions. The fine arts were discouraged as leading to effeminacy. The labors of agriculture were carried on exclusively by the Helots. Thus the Spartans resided in the city, where they passed their lives according to the Lycurgan discipline, while all the ordinary pursuits of civilized life were left to their dependents. This discipline no doubt made them intrepid soldiers, but as a people they were stolid, ungenerous, and cruel, even for those cruel times. Its results.

37. The constitution of Sparta was peculiar. At the head of the state were two joint-kings, who commanded the armies and performed the public sacrifices. But their power was often merely nominal, and was always restricted by the Senate and by the Assembly of all the Spartans. The Assembly annually elected five officers called Ephors, who as a general thing exercised all power; so that Sparta was really an oligarchic Republic, under the guise of a monarchy. Constitution of Sparta.

38. Sparta under the Lycurgan system became an aggressive military state: she conquered the Messenians (in two wars, 743-724 and 685-668) and the Spartans' conquests.

B. C.), humbled her powerful rival, the Argives (547 B. C.), and thus raised herself to the leadership of the Dorian Commonwealths. Having become the controlling power of the Peloponnesus, Sparta in the 6th century B. C. began to assume the right of interference in the internal affairs of the Grecian states beyond the Peloponnesus, and it is probable that she would have eventually brought all the states under her sway (for they were then in no condition to dispute her pre-eminence), had it not been that, at the time at which we have arrived, all the states were called upon to unite their arms against the aggressions of the Persians.

39. Parallel with the rise of Sparta was the growth of another state that was destined not only to push democratic freedom farther than any other Grecian state, but also to assert an intellectual supremacy over all Greece. This was Athens:—

“Athens, the eye of Greece, mother of arts
And eloquence, native to famous wits.”

40. It is known that the Athenians belonged to the Ionian race, of which indeed they were the flower. The founding of Athens runs back into the mythic period. At first the Athenians, like the other Hellenes, were under kings, but by the time that reliable Athenian history begins, we find that Athens had ceased to be under regal rule, Codrus being the last of the kings.

41. Athenian affairs, however, were not at this time managed by all the people, but only by a privileged class of nobles. Thus, though a republic, Athens was not at this time a democracy. The kingly power had given place to the office of *archon*: this was at first limited to the royal family and held for life; then it was held for ten years, and finally thrown open to the whole body of the nobles, the number of archons in-

creased to nine, and the period of office reduced to one year. There was also a Senate, afterwards called the Areopagus, but it was made up exclusively of the nobles. Thus we see that the great mass of the people had no share whatever in the government; and it happened at Athens, as generally happens where power is confined to one class, that the oligarchy abused their privileges.

42. The discontent of the people at length became so serious that a statesman named Dra'co was appointed in 624 B. C. to draw up a written code Laws of Draco. of laws. They were marked by extreme severity; for he affixed the penalty of death to all crimes alike, — to petty thefts no less than to sacrilege and murder. Hence Dra-co's laws were said to have been written, not in ink, but in blood; and we are told that he justified this extreme hardship by saying "that small offenses deserved death, and that he knew no severer punishment for great ones."*

43. The legislation of Draco failed to calm the prevailing discontent, the overbearing conduct of the aristocracy led to popular outbreaks, and there Revolution. came a state of anarchy, from which, at the beginning of the 6th century B. C., Athens was rescued by Solon. Solon had been chosen one of the archons, and was commissioned to remodel the Constitution of Athens, 594 B. C. The successful manner in which he performed this work laid the foundation of the happiness of his native country.

44. The main object of the constitution of Solon was to abolish the oppressive aristocracy and to sub- Laws of Solon. stitute for it a *moderate* government, which should admit all Athenian citizens to a share of power, but give a preponderating influence to the higher orders. Solon's legislation was marked by great political sagacity, and under it Athens made rapid progress in prosperity;

but it was far from satisfying his contemporaries. Like most moderate politicians, he was accused by one side of going too far and by the other of not being radical enough.

45. The result was a struggle of parties, which ended in the seizure of power by a leader named Pisis'-
 Pisistratus. tratus, who (560 B. C.) assumed the position of Dictator, or, as the Greeks called it, Tyrant,—a term which, however, denoted merely one who *usurped* power, not necessarily one who *abused* power. There is no reason to believe that the constitution of Solon was abolished under Pisistratus. Athens continued to enjoy its republican government, though under a dictator. Pisistratus ruled mildly, encouraged the arts and edited Homer, and even succeeded in transmitting his power to his sons; but after half a century of this mild tyranny, the family of the Pisistrat'idæ were banished, 510 B. C.

46. A noble named Clis'thenes now rose into power. He
 Reforms of espoused the cause of the people, gave the
 Clisthenes. suffrage to all free inhabitants, and introduced into the constitution political reforms to which very much of Athenian greatness is attributable. Under the new constitution the state was a pure democracy, and the establishment of liberty and equality gave a great impulse to the spirit of patriotism. The result was that Athens soon rose to be the leading state of Central Greece.

47. At the period at which we have now arrived, — the
 The new beginning of the 5th century B. C., — Greece
 epoch. had put on the shape which she was to wear during the greatest times of her history. At this time a new era in Hellenic history begins. The Greeks had to bear the trial of a great foreign invasion. Europe, embodied in Greece, was to meet old Asia, represented by Persia, and the sons of Hellas were to come out of the struggle strong and ennobled.

CHAPTER III.

HISTORY OF THE SECOND PERIOD.

FROM THE BEGINNING OF THE PERSIAN WAR TO THE VICTORY OF PHILIP
OF MACEDON AT CHÆRONEA, B. C. 500-338.

I. THE PERSIAN INVASIONS.

48. We have already seen how the great Eastern Monarchy, founded by Cyrus and extended by Cambyses, was consolidated by Darius, who became king of Persia in 521 B. C. Among the conquests of Cyrus was the kingdom of Lydia, in Asia Minor. Now, just before the Persian conquest of Lydia, the king of that country, Cræsus, had succeeded in reducing under his own dominion the Greek cities on the coast of Asia Minor; so that now they, too, became subject to Persia.

49. The Ionian cities did not submit without a struggle, and after a certain time there ensued a general revolt of these cities, 500 B. C. The Athenians, to help their kinsfolk in Ionia, sent twenty ships with a small force. A landing was made on the coast of Asia Minor, and Sardis, the capital of Lydia, was captured and accidentally burnt, 499 B. C.

50. This sally had only the effect of drawing down the wrath of Darius on the Ionian cities, and the revolt was soon quelled (494 B. C.). The Persian monarch then resolved to chastise the Athenians. When the news of the burning of Sardis was brought to Darius, he called for his bow, and shot an arrow towards the sky, with a prayer to Auramazda for help to revenge himself on the Athenians. Then he bade one of his servants repeat to him thrice daily, as he sat down to dinner, the words, "Master, remember the Athenians!"

51. In execution of his purpose, Darius instructed his son-in-law, Mardo'nius, to march an army against the Athenians. The force advanced through Thrace into Macedonia, which was speedily subjugated, but it was able to go no farther; and a fleet which had been sent to co-operate was shattered by a great storm off the peninsula of Mount A'thos, so that Mardonius returned to Asia Minor in disgrace, 492 B. C.

52. This failure only added fury to the resolution of Darius. While pushing forward his preparations for the invasion of Greece, he sent round heralds to the chief Grecian cities to demand the tribute of earth and water as signs of his being their rightful lord. The island states generally made their submission, as did

also many of the continental states, and it seemed that the young civilization of the West was to be overwhelmed by Eastern despotism. But the genius of Hellas found noble champions in two of the states; for Athens and Sparta indignantly rejected the demand, and their conjunction drew after them most of the lesser states in a defensive league.

53. It was time for Greece to be united, for in the spring of 490 B. C. the preparations of Darius were complete. A vast force, under a commander named Datis, sailed in 600 triremes from Samos across the Ægæan, reducing the Cyclades islands on the way, and after capturing Eretria in the island of Eubœa, made a landing in the bay of Marathon, on the east coast of Attica. The Persians now prepared to advance on Athens.

*Invasion of
Greece.*

54. But this was not to be without a struggle, and the plain of Marathon was the scene of the conflict, one of the most important and momen-

Marathon.

tous in history. There, between the mountains and the sea, the little Athenian force of 10,000 men, unaided save by 600 men from Plataea, but led by the genius of Miltiades and inspired by high patriotic daring, met a Per-

sian army of ten times its number, and defeated it, — September, 490 B. C.

55. The Persian monarch was not able immediately to renew hostilities with the Greeks, for other affairs engaged his attention; and when Darius finally found himself free to resume his purpose, he was cut off by death, 485 B. C. His son Xerxes succeeded to the throne, and promptly took up the task. The result was another and far more formidable invasion, made ten years after the battle of Marathon.

The sequel.

56. During this interval of ten years the Athenians were not idle. At this time the leading men at Athens were Themis'tocles and Aristi'des. Aristides was a pure patriot, but he was considered stubborn and impracticable. Themistocles, on the other hand, was a sagacious statesman: he urged that the Athenians should bend their energies to preparing against a renewal of the invasion by the Persians, and especially that a navy should be created; Aristides opposed this policy. Between these two leaders there was a long rivalry; but finally Aristides was ostracized.* Under the vigorous counsels of Themistocles, the Athenians bent their energies to preparing for the impending conflict, and especially to building a great fleet of triremes. Then, as the note of preparation for the invasion sounded throughout all Asia, a general congress of the Grecian states summoned by Athens and Sparta was held at the Isthmus of Corinth. Though several of the states stayed away through fear, yet this was a truly national meeting; and it was resolved that Sparta should be the head of the league against Persia.

* The institution of *ostracism* was a method which the Athenians had devised for the purpose of getting rid of obnoxious public men, and was in some respects a very good plan, as it stopped interminable quarrels between rival politicians. It derived its name from the fact that the citizens, in voting for its infliction, wrote the name of the objectionable person on a shell (*ostrcon*), and if there was a majority of votes for his banishment, he was exiled for ten years. The conflict between Aristides and Themistocles became at last so sharp that the Athenians finally voted to ostracize Aristides. Among those who voted were many, no doubt, whose hostility had been aroused by the stern probity of Aristides, who was known as "the Just." The story is true to nature, that when the vote of ostracism was being taken, an unlettered citizen, not knowing Aristides, asked him to write for him on the shell. "And what name shall I write?" "Aristides." "And, pray, what wrong has Aristides done you?" "O, none; but I am tired of always hearing him called the Just."

57. From every part of his wide dominion Xerxes collected at Sardis an army such as had never been seen before. For transporting it into Europe he caused a double bridge of boats to be built across the Hellespont, where it is a mile wide ; and in 480 B. C. the vast host (Herodotus puts it at 2,500,000 fighting men and ships' crews) crossed the bridge in two columns, taking seven days and nights to make the passage. A great fleet consisting of 1200 triremes (each manned by 200 rowers and 30 fighting men) and many smaller vessels pursued its course northward to the Hellespont, and then steered westward, keeping close to the coast so as to be in constant communication with the army. Meanwhile the prodigious array, having entered Europe, advanced westward through Thrace and Macedonia, and then turning southward through Thessaly, poured itself in a mighty deluge over the northern states of Greece and moved towards Attica.

58. The Greeks resolved to take their stand in a narrow mountain-gorge lying between the precipitous mountains of Eta and a marsh forming the edge of the Gulf of Malis. [See large map, p. 73.] This is the celebrated Pass of Thermopylæ.* It was, however, only a small force that was sent to the defense of Thermopylæ. When the arrival of Xerxes in Northern Greece became known, the Greeks were upon the point of celebrating one of their religious festivals, and not wishing to give up the solemnity, they resolved to send merely men enough to hold the pass till the festival was over, when they would be able to march in full force. The defense of the position was intrusted to the Spartan king, Leonidas, with about 7,000 troops, the flower of which consisted of 300 Spartans.

* Literally, *gates of the hot springs*: the pass contains several hot springs, and the *pylæ*, or gates, are the two openings of the pass.

59. When the Persian host reached Thermopylæ and sought to force the pass, the Grecian guard made a stout defense, and for two days kept the enemy at bay; but on the third day a traitor pointed out to the Persian king how, by taking a mountain-path, the position of the Greeks might be "turned." When this movement became known, most of the Greek officers wished

to withdraw, since the position was no longer tenable. But Leonidas refused to retreat. As a Spartan he was bound by the laws to conquer or to die in the post assigned to him. His

three hundred Spartans were moved by the same feeling, and seven hundred Thespians resolved to share their fate. The rest of the allies were allowed to retire. This being done, Leonidas and his comrades determined to sell their lives as dearly as possible: so they advanced into the open space in front of the pass and charged the Persians with desperate valor. But this heroism was in vain; for their spears were ere long broken, and the enemy, pouring in from front and rear, surrounded the Greeks on all sides. Leonidas fell, and the heroic band were killed to a man. The date of the battle was August, 480 B. C.

60. The Greek fleet, as we have seen, had taken position off the northern coast of the Island of Eubœa. Naval affairs.

Here a brisk naval action was fought, which, though indecisive, helped to raise the courage of the Greeks. It seemed, too, as though the gods were on their side, for in two great storms nearly half the Persian fleet was shattered. When, however, it became known to Themistocles, the commander of the Grecian fleet, that the Pass of Thermopylæ had been carried and that the enemy was advancing on

Athens, he withdrew the fleet southward to the Bay of Sal'amis, near Athens.

61. The news of the approach of Xerxes created great consternation at Athens; but the oracle told the Athenians that they must seek safety in their "wooden walls." This was interpreted to mean their ships. Accordingly the whole population was removed from the city, and the Persians took possession of Athens and reduced it to ashes. Matters at Athens.

62. The fate of Greece was to be decided by a glorious naval combat. In the Bay of Salamis the Greeks had assembled their whole fleet of 366 ships. Though the Persians had lost heavily by storm, they had still about 1000 vessels, and two months after the battle of Thermopylæ the opposing fleets were arrayed for the fight. The Persian army was drawn up along the shore, and the Eastern monarch, anticipating a brilliant victory, took his seat on a lofty throne, on a promontory overlooking the scene. Battle of Salamis.

"A king sat on the rocky brow
Which looks o'er sea-born Salamis;
And ships by thousands lay below,
And men in nations, — all were his.
He counted them at break of day,
And when the sun set, where were they?"

63. Salamis was a complete victory for the Greeks; the Persians lost over 200 ships, and Xerxes, struck with cowardice, beat a retreat into his own dominions by the route on which he came, October, 480 B. C. Result.

64. When Xerxes retired he left behind a force of 300,000 under one of his generals, named Mardonius. The following year a decisive combat, in which the Greeks were completely successful, was fought at Plataea between this force and a Greek army of 70,000 Plataea and Mycale.

men under the Spartan leader Pausanias and the Athenian leader Aristides, September 25, 479. On the same day a battle at Myc'ale (in Asia Minor) effected the destruction of the remnant of the Persian fleet.

65. These three battles, Salamis, Plataea, and Mycale, decided the war, and the Persians never again dared to invade Greece itself. The struggle, it is true, went on for several years longer before the Persians were dislodged from the various posts which they held north of the Ægæan; but at last they were driven wholly out of Europe. Thus it was that the liberties of Greece were secured, and it must be remembered that the preservation of Grecian independence meant the preservation of the civilization of Europe.

Later events.

2. THE AGE OF PERICLES.

66. The half-century following the battle of Salamis (480-430 B. C.) forms the most brilliant period of Athenian history, and one of the most illustrious eras in the history of the world. It is usually called the "age of Pericles," its duration nearly coinciding with the public life of that statesman who for forty years, though merely a private citizen, held a controlling influence over the politics of Athens.

Period of Pericles.

67. The main cause of the ascendancy which Athens now assumed was the brilliant part played by that state in the Persian wars. To preserve the freedom of the now liberated Greek cities on the islands and coasts of the Ægæan, a league was formed of which Athens, from her naval power, became naturally the leader. The inland states meanwhile clung to Sparta. It soon came about that the maritime cities were brought into a sort of subjection to Athens; the Athenians denied the right of the states to secede from the confederation, caused the separate

Policy of Athens.

treasury of the league to be merged in that of Athens, and employed the ships and money of the allies in prosecuting their own aggrandizement. If this was short-sighted policy, it at least put the Athenians in an almost imperial position for the time being, and carried forward the little democracy to a wonderful degree of power and splendor.

68. It was during this period, when the Athenian intellect was stimulated by a proud sense of national greatness, that Grecian genius put forth its richest blossoms of literature and art. This was the age of grand dramatic composition, and of the greatest works of architecture and sculpture. Oratory, which is so powerful an instrument in a free state, was now cultivated assiduously, and the Athenians became accustomed to hearing the purest lessons of patriotism put forth in the loftiest forms of eloquence. In fine, the Athenian commonwealth under the exertions of Pericles attained such an exalted state of cultivation that it is recorded that the citizens were almost all equally qualified to fill offices or discharge business; so that the regulation, that the greater part of the public offices should be filled by lot, rarely resulted in the choice of any but able and well-qualified men.

Sketch of the period.

69. It was in this age that, on the other hand, the seeds were sown of that terrible civil strife that rent the glory of Greece; for Pericles himself lived to see the outbreak of that direful conflict known as the Peloponnesian War.

Beginning of strife.

70. This great man, one of the very ablest statesmen that ever lived, fell a victim to a pestilence that raged in Athens in 429 B. C. His death-bed was surrounded by his friends and admirers, who recited the many illustrious exploits of his glorious life. "You forget," said the dying patriot, — "you forget the only valuable part of my character: none of my fellow-citizens was ever compelled by any action of mine to assume a mourning robe."

Pericles.

3. THE PELOPONNESIAN WAR.

71. The Peloponnesian war was a conflict between Athens and her allies, on the one hand, and Sparta and her allies, on the other. It began in 431 B. C., lasted twenty-seven years, and ended in weakening Greece generally, and in completely destroying the Athenian ascendancy.

72. This war was occasioned by the jealousy which the great power of Athens stirred up among many other of the Greek cities; but it had in reality a deeper cause: it was the outbreak of an "irrepressible conflict" between Ionians and Dorians, between democracy and oligarchy, — Athens being the chief of the Ionian and democratic states, and Sparta the chief of the Dorian and aristocratic states.

73. The immediate occasion of the war was a conflict between Corinth and one of her colonies, Corcy'ra. Siding with the latter, Athens excited the wrath of the Dorian Confederacy; and a Spartan army invaded Attica, 431 B. C. During the first ten years of the war, down to 421, the two parties contended with nearly equal success, the Athenians being much the stronger by sea, and the Spartans and their allies by land. A peace was then concluded, called the "Peace of Nicias" (421 B. C.), which was to last for fifty years; but as many of the confederates were dissatisfied with its terms, it was not likely to be of such long duration, and indeed hostilities were renewed almost immediately.

74. The renewal of the war was precipitated through the political influence of Alcibi'ades, a handsome, dissolute young disciple of Socrates: he possessed brilliant talent, but he was ambitious, and he was eager to renew the war, as affording him an opportunity of personal distinction.

75. Alcibiades brought forward a scheme of conquering Syracuse, a city in Sicily. It was a bold Syracusan expedition. scheme, and its successful execution would have given a great preponderance to Athens over Sparta. The Athenians adopted the plan, and in B. C. 415 sent a fleet and force against the Syracusans. Sparta sent aid to the Syracusans, and thus the Peloponnesian war was renewed. In the midst of the enterprise Alcibiades was recalled to Athens on a charge of impiety ; but he managed to escape, and went over to Sparta. The Syracusan expedition proved a total failure (413 B. C.), and greatly damaged the power of Athens.

76. During the last eight years the Peloponnesian war was carried on mainly at sea, off the coast of Asia. Sparta allied herself with Persia, and Closing years. it was Persian gold that afforded Sparta the means to continue the contest against Athens. Athens, however, made a bold front, and under the lead of Alcibiades (who had meanwhile been recalled to the command) kept up the contest with wonderful vigor. But a fatal blow fell when the Spartan admiral, Lysander, surprised the beached galleys of the Athenians at *Ægos Pot'amos* in the Hellespont, B. C. 405. The siege and surrender of Athens in the following year brought the great Peloponnesian contest to an end.

77. The result of the Peloponnesian war left Sparta the greatest power of Greece. Athens sank into Result of the war. the background as a second-rate state ; still, while she lost her political supremacy, she became more and more the leader in literature, art, and philosophy.

4. PERIOD OF SPARTAN AND THEBAN SUPREMACY.

78. After the decline of Athens Sparta stood without a rival in Greece, and for thirty-four years (from Spartan supremacy. the victory at *Ægos Potamos* to the defeat of

Leuctra, 405–371 B. C.) the Lacedæmonians exercised an undisputed sway in Greece. The Spartan dominion was extremely despotic, and the Greek states that at the beginning of the Peloponnesian war had sided with Sparta as a “liberator” from Athenian rule now found the Spartan yoke much more galling than the Athenian had been.

79. Meantime in Thebes a new power was arising that was to curb her pride. The greatness of **Rise of Thebes.** Thebes was the work of two men,—Epaminondas and Pelopidas,—who knew how to inspire their fellow-citizens with their own heroic spirit. To revenge themselves for the insults of Sparta, the Thebans, under these leaders, began a long and heroic struggle. The decisive combat of this war was fought at Leuctra, where Epaminondas utterly defeated the Spartans, 371 B. C. In consequence of this defeat Sparta fell suddenly and forever from her high estate.

80. Thebes now rose to be the leading state of Greece, and this position she held as long as her great **Theban supremacy.** chieftain, Epaminondas, lived. But in the battle of Mantinea (362 B. C.), waged against the Spartans and Athenians, the Theban chieftain died in the arms of victory. With the fall of Epaminondas Thebes herself fell, for there was no one to take his place.

81. The struggle between Sparta and Thebes, following **Effect of the wars.** as it did the great Peloponnesian war,—in both of which nearly all the Hellenic states were engaged,—resulted in the general exhaustion of Greece. What strength remained was expended in mere intestine broils, and soon after this Greece fell an easy prey to Philip of Macedon.

CHAPTER IV.

HISTORY OF THE THIRD PERIOD.

FROM THE VICTORY OF PHILIP TO THE ABSORPTION OF GREECE BY THE ROMANS.

I. SUPREMACY OF MACEDON.—PHILIP.

82. THE Macedonians, though closely allied by race to the Greeks, had remained in obscurity while their southern kinsmen were pursuing their stirring career. But in the middle of the 4th century B. C. they came under a bold and energetic chief. This was Philip, son of Amyntas II.

83. Philip assumed the government of Macedonia in 359 B. C. He was well acquainted with Grecian politics, having as a young man resided at Thebes in the character of a hostage, and when he became king he set on foot a plan for the elevation of Macedonia. This was not by any means to conquer Greece, but to have Macedonia recognized as a Greek state, and then to make it the *leading* state of Hellas, — just as Athens, Sparta, and Thebes had successively been.

84. Philip commenced by craftily mixing himself up with Greek affairs ; and he managed with such skill that at last he was acknowledged as a member of the Amphi'ctyonic Council, the great religious assembly of Hellas, — a concession equivalent to the recognition of Macedon as a Greek state. Step by step his ambition grew, till he began to think of a grand scheme of conquest.

85. This plan the great Athenian orator Demosthenes clearly perceived, and he commenced uttering the thunder of his voice in warnings ; but the Athenians had lost much of their patriotic ardor, so they took these warnings but tardily.

86. The direct aggressions of Philip on Athens commenced about 358 B. C., and for twenty years he continued a mixed policy of war and intrigue, which at length made him master of Greece. In 338 B. C., at Chærone'a (in Bœotia), he won a decisive victory over the Athenians and Thebans; this crushed the liberty of Greece, and made it in reality a province of Macedonia.

87. The main causes of Philip's wonderful success were twofold, — 1. His admirable military organization: the Macedonian phalanx, invincible until it came to be opposed to the Romans, was his creation. 2. His political finesse: taking advantage of the divided condition of Greece and of the general prevalence of corruption, he played off state against state, politician against politician, promising, cajoling, bribing, threatening, so that he won even more by diplomacy than by force.

88. Philip now announced his intention of uniting all the forces of Hellas to make war on Persia, and avenge the old invasions of Greece by Darius and Xerxes. This was a very skillful stroke of policy on the part of Philip; it diverted the minds of the Greeks from the thought of the loss of their independence, by filling their imaginations with the glorious vision of a great *national* enterprise of the Hellenes against the barbarians.

89. The design, however, was not executed; for in the midst of the preparations Philip was assassinated by one of his own subjects (336 B. C.), at the age of forty-six, after a reign of twenty-three years.

2. CAREER OF ALEXANDER THE GREAT.

90. Philip was succeeded by his son Alexander, known as Alexander the Great. At the age of twenty he became heir to his father's power, and of far more than his father's military genius. He was imme-

diately acknowledged generalissimo of Greece against the Persians, as his father had been. In the year 334 he set out on his great expedition, and as he never returned to Macedonia or Greece, we must now turn our eyes away from Greek history proper, and follow the marvelous career of the youthful conqueror.

91. Alexander crossed the Hellespont with a small army of 35,000 men, and advanced to the *Granicus* (in Asia Minor). Here a Persian army somewhat larger than his own was met and defeated, B. C. 334. He then passed victoriously through the Persian provinces of Asia Minor, and entered Syria. At *Issus*, near the borders of Cilicia and Syria, a vast Persian army under Darius Codoman'nus was met. The nature of the ground was such that the Persian superiority in numbers did not tell; Alexander here won a signal victory (333 B. C.), and Darius fled, leaving his mother and his wife captives.

His first victories.

92. Alexander did not immediately follow up the Persians, but proceeded from Issus against Tyre, Gaza, and Egypt, at this time under the dominion of Persia. Twenty months sufficed for the reduction of these places. The foundation of the great seaport Alexandria, — an act of far-sighted policy on the part of Alexander, — was a result of his sojourn in Egypt.

His next operation.

93. Having possessed himself of all the maritime provinces of Persia, Alexander, in B. C. 331, proceeded to seek his enemy in the heart of his empire. The final conflict took place at *Arbe'la* in Assyria.* Here Darius had chosen his ground and arrayed the full force of his empire. But the Asiatic soldier was inferior to the European, and the invading force was led by a consummate military genius. The result was the complete overthrow of a Persian force of a million men by less than

Battle of Arbela.

* Though the action bears the name of Arbela, it was in reality fought at Gaugame'la, a village 20 miles distant.

50,000 Greeks (B. C. 331). So decisive was the victory, that the three capitals of the empire, Babylon, Susa, and Persepolis, surrendered almost without resistance; and the Persian monarch became a fugitive, and was ere long assassinated.

94. Thus at the age of twenty-five Alexander saw himself lord of Western Asia. But the most remarkable part of the conqueror's career was now to begin. Instead of settling down in the luxurious capital of the East, he was urged by an irresistible impulse to press on, so long as there were lands or men to conquer.

95. To the east of Persia lay a new and unknown world, believed to be one of immense wealth, and he resolved to penetrate it. Half exploring, half conquering, he pushed his way into the mysterious Orient as far as the river Hyph'asis (the modern Sutlej) in Northern India (326 B. C.).* He subdued the princes that were found reigning here, and then desired to press eastward and complete the subjugation of the continent, which was believed to terminate at no great distance.

96. His soldiers, however, refused to go any farther than the Hyphasis; so he had to prepare to return homewards. It is a proof of his inventive genius, that in place

* See the route of Alexander on the map opposite page 55. From Persepolis he went to Ecbat'ana, thence eastward through Media, Hyrcania, Parthia, and Aria, founding in the latter a city of Alexandria (modern Herat); then southward through Drangia'na; then (late in 330) northeastward through Arachosia, founding there Alexandrop'olis (modern Candahar?); then northward across the range of the Paropamisus or Hindoo Koosh, across the Oxus River, and (early in 329) traversing Bactria'na and Sogdia'na to the capital of the latter, Maracanda (modern Samarcand); then northward to the Jaxartes River, where he founded Alexandria Eschate (i. e. the *last* or *farthest*); then back again, scouring Sogdiana and Bactriana in various directions; then, in 327, southeastward from Bactriana to the Indus, which he crossed at Tax'ila; then eastward to the Hydas'pes, founding Buceph'ala and Nicæ'a, and finally to the Hyph'asis.

of retracing his steps he went back by an entirely new path. He built a fleet to sail down the Hydaspes and the Indus, while the bulk of his army ^{Return from India.} marched down their banks. Reaching the Indian Ocean, Alexander sent his admiral, Near'chus, with the fleet, round to the Euphrates; he himself led his army overland through the desert region of Gedro'sia (Beloochistan) and Carma'nia into Persia. Though his army suffered terribly in the desert, yet Alexander brought back the greater part of his force to Persepolis (324 B. C.), and began to prepare for new enterprises.

97. The plans of Alexander were brought to an end by the sudden death of their projector, at Baby- ^{His death.} lon, at the age of thirty-three (B. C. 323).

COIN OF ALEXANDER.

Thus cut off in the vigor of early manhood, he left no inheritor either of his power or of his projects. When asked on his death-bed to whom he left the empire, he said, "To the strongest." But there was none strong *enough*. Thus the vast dominion broke into fragments soon after his death, and his daring schemes of policy and

conquest were buried in his grave.

98. Though the great empire of Alexander broke in pieces almost at once, yet the effects of his ^{Result of his conquests.} career have remained to all time. One great result was the *Hellenizing* of the conquered lands, that is, their assimilation to Greek ideas and Greek civilization. "The Greek language became the tongue of all government and literature throughout many countries where the people were not Greek by birth. It was thus at the very moment that Greece began to lose her political freedom that she made, as it were, an intellectual conquest of a large part of the world."

3. ALEXANDER'S SUCCESSORS.

99. The great empire of Alexander, as has been said, fell to pieces after his death, and the generals who had fought under him contended fiercely during twenty years for the fragments. In the year 301 a decisive action took place at Ipsus in Phrygia, the result of which gave Syria and the East to Seleucus, Egypt to Ptolemy, Thrace to Lysimachus, and Macedonia to Cassander. Of the various kingdoms founded by these men, two are of special interest, — the kingdom of the Ptolemies in Egypt and the kingdom of the Seleucidæ in the East.

100. Egypt fell to the lot of Ptolemy, one of Alexander's generals, known as Ptolemy Soter. He was an energetic monarch, and during a long reign (323–283 B. C.) ruled Egypt, on the whole, well. The Greeks and the Macedonians whom he carried with him or who emigrated to Egypt were the ruling race; but the Egyptians were not oppressed, for many of the civil rulers were natives, and particular respect was paid to the old Egyptian religion.

101. Ptolemy I. was followed by a series of monarchs also called Ptolemies down to the time of Queen Cleopatra, the last of the line of the Ptolemies. On her death (30 B. C.) Egypt became a Roman province.

102. The history of Egypt during the three centuries of Ptolemaic rule is mainly the history of Alexandria, which was made the capital, and which soon became a great and flourishing city. Literature, philosophy, and the arts were assiduously cultivated; the great Alexandrian Library was swelled to 500,000 volumes, and a novel and peculiar culture and civilization — a mingling of Greek, Egyptian, and Jewish — arose on the Nile banks, under the paternal despotism of the Ptolemies.

103. The kingdom of the Seleucidæ was founded (312 B. C.) by Seleucus, another of Alexander's generals. At first the kingdom consisted merely Kingdom of Seleucus. of Babylonia and the adjacent regions, Susiana, Media, and Persia; but Seleucus afterwards made himself master of all the countries lying between the Indus and Euphrates on the one hand, and the Jaxartes and the Indian Ocean on the other. A still further addition was soon made in nearly all of Asia Minor. Seleucus now removed his capital from Babylonia to the newly founded Greek city of Antioch in Syria.

104. Seleucus, who died by assassination in 280, was followed by a succession of kings known as the Seleucidæ, who for about two centuries ruled Later history. over the kingdom he had founded. This portion of history, however, is not specially instructive, and the kingdom of the Seleucidæ was of no considerable importance in the history of civilization. The two centuries are filled with the stories of wars and revolts, in the midst of which the kingdom gradually lost its huge proportions; its remnant was finally conquered by Pompey and absorbed into the Roman Empire in the year 65 B. C.

4. LATER HISTORY OF MACEDON AND GREECE.

105. We now return to what took place in Macedon and Greece subsequently to the death of Alexander the Great in B. C. 323. On the death of Alex- Greece resists Macedon. ander, the Greeks were inspired by high hopes of bursting the chains which bound Hellas to the footstool of the Macedonian kings. Athens, under Demosthenes and Hyperides, took the lead: they formed a confederacy of the Greek states, and entered on what was called the "Lamian war" (323 - 321 B. C.). But the confederates were unsuccessful, and the yoke of Macedonia was riveted on them more firmly than ever.

106. The last days of Grecian history, before the country came altogether under the power of the Romans, are distinguished in several ways from the times which went before them. The chief powers of Greece now were Macedonia, Achæa, Ætolia, and Sparta: Macedonia, for reasons that will readily be known; Achæa and Ætolia, from a new fact in the politics of Greece, namely, the formation of Federal Leagues of States.

107. The nature of these leagues was similar to the federal union of the States of Switzerland and of our own Republic; that is, there was an agreement on the part of several states to give up part of their power, and especially their control of questions of peace and war, to a general government in which all had a share. These leagues now came to be of special weight in Greek politics, since it was found that as long as the cities stood one by one they had no chance of keeping their freedom against the Macedonian kings. The most important of these federal unions were the Achæan (formed in 280 B. C.) and the Ætolian Leagues. Besides these two great federations, there were smaller unions; so that, with the exception of Sparta at one end and Macedonia at the other, the greater part of Greece was parted out among the different leagues.

108. These confederations of the Greek States subserved a useful purpose, as they enabled them to preserve a front of independence against Macedon. Under Ara'tus and Philopœ'men,—two patriots of the kind that Hellas had produced in her glorious times,—the States of the Achæan League rose to a considerable eminence (245–213 B. C.); but the jealous selfishness of Sparta once more led to discord and strife, and the Macedonian king, being called in as umpire, was once more master.

109. But Macedon itself was about to be swallowed up by

a yet greater power, — by Rome. It was at this time, as we shall presently see, that the Romans, having broken the power of Carthage, turned their ambition eastward. After a long conflict (200–168 B. C.) the Macedonian kingdom was overthrown at the battle of Pydna, 168 B. C., and Perseus, the last of the Macedonian kings, adorned as a captive the triumph of a Roman general.

III. After this event the Greek republics were for a short time left independent; but, quarreling once more among themselves, they were finally reduced to a Roman province under the name of *Achaia*.

III. The intellectual history of later Greece was of a different character from that of its glorious period. There was more of scholarship, but less of creative genius. We have seen that the Oriental conquests of Alexander and the Greek rule in the new kingdoms of the East tended to Hellenize Asia; but there was a reflex influence of Asia on Hellas herself. The Oriental habits of servility and adulation superseded the old free-spoken independence and manliness; patriotism and public spirit waned; literature lost its vigor; art deteriorated, and the people sank into a nation of pedants, parasites, and adventurers.

“’T was Greece, but living Greece no more!”

ANALYTIC SYNOPSIS FOR REVIEW.

Three Periods of Greek history.	{	First Authentic Period, — from the Dorian migrations to the beginning of the Persian Wars, B. C. 1100–500.
		Second Period, — from the beginning of the Persian Wars to the victory of Philip of Macedon at Chæro-neæ, B. C. 500–338.
		Third Period, — from the victory of Philip to the absorption of Greece by the Romans, B. C. 338–146.

First Period, B. C. 1100 - 500.

General
Summary.

The Heroic Age ended with a general migration of the tribes of Greece, the settlement of the Dorians in the Peloponnesus, and the establishment of colonies on the shores of Asia Minor and elsewhere. In the succeeding three or four centuries the Spartans, under the form of government established by Lycurgus, became the leading state of the Peloponnesus, conquering the Messenians and others. Athens meantime had become an oligarchy. A more moderate government was established by Solon; however, contentions were frequent, and Pisistratus seized power, which remained with his sons, till the Pisistratidæ were expelled, and Athens became a pure democracy.

General
Summary.

The Ionian Greeks in Asia Minor revolted from Persia, and Athens lent them aid. Accordingly Darius sent Mardonius against Greece; but he advanced no farther than Macedonia, his fleet being destroyed by a storm. Then Darius sent a vast force under Datis, but it was defeated in the battle of Marathon. Darius having died, his son Xerxes moved on Greece with an immense army and fleet: he was successful at Thermopylæ, and took Athens; but was defeated at Salamis, and the remaining force at Plataea and Mycale,—which caused the Persian scheme wholly

to fail. The half-century following the battle of Salamis was the most brilliant period of Athenian history (age of Pericles); but the greatness of Athens led to the Peloponnesian war. This was interrupted by the Peace of Nicias; but, being renewed, the Athenians were beaten in various engagements, and finally defeated at Ægos Potamos: so the result of this war was the ascendancy of Sparta. Sparta continued prominent till her defeat at Leuctra. Thebes now became for a while the leading state; but Greece, rent by dissensions, was soon subjugated by Philip of Macedon, in the battle of Chæronea.

General Summary.

CHAPTER V.

GRECIAN CIVILIZATION.

I. POLITICAL IDEAS.

112. THE history of Greece, though the history of but a small part of the world for a brief period (the grand age is limited to the century and a half between the battle of Marathon, 490 B. C., and the triumph of Philip of Macedon, 338 B. C.), is of permanent interest, for the reason that the Greeks were the first people to show the world what real freedom and real civilization are. It has been said that in the Grecian commonwealths "the political and intellectual life of the world began."

113. The great contribution given by Greece to the world's civilization was the practical example of free, self-governing states. In the Oriental nations the only government was despotism: there was an absolute lord, and there was a mass of subjects or slaves, but no *people* in a political sense. It was left for the Greek states to give an illustration of democracy, — "the government *of* the people, *for* the people, *by* the people." This was a great fact: it is only in an atmosphere of freedom that the human mind can expand and that *progress* is possible, for political liberty means intellectual liberty; so that, without this, the germs of Hellenic genius would probably never have borne their rich fruitage of literature and art.

2. RELIGION.

114. Though the Greeks never rose to the exalted Hebrew conception of one God, yet their religion was much

in advance of the dark and often cruel superstitions of most of the ancient nations. They were polytheists, but, as they looked on the gods as their personal friends, their paganism was a religion of love, whereas Asiatic paganism was a religion of fear. Greek and other paganism.

115. The religion of the Greeks received its peculiar form from the beautiful fictions of the poets, especially of Homer and He'siod. Thus their mythology was an inexhaustible treasury of highly ideal conceptions which the chisel and the pen of artists and poets embodied in forms of immortal grandeur and loveliness. Its poetic character.

116. In the Grecian *theogony*, or history of the gods, the earliest events that are described are the proceedings of certain gigantic agents, — the collision of certain terrific forces, which were ultimately reduced under the more orderly government of Zeus, or Jupiter, with whom begins a new dynasty, and a different order of beings. Greek theogony.

117. Zeus divided the sovereignty with his two brothers, — Posei'don (Neptune) and Hades (Pluto). He retained for himself the ether and the atmosphere, together with the general presiding function. Poseidon obtained the sea, while Hades ruled the world of shades. These deities, with their sisters and divine progeny, comprehended the gods worshiped by the early Greeks. *Twelve* were especially called the great Olympian gods, being supposed to dwell on the heights of Mount Olympus and to form the divine *ag'ora*, or council of the gods, which was held there. Dynasty of Zeus.

The student will here find the names and chief attributes of the Olympian divinities, together with the Latin names, by which they are more generally known.

- 1.** Zeus, or *Jupiter*, the chief and father of the gods. He is always represented as seated on a throne with the thunderbolts in his right hand, and an eagle by his side.

2. **Po-sei'don**, or *Neptune*, the earth-shaker and ruler of the sea : his symbol is a trident.
3. **A-pol'lôn**, or *Apollo* (called also *Phœbus Apollo*), the divinity of poetical inspiration, of song and music. He was figured as the *beau idéal* of manly beauty. (Statue of Apollo Belvedere discovered in 1503.)
4. **Ar'te-mis**, or *Diana*, the huntress among the immortals, the divinity of flocks and of the chase. As twin-sister of Apollo, she was the divinity of the moon.
5. **He-phais'tos**, or *Vulcan*, the god of terrestrial fire : he is represented as a blacksmith.
6. **Her'mes**, or *Mercury*, the messenger of the gods ; the god of eloquence, and the protector of trade : he is marked by his winged sandals, and by his *caduceus*, or wand.
7. **A'res**, or *Mars*, the god of war, delighted in the din of battle, the slaughter of men, and the destruction of towns.
8. **He'ra**, or *Juno*, the wife of Jupiter, a beautiful but unamiable goddess.
9. **A-the'na**, or *Minerva* (also *Pallas*), the goddess of wisdom and war.
10. **Hes'tia**, or *Vesta*, the goddess of the hearth.
11. **De-me'ter**, or *Ceres*, the goddess of agriculture.
12. **Aph-ro-di'te**, or *Venus*, the goddess of love and beauty, is generally represented with her son *E'ros*, or Cupid. The legend runs that she rose from the sea-foam and landed on the island of Cyprus. The *Odyssey* represents her as the wife of Vulcan. Venus was of course a favorite subject with the Greek sculptors. The two finest remaining statues of this goddess are the Venus de Medici and the lovely but imperfect statue known as the Venus of Milo.

118. Besides the twelve *dii majores*, or greater gods of Olympus, there was an indefinite number of other divinities. Others, some of whom were little inferior in power and dignity. Such were **He'lios**, or *Sol* (the Sun) ; **Bacchus**, whom the Greeks called *Diony'sos*, to whom the goat-herds and vine-dressers paid especial honor ; the *Muses* ; the *Nere'ides*, or sea-nymphs ; the *Graces*, etc. There were also monsters, — the progeny of the gods, — as the *Harpies*, the *Gorgons*, *Cer'berus*, the *Centaurs*, the *Dragon of the Hesper'ides*, etc.

119. By the Greeks all nature was imaged as moving and working through a number of personal agents ; and

though many of the legends concerning these personages appear to us silly, and some quite shocking, yet the early Greek religion was, to say the least, composed of many beautiful and poetic conceptions. It was not until later that the Greeks adopted from Egypt, Asia Minor, and Thrace the grosser superstitions practiced in their *orgies* and Eleusinian mysteries.

General view
of Greek re-
ligion.

120. The popular worship of the gods consisted principally in sacrifices, which were either offerings of prayer and thanksgiving, or sin-offerings: these were celebrated by the priests either in the open air, on the tops of mountains, in forests and groves, or in temples, especially on the occasion of the celebration of the great national festivals. The offerings were either animals — sometimes single, sometimes in great numbers (hecatombs) — or inanimate objects, as fruits, wine, honey, milk, frankincense, etc. Other modes of honoring the gods were by short forms of prayer uttered standing and with outstretched arms, by votive offerings, solemn processions, and religious dances.

Worship.

121. The Greeks believed that they obtained revelations of the divine will from the oracles, of which the most renowned were those of Zeus at Dodona, and of Apollo at Delphi.

Oracles.

3. GRECIAN FESTIVALS.

122. One of the most striking features of Grecian life were the congresses of the people of all the states and colonies at the four great national festivals, — the Olympic, Pyth'ian, Isth'mian, and Nemean Games. The Olympic Festival was celebrated in honor of Jupiter in the plain of Olympia, in Elis, every four years; the Pythian was held in the third year of each Olympiad, near Delphi, in honor of Apollo; the Isthmian, in honor of

The four fes-
tivals.

Neptune, was so called from its being celebrated on the Isthmus of Corinth ; the Nemean, in honor of Nemean Jupiter, at the town of Ne'mea in the Peloponnesus.

123. The great feature of all these festivals were those "Games," or, as the Greeks called them, "Contests," in which prizes were awarded to the victors in athletic exercises, in foot and horse and chariot races, in music and poetry. The prizes were of no value by themselves, — a mere garland of olive, laurel, etc., placed on the victor's head. But this chaplet carried with it deathless fame. The name of the victor was proclaimed before assembled Hellas, his statue was erected in the sacred grove, and his praises were sung by poets. He returned in triumphal procession to his home, where distinguished honors and substantial rewards awaited him.

124. These festivals lasted for several days, and drew together an immense multitude from all parts of Greece. They thus afforded the best possible means for commercial, social, and literary intercourse. "In the booths around the plain of Olympia, merchants exchanged the rude wares they had brought from the banks of the Tanais and the Rhone against the rich products of Asia and Africa ; the social and political condition of the various states of the mother country, of her farthest colonies, and of the barbarian nations, around them, might be compared. Teachers of philosophy discussed the theories which sprang up in Athens and Italian Greece ; sculptors and painters took occasion to exhibit the finest productions of chisel and brush ; while poets and historians read aloud, in all their freshness, those immortal works which we only half admire for want of such a hearing. Such intercourse must have powerfully tended to maintain that intellectual sympathy which, in the absence of any *political* union, was the strongest bond of nationality among the sons of Hellas." *

Influence, social and literary.

* Philip Smith, History of the World.

4. GREEK LITERATURE AND PHILOSOPHY.

125. Leaving aside the Sacred Scriptures, the literature of Greece is incomparably the most valuable of all the literatures of antiquity. It is far richer, grander, and more original than that of Rome, — and indeed the Latins were avowedly imitators of the Greeks. Of the literature of the Egyptians, Babylonians, and Phœnicians we have only fragments, and the seare far from showing a high tone of thought or sentiment. The ancient Persians have left us but one important work, the Zend-Avesta, and this is rude and primitive in its structure. The great body of Hindoo writings (the Vedas, etc.) is, from its lack of form, curious rather than valuable. With the Greeks, for the first time, came noble intellectual conceptions embodied in forms of literary art.

126. In Greek literature poetry precedes prose. The oldest Greek poems that remain to us are the two immortal epics (i. e. narrative poems) that go by the name of Homer, — namely, the Iliad and the Odyssey. These are considered the finest epics ever written: they breathe the freshness and charm of the poetic springtime of the world. It is a noticeable fact that these earliest monuments of Grecian literature do not belong to continental but to colonial Hellas. It was in the Ionian and Æolian cities on the coast of Asia Minor that the literature of Greece originated; for whether the Iliad and the Odyssey are to be looked on as the work of one individual or of many bards, scholars are agreed that they must be regarded as the composition of Asiatic Greeks.

127. By the Greeks Homer was regarded as a real individual; Herod'otus places him four hundred years before himself, which would fix his period at about 880 B. C. These poems were for centuries lodged only in the memory of bards, who sang or recited

Comparison of
literatures.

Homer.

Homer among
the Greeks.

them to assembled companies and at festivals. They were not committed to writing till the period of Pisistratus at Athens (B. C. 560).

On the subject of the authorship of the Homeric poems, read Chapter XXI. of Grote's *Greece*, Vol. II. The most celebrated English translations of Homer are those of Chapman (time of Shakespeare), Pope and Cowper (last century), Lord Derby and our American poet, William Cullen Bryant.

128. The next development of epic poetry was in Bœotia, in the works of Hesiod, who is thought to have lived in the 8th century, that is, about a century after Homer. The two most famous books of Hesiod are the *Theogony* and the *Works and Days*. These were looked up to by the Greeks as of great authority in theological and philosophical matters; but they do not possess the same interest for us as the Homeric poems.

129. The epic was the only kind of poetry during the kingly period. The epics usually related the exploits of the heroes of the mythical ages, and hence were very acceptable to princes who claimed descent from those heroes. When, however, regal rule gave place to democracy, poets arose who were stimulated to a freer expression of *live* feelings. The new style of poetry is called the *Elegy*, — but the word has a wider meaning than with us, and denoted all *emotional* poetry. One of the most famous writers of the elegy was Tyrtaeus (born in the latter part of the 8th century B. C.). He is said to have been a lame schoolmaster at Athens, sent to Sparta in derision by the Athenians, to whom the Spartans had applied for a leader in the Messenian war: it is added that his stirring songs had a great influence on the campaign. Simonides of Ceos, who belongs to the 5th century, is also named as a writer of noble elegies.

130. The next step in the progress of Greek poetical

literature was the growth of *lyric* poetry. The chief feature of this style was its connection with *music*, vocal as well as instrumental. Lyric poetry. Lyric poems were sung, accompanied with music and often with the movements of the dance. The most famous names in Greek lyric poetry are Sappho, Alcæ'us, Anac'reon, and Pindar. Sappho, who wrote in the 6th century B. C., was a Lesbian; she sang of love, and Alcæus, who also was a Lesbian and her contemporary, calls her the "violet-crowned, pure, sweetly smiling Sappho." Pindar (born 522 B. C.) was a native of Bœotia; he was the most celebrated of the Doric school of lyrists, and was thought by the Greeks the most sublime of their poets.

131. The highest form of Greek literature, the drama, arose in Athens in the age of Pericles, 5th century B. C. Tragedy attained its full develop- Drama. ment at the hands of Æs'chylus (born 525 B. C.), Soph'ocles (born 495 B. C.), and Eurip'ides (born 480 B. C.). The fertility and excellence of Greek dramatic poetry at the flood tide of national greatness were most remarkable. The festivals of Bacchus (Dionysos), celebrated at Athens every spring, were the principal occasions on which new pieces were brought out, and always in competition for the prize and under the direction of the chief magistrates.

132. Greek tragedy as exhibited in the masterpieces of Æschylus, Sophocles, and Euripides was very Comparison with Shakespeare. different from our drama, and especially from the plays of Shakespeare. The Shakespearian tragedy deals with human life and passion; Greek tragedy with the gods and mythical heroes. In regard to treatment, the Greek dramatist was bound to obey the rules of "unity of time and place"; that is, the plot must be confined to *one* place and to an interval of time not much exceeding that which was occupied in the representation. All that could not be supposed to happen in the presence of the chorus, and within

the compass of a few hours, had to be *narrated*, and could not be *acted*. Shakespeare wholly disregarded the limitations of time and space. Had such a subject as *King Lear* been treated by Sophocles, all that precedes the fifth act would have been *narrated*, and the fifth alone *acted*.

133. Athenian comedy derived its origin from the revels and gibes of the *comus*, or Bacchic procession.
Comedy. Its greatest master was Aristophanes (born at Athens 444 B. C.). Among the most famous of his comedies that have come down to us are *The Clouds*, *The Wasps*, *The Birds*, and *The Frogs*. They satirize Athenian society in a very pungent and amusing manner.

134. We now turn to prose literature. In history the first great name is that of Herodotus, called
Herodotus. the "Father of History." He was an Ionian Greek of Halicarnassus in Asia Minor, and was born in 484 B. C., between the first and second Persian wars. The subject chosen by Herodotus was the History of the Persian Wars; but it took a wider scope, and was really a sort of universal history up to his time. He had traveled extensively in Egypt and in Asia, and presents us with a vivid and most interesting picture of society and life among the nations of antiquity at his time. The style of Herodotus is that of a charming story-teller, and his work is still read with pleasure.

Many translations of Herodotus have been made. The best is that of Rawlinson, in four volumes. The notes and essays appended to the text of Herodotus in this admirable work contain the results of the latest scholarship regarding the history of each country treated.

135. The most *philosophic* historian produced by Greece is Thucydides (born at Athens 471 B. C.).
Thucydides. The subject chosen by Thucydides was the Peloponnesian War. His history is distinguished for the

loftiness of its style, and for the profound insight it displays into the actions and motives of men. It is the earliest example of the philosophy of history, and as such it is what Thucydides himself proudly called it, a "possession forever."

136. Among other historians may be named Xenophon, a contemporary of Thucydides, distinguished for his easy and graceful style of narrative ; Polyb'ius, who belongs to the 2d century B. C. ; and Diodo'rus, who belongs to the 1st century. Plutarch, whose *Lives* has been called the "Bible of heroisms," * lived in the 2d century A. D.

137. In connection with prose literature should be mentioned eloquence, or oratory. It was first cultivated as an art at Athens during the great period of the democracy. Pericles himself was master of a style of oratory so sublime as to gain for him the epithet of "the Olympian." Political oratory was exhibited in its fullest development in the contest between Æs'chines (393 – 317 B. C.), the advocate of Macedonian interests, and his greater adversary Demosthenes (385 – 332 B. C.), who, in exposing and opposing the plans of Philip,

"shook the arsenal
And fulminated over Greece."

138. Philosophy was first cultivated in the Grecian colonies of Asia Minor and Lower Italy: in the former by Tha'les, who lived in the 6th century, and was the founder of the Ionic school ; in the latter by Pythag'oras, who belonged to the same century, and was the head of the Pythagore'an school. Thales, Pythagoras, and the other early sages of Greece chiefly occupied themselves with *natural* philosophy ; but in the 5th century they were succeeded by the Sophists and Rhetors, who taught the arts

* R. W. Emerson.

of dialectics and rhetoric, and were the paid instructors of the Athenian youth.

139. Soc'rates, one of the wisest and greatest of the human race, belongs to the epoch immediately succeeding the age of Pericles (469 – 399 B. C.).

Socrates.

He did not teach any positive system of philosophy; his special work was to break down prejudices, to show people their ignorance, to expose fallacies, and to assert the existence of great necessary truths, — of the good, the true, and

SOCRATES.

PLATO.

the beautiful, — and this he did by a method of searching inquiry called, after him, the *Socratic*. He

was ungainly

of person and ascetic in his habits; he taught without pay in the porticoes, the market-place, and the street, addressing all who chose to listen, in a homely but most pointed and telling style. Notwithstanding his pure and noble life, and his efforts to promote the welfare of mankind, his doctrines made him many enemies: he was charged before the Athenian magistrates with not believing in the gods, and with being a corruptor of youth. Being condemned on these charges, he was sentenced to drink a cup of hemlock. He met his death calmly, surrounded by his beloved and weeping disciples, to whom in his last hours he discoursed on the Immortality of the Soul.

140. Plato (429 – 347 B. C.), one of the disciples of Socrates, was the founder of the Academic

Plato.

school, so called from the groves of Acadēmus, near Athens, where the philosopher gave his lectures. The works of Plato remain in the form of his *Dialogues*. In these

Socrates is represented as the principal speaker ; but the philosophy of Plato was really his own. It is distinguished for its lofty ideal character. The Platonic doctrines have had a powerful influence on the human mind, and are the high-water mark of spirituality in the ancient world.

141. Aristot'le (384–322 B. C.), the founder of the Peripatetic school (at the Lyceum at Athens), was the most logical and systematic of the philosophers and scientists of Greece. He first gave form to what is called the *deductive* system of reasoning. His philosophy predominated over the minds of men for two thousand years, — lasting, in fact, until it was displaced by the *Inductive* system, with which the name of Bacon is associated. Induction arrives at truth by reasoning up from facts to general laws ; deduction begins with abstract principles and seeks to arrive at truth by reasoning downwards, as in geometry. Aristotle was the teacher of Alexander the Great.

Aristotle.

5. GRECIAN ART.

142. The four fine arts are architecture, sculpture, painting, and music. The artistic instincts of the Greeks expressed themselves in the first two forms (for painting and music belong properly to the Middle Ages and to Christianity) ; and in these a degree of perfection was attained that was never before seen and that has never since been surpassed.

Forms of
Greek art.

143. The most important architectural works of Greece are the temples of the gods : in these we find the development of the Grecian column in the three classic forms, — the DORIC, the IONIC, and the CORINTHIAN. It is probable that all the principal cities of Greece had temples commensurate with their dignity before the Persian wars ; but many were destroyed during that struggle, and in the grand period of national life that

Temples.

followed the contest with Persia the people pulled down and rebuilt the old structures in a more magnificent style. The consequence is that nearly all the great temples now found in Greece were built in the forty or fifty years which succeeded the defeat of the Persians at Salamis.

THREE ORDERS OF GREEK ARCHITECTURE.

144. The graceful Ionic order of architecture had its origin in the Greek cities of Ionia in Asia Minor. The most celebrated example of this order was the temple of Diana at Ephesus, burnt on the birthnight of Alexander the Great (B. C. 356) by Heros'tratus, and rebuilt in still more splendid style in the Roman age. This temple was 425 feet long by 220 feet wide. Its whole foundation has been laid bare by English explorations.

145. The Corinthian was the highest and most richly ornamented of the Grecian orders. The ancients employed it in temples dedicated to Venus, Flora, and the nymphs of fountains, because the flowers and foliage with which it is adorned seemed well

adapted to the delicacy and elegance of such deities. It dates from the latter part of the 5th century B. C.

146. The most famous of the Doric temples of Greece is the Parthenon, — the “House of the Virgin,” dedicated to Athena (Minerva): it was built of Parthenon. pure white marble, and crowned the Acropolis at Athens. Of this structure a great authority says: “In its own class it is undoubtedly the most beautiful building in the world. It is true it has neither the dimensions nor the wondrous expression of power and eternity inherent in Egyptian temples, nor has it the variety and poetry of the Gothic cathedral; but for intellectual beauty, for perfection of proportion, for beauty of detail, and for the exquisite perception of the highest and most recondite principles of art ever applied to architecture, it stands utterly and entirely alone and unrivaled, — the glory of Greece, and the shame of the rest of the world.” *

147. It is acknowledged that in sculpture the Greeks attained absolute perfection. The finest specimens of Grecian sculpture that remain to us Sculpture. are the figures that adorned the pediments and friezes of the Parthenon. Most of these were taken by Lord Elgin from Athens to England, and are now in the British Museum. Many of the figures are, unfortunately, in a mutilated state, but they nevertheless embody the very perfection of loveliness, majesty, and power. These works were executed by a school of artists under the direction of the illustrious Phid'ias, who belonged to the grand period following the Persian wars. This was the heroic age of Grecian sculpture: later artists produced forms that the uninstructed regard as more *beautiful*, but they lack the perfect purity and repose of these immortal works.

* Ferguson's History of Architecture, Vol. I. p. 221. See cut of the Parthenon, p. 73 of the present book.

6. GREEK LIFE, MANNERS, ETC.

148. The mode of life and the manners and customs of the Greeks, as gleaned from their writings and the relics they have left us, form a deeply interesting subject, — which, however, can merely be touched on here.

Remark.

149. The dress of the Greeks was simple, without unnecessary coverings or useless display of ornaments. Between the sexes there was little difference of attire. The garments were commonly of wool, linen, and later of cotton. The women wore no head-coverings; all the men, too, were hatless, except travelers and certain kinds of workmen. In-doors the Greeks used no foot-covering; abroad they wore sandals, shoes, sometimes boots.

Dress.

150. The Greeks ate three daily meals, reclining on couches, and using neither table-cloth nor napkins. In primitive fashion, they used their fingers for knives and forks; but spoons were common. They washed the hands (no wonder!) before and after meals. Among the common people dried fish and barley bread, with dates, were the staple food. Among the well-to-do all sorts of luxuries were of course indulged in. After dinner came the *symposium*, when host and guests drained goblets of wine mixed with hot or cold water, being governed by the “master of the feast,” who was chosen by lot. This drinking-bout was enlivened by varied conversation, music, dancing, and all sorts of games and amusements.

Meals.

151. Though the state did not support schools, yet daily school-going was quite general; the boys alone went to school, however. The whole education of a Greek youth was divided into three parts, — grammar, music, and gymnastics. The schoolmaster was called the *grammatistes*, or grammarian; but with the Greeks

Education.

"grammar" included most of the rudimentary branches of education, while under the term "music" came all intellectual accomplishments. The gymnasium, where the body was rendered supple and strong by wrestling, running, boxing, and kindred pursuits, was part and parcel of Greek education, and was much frequented both for pastime and exercise. There the contestants trained for the celebrated Olympic Games.

152. Women seem in the Homeric age to have held a higher position in the household than in later times. In the historic period, the husband ^{Position of woman.} treated his wife as a faithful slave, "something better than his dog, a little dearer than his horse." The principle on which the education of women rested was, that just so much mental culture was expedient for women as would enable them to manage the household, provide for the bodily wants of the children, and overlook the female slaves. Secluded in the *gynecæum*, or female apartment, both before and after marriage, they led a secluded and narrow life; so that we must think of Greek society as destitute of the refining and ennobling influence of cultured mothers, sisters, and wives; and this fact resulted in some distinctly traceable defects in the products of Grecian genius. We shall hereafter see that it is to Christianity that we are indebted for the elevation of woman to her true place in society.

A PROCESSION OF SUPPLIANTS

SECTION III.

HISTORY OF ROME.

CHAPTER I.

GEOGRAPHY AND RACES.

I. THE history of the Romans, the last and greatest people of antiquity, is now to engage our attention. We shall see how this people comes first to notice as a village community in the 8th century B. C., — how it develops into a vigorous republic and sub-

ROMA
REPUBLIC • IMPERIAL • PONTIFICAL.

dues all the other races of the peninsula, — how it pushes its conquests beyond the bounds of Italy, — and how, finally, about the time of the birth of Christ, it stands forth a great imperial and world-ruling power. It is a wonderful and most instructive story.

2. Italy is the central one of the three great peninsulas which project from the South of Europe into the Mediterranean Sea. It has an extreme length of 700 miles, is bounded on the north by the chain of the Alps, and is surrounded on other sides by the sea. It may be divided into two parts, — the northern consisting of the great plain drained by the river Padus, or *Po*, with its tributaries, and the southern being a long tongue of land with the Apennines as a backbone traversing it from

Geographical
features.

north to south. It should be noticed, however, that, till the time of the Empire, the Romans never included the plain of the Po in Italy. To this section they gave the name of *Gallia Cisalpi'na*, or Gaul on this (the Roman) side of the Alps. Both

the northern and southern sections of Italy comprised many distinct territorial divisions, the names of which will best be learned from the map.

3. Italy was inhabited, at the earliest period to which our knowledge carries us back, by four principal races, the Gauls, Etruscans, Iapygians, and Italians proper; but the first three are of minor importance compared with the fourth, the Italians proper.

Races.

4. The Gauls inhabited the greater part of Northern Italy (*Gallia Cisalpina*); they were a branch of the same race that inhabited Gaul to the north of the Alps (France), and hence were Aryans. The Etruscans inhabited Etruria, a district between the Arno and the Tiber. Their origin is involved in great obscurity, but it is believed that this people belonged to the Aryan stock. Certain it is that, long before Rome appears as a village on the Tiber, the Etruscans had developed a peculiar civilization: they were great builders, and skilled in

First three
races.

many of the arts ; they delighted in auguries, and had a strange and gloomy religion. In Apulia and the heel of Italy dwelt the Iapygians : this people seems to have been a primitive race, quite distinct from the Italians proper. In addition to these races, we should also notice the Greeks in Italy, for this people had early planted so many colonies on the southern coast that they gave to that district the name of *Magna Græcia*, or Great Greece.

5. The fourth of the races of Italy is the one with which we shall be mainly concerned in Roman history. This is the *Italian* race proper, which occupied almost the whole of Central Italy. It was originally a pure Aryan stock, nearly related to the Hellenic race,—a kinship which is strikingly attested by the agreement of Greek and Latin in many words that relate to agriculture and the *primitive* facts and phases of life.

6. The Italians proper were divided into two branches, the *Latins* and the *Umbro-Sabellians*, the latter including various tribes :—

ITALIANS.	{	Latins,	{	Umbrians,
		Umbro-		Sabines,
		Sabellians.		Samnites, etc.

Now it is with the first branch that we shall be specially concerned in the beginnings of Roman history,—namely, with the Latin branch of the Italian race ; for it was by men of this stock that were laid the foundations of the mighty Roman state.

7. The seat of the Latins was Latium, a small district on the western coast of Central Italy, between the Tiber and the Liris. Its limits are represented in the map on the opposite page.

CHAPTER II.

PRIMEVAL ROME.—PERIOD OF THE KINGS.

8. THE early history of Rome is given in an unbroken narrative by the Roman writers, who detail the marvels of Rome's descent from wide-famed Troy, the landing of Æne'as in Latium, the love of the god Mars for the vestal Rhea, her bearing twins by the god, their exposure in the Tiber, their being saved and suckled by a she-wolf and fed by a woodpecker till found by the shepherd Faus'tulus, their finally restoring their grandfather to the throne of Alba Longa, and then their collecting their fellow-shepherds and founding a town named Rome (from Romulus, the elder of the twins), on the hill where they had been miraculously saved and educated.

Legends of
early Rome.

9. These romantic legends were received by the Romans themselves with unquestioning simplicity ; but they can no longer be regarded as a narrative of real events. The records of the early days of Rome are known to have been destroyed when the city was burned by the Gauls (B. C. 390) ; and Livy, the earliest writer on

Criticism on
these.

Roman affairs whose works have come down to us, wrote about 750 years after the foundation of the city.

IO. At a very early period the Latins in the district of Latium formed a confederacy of thirty cities, at the head of which was the city of Alba Longa. Now it is believed that Rome was founded by a colony that went out from Alba Longa with the view of establishing there an outpost of defense against the Sabines and Etruscans, whose territory adjoined Latium at that point. And, indeed, according to modern scholars, the very name *Roma*, in place of having any relation to the fabled "Romulus," means a *march*, or border.

Real begin-
nings of
Rome.

II. The founding of Rome is placed in the year 753 B. C. And, setting aside the impossible fables of the Roman historians, we may say there is good reason to believe that as early as the middle of the 8th century before the Christian era there stood on a height on the Tiber, called the Palatine Mount, a little village named Roma, the center of a small township, consisting probably of 5000 or 6000 inhabitants, all of them husbandmen or shepherds. A chain of events which history cannot now trace, but which is indicated in a poetic manner by a number of early Roman legends, led to the incorporation of Rome with two neighboring towns, — a small Etruscan settlement on the Cælian Hill, supposed to have been called Lu'cerum, another a Sabine village on the Quirinal Hill, called Quirium. The Sabines were received on a footing of equality, but the Etruscans on a subordinate footing. The settlement thus consisted of three *tribes*, — the *Ramnes*, or Romans, the *Tities*, or Sabines of Quirium, and the *Luceres*, or Etruscans of Lucerum.

Earliest his-
tory.

12. Tradition hands down the names of seven kings who ruled Rome during the regal period (753–509 B. C.); but great obscurity hangs around the greater part of this epoch.

Kings.

13. The Roman citizens were from the earliest times divided into two classes, — Patricians and Plebeians, a distinction of great importance in Roman history. To the Patricians belonged all magisterial offices, all the higher degrees of the priesthood, the ownership of the public lands, and the privilege of using a family name. In fact, during the early ages the Patricians alone constituted the *Populus*, or people, in a political sense; for not only was the senate chosen from their ranks, but the sole popular assembly was the assembly of Patricians, called the *Comitia Curia'ta*. The Plebeians at this time, though freemen and personally independent, were wholly destitute of political importance.

14. During the reign of the fifth king of Rome, Ser'vius Tullius, called the "King of the Commons," an important change was made in the constitution of the Roman state. Servius gave the Plebeians a share in the government by establishing a new national assembly called the *Comitia Centuria'ta*, or Assembly of the Hundreds, in which both Plebeians and Patricians voted alike. It was so arranged that in the new national assembly the old families and the wealthy class should have most voice. However, notwithstanding these restrictions, the new constitution was a great concession to the people, as it virtually admitted every free individual within the Roman territory to a share in the government.

15. An attempt on the part of the seventh and last king, Tarquin'ius Super'bus, to undo these reforms and to establish what the ancients called a tyranny, led to the expulsion of him and his family, and to the abolition of the kingly form of government at Rome, 509 B. C. Ever after this the Romans hated the very name of *king*.

CHAPTER III.

THE ROMAN REPUBLIC.

I. EPOCH OF THE STRUGGLE FOR EXISTENCE (509-390 B. C.).

16. THE history of Rome as a republic covers a period of 482 years, — from the termination of kingly rule, 509 B. C., to the termination of republican rule by the establishment of the empire under Augustus, 27 B. C.

17. This period naturally divides itself into *four Epochs*.
 Its four epochs. I. Epoch of the Struggle for Existence, beginning with the establishment of the republic and ending with the Gaulish invasion of Italy, 509-390 B. C.

II. Epoch of the Roman Conquest of Italy, from the Gaulish invasion to the complete subjugation of the peninsula, after the repulse of Pyrrhus, 390-266 B. C.

III. Epoch of Foreign Conquest, including the Punic and Macedonian wars down to the beginning of civil strife under the Gracchi, 266-133 B. C.

IV. Epoch of Civil Strife, from the Gracchi to the establishment of the Empire under Augustus, 133-27 B. C.

18. When, at the close of the 6th century (509 B. C.), Rome ceased to be under kingly rule, it became a republic. Instead of a king, two magistrates called *Consuls* were elected every year. In other respects the constitution remained as before. The first consuls were Brutus and Collati'nus.

19. Rome had attained a high degree of power under her kings. By a treaty made in the second year of the republic with the Carthaginians (508 B. C.), a treaty which has fortunately been preserved, it

appears that she was mistress of the whole coast from Ostia to Terracina, and traded with Sicily, Sardinia, and Africa.

20. The state of things under the republic was for a long time much less fortunate. The Romans Wars of the republic. became engaged in contests with their neighbors, and soon after the change of government they lost a considerable part of their dominion. There were : 1. Wars with the Etruscans ; 2. Wars with the Sabines, Volscians, and Æquians ; 3. Wars with the Æquians and Volscians ; 4. Wars with the Æquians and Veientes ; till finally, after over a century of strife, Rome was overwhelmed by the Gauls, 390 B. C. It is needless to enter into any account of these contests, and the more so, that almost the whole history of this epoch is of a legendary character.

21. Leaving aside the details, however, we can readily see that this century or more of desperate Character of the period. struggle for existence was in many respects a great era, and behind the veil of legend we plainly descry grand human figures, — the figures of those stern old patriots who gave to the name *Roman* its lofty significance. The old Roman character was indeed a *hard* character, — it was stern, unfeeling, in many respects cruel ; for we must remember that Christianity had not yet come to humanize men by the consciousness of universal brotherhood. But at the same time it had some noble virtues ; it was of heroic mold, and, for the work then required, was doubtless just what was needed. Below will be found brief sketches of a few of the great men of the first epoch.

GREAT NAMES OF EARLY ROME.

Brutus (Lucius Junius), known as the "Elder Brutus," was one of the first two consuls. During his term of office the Roman state was threatened both from without and within. The exiled king, Tarquin, had retired to Etruria, where he began to intrigue for a return to Rome. In this he was aided by a conspiracy of a number of the

young nobility, and among the conspirators were found the two sons of Brutus himself. The plot being discovered, the consul would not pardon his guilty children, and ordered the lictors* to put them to death with the other traitors,—a memorable example of inflexible justice. Soon after, the Etruscans espoused the cause of Tarquin and marched against Rome. When Aruns, a son of Tarquin, saw Brutus at the head of the Roman cavalry, he spurred his horse to the charge, and both fell from their horses mortally wounded.

Horatius (Cocles) is celebrated for his heroic “defense of the bridge.” The circumstances are these. Porsena, lars or lord of Clusium in Etruria, had taken up the cause of the exiled Tarquin, and in 508 B. C. advanced with a large army to the Mount Janiculum, just across the Tiber from Rome. That city was now in the greatest danger, and the Etruscans could have entered it by the Sublician bridge, had not Horatius Cocles, with two comrades, kept the whole Etruscan army at bay while the Romans broke down the bridge behind him. When it was giving way he sent back his two companions, and withstood alone the attacks of the foes till the cracking of the falling timbers told him that the bridge was destroyed. Then praying, “O Father Tiber, take me into thy charge and bear me up!” he plunged into the stream and swam across in safety amid the arrows of the enemy. The state raised a statue in his honor, and allowed him as much land as he could plow round in one day. Few legends are more celebrated in Roman history than this gallant deed of Horatius, and Roman writers loved to tell

“How well Horatius kept the bridge
In the brave days of old.”

Coriolanus (488 B. C.). Caius Marcius, surnamed Coriolanus, from his valor at the capture of the Latin town of Corioli, was a brave but haughty Patrician. He was hated by the Plebeians, who refused him the consulship. This inflamed him with anger, and accordingly when the city was suffering from famine, and a present of corn came from Sicily, Coriolanus advised the senate not to distribute it among the Plebeians, unless they gave up their tribunes. Such insolence enraged the Plebeians, who would have torn him to pieces on the spot had not the tribunes summoned him before the Comitia of the Tribes. Coriolanus himself breathed nothing but defiance; and his kinsmen and friends interceded for him in vain. He was condemned to exile. Accordingly he went over to the Volscians, the enemies of his country.

* The *Lictors* were public officers who attended upon the Roman magistrate. Each consul had twelve lictors. They carried upon their shoulders *fascies*, which were rods bound in the form of a bundle, and containing an ax in the middle.

men and offered to head them against Rome. The king of the Volscians persuaded his people to appoint Coriolanus their general. Nothing could check his victorious progress: town after town fell before him; and he advanced within five miles of the city, ravaging the lands of the Plebeians, but sparing those of the Patricians. The city was filled with despair. The ten head men in the senate were sent in hopes of moving his compassion; but they were received with the utmost sternness, and told the city must submit to his absolute will. Next day the pontiffs, augurs, flamens, and all the priests came in their robes of office and in vain prayed him to spare the city. All seemed lost, but Rome was saved by her women. Next morning the noblest matrons, headed by Veturia, the aged mother of Coriolanus, and by his wife Volumnia, holding her little children by the hand, came to his tent. Their lamentations turned him from his purpose. "Mother," he said, bursting into tears, "thou hast saved Rome, but lost thy son!" He then led the Volscians home. Some say that he was put to death by the Volscians; but others, that he lived among them to a great age, and was often heard to say that "none but an old man can feel how wretched it is to live in a foreign land." *

Cincinnatus (**Lucius Quintius**, 458 B. C.) was one of the heroes of old Roman story, with whose name is connected a well-known spirit-stirring legend. He was a noble, but had retired from popular tumult to his farm. On one occasion the Æquians, who were bitter foes of the Romans, had surrounded a Roman camp on the Alban hills. In this emergency it became necessary to appoint a dictator,† and the senate chose Cincinnatus. The delegates who were sent to announce this to him, found the noble Roman engaged in plowing his own fields, clad only in his tunic, or shirt. They bade him clothe himself that he might hear the commands of the senate. He put on his toga, which his wife brought him. They then told him of the peril of the Roman army, and that he had been made dictator. Next morning before day-break he appeared in the Forum and levied a new army; he then marched against the enemy, and succeeded in hemming in the Æquians, who were blockading the Romans. He forced them to surrender, and made them pass under the yoke.‡ Cincinnatus entered Rome

* See Shakespeare's drama of *Coriolanus*.

† The *Dictator* was an extraordinary magistrate appointed in seasons of great peril. He possessed absolute power for six months, unless he sooner gave it up; and from the time of the appointment of the dictator all the other magistrates, even the consuls, ceased to exercise any power. The first dictator was Titus Lartius, appointed in the year 498 B. C.

‡ *Sub jugum* (*jugum*, a yoke), the origin of our word *subjugate*. The yoke was formed by two spears fixed upright in the ground, while a third was fastened across them.

in triumph only twenty-four hours after he had quitted it, and voluntarily laid down his dictatorial power after holding it but fourteen days, and returned to his farm.

22. In addition to troubles from without, the young republic had to meet internal difficulties ; for a quarter of a century had not passed since the expulsion of the kings, before a struggle of classes arose, — a struggle between the Patricians and the Plebeians, the first of a long series of social contests that constitute the most important portion of the annals of the early commonwealth.

23. It appears that the Patricians had found an ingenious way of crippling the Plebeians by means of the operation of the Roman law of debt. In primitive Rome, as in other ancient states, an insolvent debtor was liable to be seized by his creditor, and kept in chains or made to work as his slave. Now such had been the distress caused by the wars ever since the establishment of the republic, that multitudes of the Plebeians had been obliged to become debtors to the Patricians, who were the exclusive proprietors of the state lands. Hundreds had in consequence fallen into a condition of slavery ; so that the Plebs were thoroughly disheartened, and the Patricians practically possessed all power.

24. When this state of things became unbearable, the Plebeians resolved upon quitting Rome and building beyond the Roman territory a new town on the *Mons Sacer* (Sacred Mountain), about four miles from the city, 493 B. C. Thither accordingly they seceded ; but after considerable negotiation a compromise was made : debtors were relieved and slaves for debt were set free.

25. At the same time a still more important change was made, — two magistrates, chosen from the Plebeians, and called *Tribunes of the Plebs*, were appointed. These afterwards became ten in number. They held office for a year, during which time

Social troubles.

Oppression of the Plebs.

Secession.

Office of tribune.

their persons were sacred, and they could nullify any decree of the senate that they thought injurious to the Commons by the word *VETO*, *I forbid it*. No one could have foreseen how important this office would become.

26. The Plebeians had gained an important step in the appointment of the tribunes. But there were Laws of the Twelve Tables. still many grievances under which they suffered. And one of the most oppressive was that no regular code of laws existed. After many stormy debates it was at last decided (450 B. C.) that a Council of Ten, called from their number *Decemvirs*, should be appointed to make a code of laws, and it was agreed that in the mean time all the officers of the government (consuls, tribunes, etc.,) should give up their places, and let the decemvirs control the state. The decemvirs appointed for the first year did their work well: they embodied the laws of Rome in written form, in the famous code of the Twelve Tables.

27. On the expiration of their year's office, all parties were so well pleased that it was resolved to Conduct of the decemvirs. continue the same form of government for another year. But the new decemvirate acted very tyrannically, and when their time came to an end they continued to hold their power in defiance of the senate and of the people. Matters soon fell into so bad a state that the Plebeians seceded once more, retiring to the Sacred Mount.

28. This second secession extorted from the Patricians the second great charter of Plebeian rights. It What was gained. was agreed that the tribunes should be restored, and that the authority of the assembly of the tribes (*Comitia Tributa*) should be put on a level with that of the Centuries. Two consuls were elected in place of the decemvirs, 446 B. C.

29. The Plebeians were, however, still justly dissatisfied; the choice of the chief executive, namely, the Dispute about consuls. consuls, was made exclusively from the Patri-

cians. The Commons now began to claim a share in the consulate. This demand was resisted by the Patricians with their whole strength; and when at last the Plebeians prevented the raising of levies for military service, the Patricians declared that they would rather have no more consuls than agree to the admission of the Plebeians to the office.

30. At length the Patricians proposed (444 B. C.) that a certain number (first three, afterwards six) of *More changes.* *Military Tribunes*, who might be chosen equally from Patricians and Plebeians, should exercise supreme power. In the following year two new magistrates called *Censors* were appointed; and as these were chosen exclusively from among the Patricians, it gave that order considerable additional weight, especially as the censors held the power of determining the rank of every citizen, of fixing his status in society, and valuing his taxable property. Moreover, though in *theory* the military tribunes could be elected from either order, yet in *fact*, such was the ascendancy of the Patricians that usually only men of their own class were chosen; and it was not till 400 B. C., or about forty years after the remodeling of the government, that Plebeians were freely elected.

31. It was at this time that the progress of Rome received a great check by an invasion of the Gaulish inva- sion. Gauls, who, under the leadership of Brennus, pressed southward, overran Etruria, and having defeated the Romans on the Allia, captured the city, and burnt almost the whole of it, except the Capitol, 390 B. C. The Capitol held out for seven months, until the Gauls, tired of the siege, agreed to go on receipt of a thousand pounds of gold. It is recorded that Brennus increased the stipulated amount by the weight of his sword, which he cast into the scale. Many stories told by the Roman historians, respecting the Gaulish capture of Rome, are plainly fictions; but of the fact itself there can be no doubt.

2. EPOCH OF THE ROMAN CONQUEST OF ITALY (390 - 266 B. C.).

32. Scarcely had Rome been rebuilt with narrow and crooked streets and small dwelling-houses, when the Patricians again asserted the whole of their claims, and in particular revived the ancient laws of debtor and creditor in all their severity. The Gallic invasions left the Plebeians in a state of great poverty and distress, and now the severe measures of the Patricians threatened to reduce the whole common people to a state of practical slavery. The contest came to a crisis in 376 B. C.

33. At this time two bold and able tribunes of the people, Licinius Stolo and Lucius Sextius, came forward with a plan to settle all the difficulties. They said there were two evils to be remedied: 1. Political inequality; 2. Material want. The new plan met the first evil by restoring the consuls as the chief magistrates, and appointing that one of the two consuls annually chosen should always be a Plebeian. The second evil, namely, the poverty of the Plebeians, the new plan proposed to mitigate by providing, first, that the interest already paid on debts should be deducted from the capital, and the residue paid in three years; secondly, that of the public lands, hitherto practically monopolized by the rich, no man should hold more than 500 *jugera*,* while the remainder should be distributed in small portions among the Plebeians as their own property.

34. This new plan of a constitution, known as the *Licinian Rogations*, was resisted to the utmost by the Patricians; but all their efforts proved unavailing against the firmness of the tribunes, who prevented the election of officers and military levies. The plan became a law in 367 B. C., and the following year a

Plebeian oppression.

Proposals for reform.

Victory of the Plebs.

* A *jugerum* was rather more than half an acre.

Plebeian consul, Lucius Sextius, was elected. All the other offices, dictatorship, censorship, prætorship, etc., were soon thrown open to the Commons,—so that at last, after the long struggle, perfect political equality was established.

35. For a century and a half since the expulsion of the kings, Rome had been a republic, but an aristocratic republic: it was now truly a government of the people. From this time begins the golden age of Roman politics. Civil concord, to which a temple was dedicated, brought with it a period of civic virtue and heroic greatness.

36. Up to the period at which we have now arrived,—the middle of the 4th century B. C.,—the Romans were but a small nation: their territory included but a few townships on the Tiber, and the whole number of adult Roman citizens at the close of the 5th century was under 300,000. In the mean time Rome was surrounded by petty nationalities that girdled its strength; and its wars thus far had been mainly a “struggle for existence.”

37. With the settlement of political difficulties in the middle of the 4th century, we enter on a new era of Roman history. The republic now began a series of *wars for dominion*. These wars were with (1) their immediate relatives the *Latins*; with (2) their more distant relatives, the various other *Italian* nationalities; with (3) the *Greek settlements* in Southern Italy aided by Pyrrhus, King of Epirus; with (4) the *Gauls* in Northern Italy.

38. History has been too much occupied with the record of battles and sieges; hence we shall not go into the endless and complicated details of these operations. But we must understand in a general way that these Roman wars meant a great deal. Before Rome could play its grand part in the history of the world’s civili-

zation it was necessary, first of all, that it should become a great *Nation*. A great nation needs an extensive stage on which to play its part. Now the wars by which the Romans put down the various small and obstructive nationalities of Italy were the clearing of the stage, preliminary to the oncoming of that imperial figure, the Mistress of the World.

39. The series of wars against Etruscans, Latins, Samnites, and Gauls, sometimes singly and sometimes in combination, is usually known in Samnite wars. Roman history by the general designation of the "Latin wars" and the "Samnite wars." These wars filled the greater part of the half-century between 343 and 290 B. C.; and the Samnites were the leaders in this onset of the nations on Rome, the issue of which was to determine whether Rome or Samnium should govern Italy. The Romans were completely successful; and extricating themselves by their valor from this confused conflict of nations, the Romans found themselves masters of Central Italy (290 B. C.), — Samnites, Latins, etc., all their subjects.

40. The "Samnite wars" were succeeded by a short but brisk war, designated in Roman history War with Pyrrhus. "the war with Pyrrhus and the Greeks in Italy." Pyrrhus was an able and enterprising Greek prince whom the Greek towns of Southern Italy — fearful of being overwhelmed by what they called the "conquering barbarians of the Tiber" — had invited over from his native country to help them as champion of a Greek city.

41. Pyrrhus came over with a force of 25,000 troops and 20 elephants. In the first battle (Pandusia, 280 B. C.) the Romans fought stoutly, Narrative. until what they conceived to be gigantic gray *oxen* (the elephants) came thundering down upon them; so that the victory remained with Pyrrhus. In the next contest also (Asculum, 279 B. C.) Pyrrhus was successful; but

the Romans made him pay so dearly for his triumph that he is said to have exclaimed, "Another such victory and I am undone!" Not having succeeded in his main object, Pyrrhus quitted Italy and went to Sicily; but soon after he returned, renewed the contest with the Romans, and was utterly overthrown at Beneventum, in 275 B. C.

42. The subjugation of Southern Italy — of all that part called *Great Greece* — soon followed, and at the close of the year B. C. 266 Rome reigned supreme over the length and breadth of the peninsula of Italy, from the southern boundary of Cisalpine Gaul to the Sicilian Straits, and from the Tyrrhenian, or Tuscan, Sea to the Adriatic.

43. We must now see how Rome *consolidated* the power she had thus won, and try to realize what manner of *nation* the Roman state now formed. The real governing power was the Roman people, — *populus Romanus*, — that is to say, the body of free inhabitants of the thirty-three tribes or parishes north and south of the Tiber, which constituted the Roman territory proper, together with a considerable number of persons in other parts of Italy who, either from being colonists of Roman descent or from having had Roman citizenship conferred on them, had the privilege of going to Rome and voting at the Comitia, or Assembly. The possessors of the suffrage thus formed a comparatively small body of men, such as might be assembled with ease in any public square or park, and these by their votes decided on the affairs of the commonwealth, controlling thus the destinies of the whole population of Italy, estimated at this time at above 5,000,000.

44. In addition to the *populus Romanus* there were two other classes, — the *Italians* and the *Latins*. The *Italians*, or *socii*, were the inhabitants of the allied and dependent Italian states that had submitted

to Rome. These communities were almost all permitted to retain their own laws, judges, municipal arrangements, etc. ; but they did not possess the Roman franchise, and hence had no share in the political affairs of the republic. The *Latins* were those who belonged to cities having the "Latin franchise," as it was called, from its having first been given to the cities of Latium when conquered. This did not give full Roman citizenship, but made it easier to obtain it.

45. Rome wisely left self-government to all the dependent and allied states, while she secured her sovereignty by three rights which she reserved Summary of government. to herself: 1. She alone made peace or declared war ; 2. She alone might receive embassies ; 3. She alone might coin money. Altogether it was an admirable system, vastly superior to the loosely related Grecian states. It was a system that made possible for the first time in the world's history a great, as well as a free, nation.

46. Thus far we have been occupied wholly with the external wars and the internal struggles of the Romans, and this for the reason that their conquests and their political organization were the main things that this remarkable people had yet accomplished. General summary. It is a striking fact that there was not yet even a dawning Roman literature ; in art, science, philosophy, Rome had done — absolutely nothing. But, in fact, it was in the art of governing mankind that Roman genius was to appear ; and it was *this* that showed itself in these early years, — it was their valor, their probity, their patriotism, their political tact, and not speculation or literary culture, that distinguished them.

3. EPOCH OF FOREIGN CONQUEST (266 - 133 B. C.).

47. The epoch of Roman history on which we now enter covers 133 years, beginning in 266 B. C. and ending in 133 B. C. This is the era of Rome's Extent of the period.

first great foreign conquests, embracing the Punic and Macedonian wars, and lasts down to the rise of the civil broils under the Gracchi.

48. In the middle of the 3d century B. C. the great maritime power of the Western Mediterranean was Carthage. She was at the head of the other Phœnician cities in Africa, numbering about 300, with possessions in Sicily, Sardinia, Corsica, and Spain. In government she was a republic ruled by an aristocracy. The Carthaginians were devoted to commerce, and had the good and the bad traits characteristic of a purely commercial people. The Romans, who were their rivals and enemies, represented them as wanting in integrity and honor; hence the ironical phrase to denote treachery, *Punica fides* (*Punica* from *Pœni*, the Latin form of the name *Phœnicians*), or Punic faith.

49. It was hardly possible that two such powers as Car-

thage and Rome should not come into collision. And it was the more likely, as the island of Sicily lay between them, where the Carthaginians had large possessions, and where the Greek cities were closely connected with the Greek subjects of Rome in Southern Italy.

50. The pretext was not long wanting. The Mamertines, a body of Campanian mercenaries who had seized the town of Messa'na on the Sicilian Straits, being threatened with destruction by the combined Carthaginians and Syracusans, applied for help to Rome, and were readily received into her alliance. From this resulted the *first Punic War*, which lasted for twenty-three years (264–241 B. C.). The independent Greek city of Syracuse having very soon changed sides, the war was between the Romans and Syracusans on one side and the Carthaginians on the other.

51. The war was carried on chiefly in and about Sicily. The reduction of Agrigentum (262 B. C.) was the first great exploit of the Romans. But the most remarkable feature of the contest was the wonderfully rapid development of a navy by the Romans. At the beginning they had no fleet at all, and it is said that they took as their model a stranded Carthaginian galley: two years afterwards they were able to assemble so powerful a navy that they defeated their enemy in a great sea-fight at Mylæ, 260 B. C.

52. Their victories by sea emboldened the Romans to send an army across to Africa, and to attack their enemy in his own country. But the Roman army under Reg'ulus was defeated at Tunis, and Regulus himself was made prisoner (255 B. C.). The war was then confined to Sicily, where the Carthaginians suffered severe defeat at Panor'mus. In the mean time disasters at sea befell the Romans, who lost fleet after fleet, until a new

navy raised by subscription took the sea, and by the victory at Ægu'sa reduced the Carthaginians to seek peace, B. C. 241. The treaty compelled the Carthaginians to evacuate Sicily and the adjacent islands, to pay a heavy indemnity, and to recognize the independence of Hi'ero, king of Syracuse.

53. The island of Sicily, or that part of it which the Carthaginians had possessed, was organized into a *province*, and this fact is notable as being the commencement of that new feature in the Roman rule, namely, the institution of *provincial government*, or that government established by the Romans for their possessions outside of Italy.

54. Having thus triumphed over Carthage, the Romans turned their eyes northward with the view of carrying their dominion to the Alps. The Gauls in the valley of the Po (Cisalpine Gaul) took the alarm, and began a movement towards Rome. They were, however, met by three armies, and were so thoroughly punished that in three years all Cisalpine Gaul submitted to Rome, 222 B. C. In the country were planted two Roman colonies.

55. The Carthaginians felt that they had been deeply wronged by the Romans, and ever since the close of the war they had been studying how the injury done them might be revenged. Among the advocates of war at Carthage was the powerful Barcine family, at the head of which was Hamil'car Barca, who had won fame in the latter part of the previous war. Under this able leader the Carthaginians first directed their attention to Spain (where they already had a strong foothold) as a fit "base of operations" against the Romans. Hamilcar's great object in subjugating Spain was to obtain the means of attacking the hated rival of his country. His implacable animosity against Rome is shown by the well-known tale,

that when he crossed over to Spain in 235 B. C., taking with him his son Hannibal, then only nine years old, he made him swear at the altar eternal hostility to Rome. Hamilcar fell in battle, and was succeeded by his son-in-law Has'drubal, and when the latter was assassinated, the command of the army devolved upon Hannibal.

56. When, at the age of twenty-six, Hannibal was appointed to the command of the Carthaginian army in Spain, he carried the Carthaginian Hannibal's campaign. line up to the Ebro and besieged Saguntum, an ally of Rome. The city fell, and Rome immediately declared hostilities. The result was the second Punic War, which began in the year 218 B. C. Before the Roman army was ready to take the field, Hannibal, who was one of the greatest military geniuses that ever lived, had crossed the Pyrenees on his way to Italy. He then proceeded to perform one of the most famous exploits on record: with his army he climbed over the Alps (218 B. C.), losing above 30,000 men, burst into the plain of Italy, and defeated the Romans in four battles, the greatest of which was Cannæ, fought in 216 B. C.

57. In Italy the career of Hannibal was most extraordinary: for fifteen years (217-202 B. C.) he Operations in Italy. maintained himself in the peninsula, moving hither and thither, keeping seven or eight Roman generals, and among them the wary Fa'bius and the bold Marcellus, continually employed, scattering the Romans like chaff wherever he appeared, exhausting the finances of the state, and detaching the Italian nationalities from their allegiance.

58. It is probable that Hannibal might have maintained himself in Italy for an indefinite time, and Roman strategy. finally have shattered the commonwealth in pieces, had it not been that the Romans assumed the offensive against Carthage. A vigorous young soldier, Pub'lius Scipio, was sent into Spain, which he reduced to the condition of a Roman province, thus closing the main

avenue by which the Carthaginians could send reinforcements to Hannibal (216–205 B. C.). Hannibal's brother, Hasdrubal, managed, indeed, to march from Spain across the Alps into Italy (207 B. C.); but his force was met and defeated, — and the first intimation Hannibal received of his brother's arrival in Italy was the sight of that brother's bloody head tossed contemptuously into his camp.

59. In spite of the cutting of his communications, Hannibal could readily have maintained himself in Italy; but now Scipio passed over into Africa, and having defeated the Carthaginians in several battles, so terrified the authorities at Carthage that they recalled Hannibal from Italy. The final battle of the war was fought on the plain of Zama in Africa, in the year 202 B. C. The victory was with the Romans, and the Carthaginians in consequence were obliged to agree to a peace on very severe terms. Scipio — henceforward known as Scipio *Africanus* — returned home and was honored with the most magnificent triumph that had yet been exhibited in the Roman capital.

60. Several years after this time Hannibal had to flee from his country, and he spent the last years of his life in Syria and Bithyn'ia. By a strange coincidence of fortune, his victor, Scipio, had also to go into exile, and resided for a while at Ephesus, where Hannibal was at the time. Many friendly conversations passed between them, and in one of these the Roman is said to have asked the Carthaginian "whom he thought the greatest general." Hannibal immediately replied, "Alexander; because that, with a small body of men, he had defeated very numerous armies, and had overrun a great part of the world." "And who do you think deserves the next place?" continued the Roman. "Pyrrhus," replied the other; "he first taught the method of forming a camp to the best advantage." "And whom do you place next to

those?" said Scipio. "Myself," said Hannibal; at which Scipio asked, with a smile, "Where, then, would you have placed yourself if you had conquered me?" "Above Alexander," replied the Carthaginian, "above Pyrrhus, and above all other generals."

61. An interval of fifty years separates the second from the third and last war with Carthage, and several important events that we shall have to re-
Third Punic War.

62. The third Punic war was, on the part of Rome, utterly causeless. The second had made Carthage a dependent ally of Rome, but still
Blame of the war.
 left it free in its internal government. Now, a considerable party at Rome were bent on reducing Carthage to a position of complete subjugation. At the head of this party was Porcius Cato, the censor, who then swayed the decisions of the Roman senate. So bitterly hostile was he to Carthage, that for years he closed every speech he made — no matter on what subject — with the words, *Delen'da est Carthago*, "Carthage must be destroyed!"

63. The humbled Carthaginians made every submission, yielding up their arms, their ships, and their
Roman harshness.
 munitions of war, and they even offered to give up their own government and become subjects of Rome. When, however, Rome proposed to raze their seaside city, and send them to live inland, a wail of indignation and despair went up from Carthage, and the inhabitants determined to sacrifice their lives rather than submit to the savage mandate.

64. The third Punic War began in 149 B. C. The "Siege of Carthage" which lasted four years, and was conducted on the part of the Romans
Siege of Carthage.
 by the younger Scipio, known as Scipio Æmilia'nus, was the

one event of this final struggle. Carthage was without ships, without allies, almost without arms; yet she maintained the contest with the courage of despair: the women gave their tresses to make bowstrings, and the men poured out their blood most lavishly. But it was all in vain. The city was taken, and, being set on fire, the flames continued to rage for seventeen days. Thus was Carthage with its walls and buildings, the habitations of 700,000 people, razed to its foundations. The Carthaginian territory was then made into the Roman *Province of Africa*, under a proconsul, and the seat of government was fixed at Utica (B. C. 146).

65. It is related that when Scipio beheld Carthage in flames his soul was softened by reflections on the instability of fortune, and he could not help anticipating a time when Rome herself should experience the same calamities as those which had befallen her unfortunate competitor. He vented his feelings by quoting from Homer the lines in which Hector predicts the fall of Troy:—

“Yet come it will, the day decreed by fates;
 (How my heart trembles, while my tongue relates!)
 The day when thou, imperial Troy, must bend,
 And see thy warriors fall, thy glories end.”

66. Meantime the Roman dominion had been enlarged by the annexation of Macedonia and Greece. While the late war was going on, the ruler of Macedon, King Philip V., became embroiled with Rome, owing to his having made a treaty with Hannibal. The Romans made a campaign against Philip, and in this contest some of the Greek states sided with Macedon and some with Rome. The result was that in the battle of Cynoscephalæ, in Thessaly, 197 B. C., the power of Macedon was broken and Philip had to become a dependent ally of Rome. A little later the Macedonians were completely crushed at Pydna (168 B. C.), and came still more under the power of

Subjugation
 of Macedon
 and Greece.

Rome. In the year 146 B. C. (same year as the destruction of Carthage) Corinth was captured and burned. No further resistance was offered to the victorious Romans, and Greece was made into a Roman province under the name of ACHAIA.

67. At the commencement of the period of conquest (266—133 B. C.), the Roman dominion was confined to the peninsula of Italy; at its close it extended over the whole of Southern Europe from the shores of the Atlantic to the straits of Constantinople, over the chief Mediterranean islands, and over a portion of North Africa, while farther east, in Egypt, Asia Minor, and Syria, her influence was paramount. At the commencement of the period Rome was merely *one* of the "Great Powers" of the world as it then was, — that is, she ranked with Carthage, Macedonia, and the kingdom of the Seleucidæ; at its close she was clearly *the* sole Great Power left.

68. The Roman dominion now became a duality, — it was "ITALY AND THE PROVINCES." The political state of *Italy* was that described in the last section; but the addition of the conquered countries resulted in the new feature of Roman rule called *Provincial government*. Retaining their native habits, religion, laws, etc., the inhabitants of every province were governed by a military president, sent from Rome, with a staff of officials. The provincials were required to pay taxes in money and kind; and these taxes were farmed out by the censors to Roman citizens, who, under the name of *Publicans*, settled in the various districts of the provinces. Thus, like a network proceeding from a center, the political system of the Romans pervaded the mass of millions of human beings inhabiting the shores of the Mediterranean; and a vast population of various races and languages were all bound together by the cohesive power of Roman rule.

69. The luster of the Roman power and the glory of the

quests.

Rule of the
provinces.

Roman name were now at their height. The eyes of all the world were now on Italy, the young republic of the West. Into Rome all talents, all riches, flowed. What a grand thing in those days to be a Roman citizen ; so that, wherever one walked, — in Spain, in Africa, even in once proud Athens, — he was followed, feasted, flattered ! What a career was opened to those who wished for wealth or aspired to fame ! But in the very sunburst of Rome's glory, the germs of decay were ripening.

70. On the Romans themselves the effect of their foreign conquests was both good and bad ; but perhaps the evil outweighed the good. Let us glance at both sides of the shield.

71. The wealth poured into Rome by the conquest of Carthage, of Greece, and the East, and the considerable revenue derived from the permanent taxation of the provinces, enabled the Romans to carry out a great system of public works. Throughout Italy splendid military roads which remain to this day were built, the provinces were traversed by imperial highways, and fine stone bridges were thrown across the Tiber. In Rome splendid public buildings were erected, the city was sewered, the streets were paved (174 B. C.), two new aqueducts (the Marcian, built in 144 B. C., at a cost of \$ 10,000,000) were constructed ; and it may be noted that the Consul P. Scipio Nasica, in 159 B. C., set up in Rome a public *clep'sydra*, or water-clock, the citizens having for six centuries gone on without any accurate means of knowing the time by night as well as day.

72. The effect on Rome of the conquest of Greece and the Hellenized East was very marked. Greek rhetoricians, scholars, tragedians, flute-players, and philosophers in large numbers took up their abode in Rome. The city swarmed with Greek schoolmasters. Greek tutors and philosophers, who, even if they were not

slaves, were as a rule accounted as servants, were now permanent inmates in the palaces of Rome ; people speculated in them, and there is a statement that the sum of 200,000 sesterces (\$ 10,000) was paid for a Greek literary slave of the first class.

73. The stimulus of Greek literary culture led to native production, and in the 2d century B. C. we have the beginning of that Latin literature ^{First literature.} which we still read. Though the great period of Roman letters did not come till a century after this time (age of Augustus), yet there arose a number of writers of no ordinary power. Among these should be mentioned Ennius, the father of Roman poetry ; Plautus, his contemporary, a man of rich poetic genius ; the elder Cato, the first prose writer of note ; and Terence, the most famous of the comic poets.

74. While the Romans were in some respects benefited by contact with the superior though decaying culture of Greece, they also learned a great ^{Evil effects.} deal that was debasing. They became effeminate, luxurious, and corrupt in morals ; marriage was not respected ; the old Roman faith waned, and it was said that two augurs could not meet in the street without laughing in each other's face.

75. The political system of Rome now began to lead to a dreadful state of public corruption. The ^{Political corruption.} Roman government was devised for the rule of a city : all power was in the hands of the civic voters, and when there came to be great prizes, in the way of great offices at home and abroad, the voters began to find that their votes were worth something, and unblushing bribery and corruption became common.

76. The demands of the large planters and merchants led to a great extension of the slave-trade. ^{Growth of slavery.} All lands and all nations were laid under con-

tribution for slaves, but the places where they were chiefly captured were Syria and the interior of Asia Minor. It is probable that at the period at which we have now arrived (middle of the 2d century B. C.) there were twelve million slaves against five million free inhabitants in the Italian peninsula, — a most lamentable state of things !

77. In addition to the slaves, Italy became filled up with a motley parasitic population from Asia and Africa and all the conquered lands, — and the result of this intermixture soon appeared in a marked degeneracy in the Roman *race* itself.

78. The decay of old Roman virtue became at the same time apparent in a great increase of luxury. This displayed itself in houses, villas, pleasure-gardens, fish-ponds, dress, food, and drink. Extravagant prices — as much as 100,000 sesterces (\$ 5000) — were paid for an exquisite cook. Costly foreign delicacies and wines were affected, and the Romans in their banquets vied with one another in displaying their hosts of slaves ministering to luxury, their bands of musicians, their dancing-girls, their purple hangings, their carpets glittering with gold or pictorially embroidered, and their rich silver plate.

79. In the midst of the system there were not wanting some noble patterns of the old Roman type, among whom should be named Cato,* who kept up a constant protest all his life against the growing luxury of his countrymen, and died declaring that they were a degenerate race. Such men were, however, rare exceptions ; and we shall hereafter see that the evil system already operative in the 2d century went on increasing, till finally, a century afterwards, it resulted in the total subversion of the republic.

* Porcius Cato, frequently surnamed Cato the Censor, was born B. C. 234. He distinguished himself in the Punic wars and in various public services, but he was still more noted for his pure morality and strict virtue. He died in 149 B. C., at the age of eighty-five.

4. EPOCH OF CIVIL STRIFE (133-27 B. C.).

80. The picture just given of the state of Roman society in the last half of the 2d century B. C. prepares us for the period of civil strife on which we now enter. A number of causes had resulted in the growth of an aristocracy founded purely on wealth; the old division of society into patricians and plebeians had ceased, and there arose a still worse division into classes, — the rich and the poor. The old peasant proprietors of Italy had become practically extinct, and their place was supplied by hordes of slaves. The cities, and especially Rome, were filled by vast masses of people, not living, as the traders, artisans, and laborers of our cities do, by honest industry, but subsisting in noisy idleness upon the price of their votes. Roman society, in fact, had ceased to have any middle class, and was divided between two extremes, — grandees and paupers. Bad state of society.

81. The cause of the poor against the rich was taken up by a noble young tribune of the people named Tiberius Gracchus. Tiberius and his afterwards distinguished younger brother Caius (the two being known in history as the Gracchi) were sons of a noble Roman matron, Cornelia, daughter of the great Scipio Africanus. Gracchus.

82. Tiberius Gracchus proposed a land-law (agrarian law), which was practically a revival of the *Licinian law*: it limited the amount of public land that could be held by any one individual to 500 jugera, and provided for the distribution of the rest in small homesteads. The aristocracy immediately raised a storm, and induced another tribune to veto the measure. Now, according to the Roman code, no proposal could become law unless all the tribunes were unanimous. Gracchus then secured a popular vote expelling his colleague from the Agrarian law.

tribuneship, and the land-law was passed by the people, B. C. 133. In the mean time, however, Gracchus's year of office expired, and he came up for re-election. The nobles resolved to prevent this by violence.

83. Gracchus, learning this, bade his friends arm themselves with staves ; and when the people began
 His murder. to inquire the cause of this, he put his hand to his head, intimating that his life was in danger. Some of his enemies ran to the senate and reported that Tiberius openly demanded a crown. A body of the aristocrats with their clients and dependents then rushed among the unarmed crowd, and murdered Gracchus with 300 of his adherents, — 133 B. C.

84. Tiberius Gracchus was dead, but his work remained ;
 Agrarian struggle. that is to say, the measure which he had proposed was law, and the commissioners intrusted with the task of allotting the lands prosecuted their labors for two or three years. The nobles, however, obstructed the work as much as possible, so that between them and the champions of the people there was a continuous struggle.

85. This struggle became still more fierce when Caius
 The younger Gracchus. Gracchus, ten years after the death of his brother, claimed and obtained the tribuneship, and then took up that brother's work. The agitation for the agrarian law was renewed, an enactment was made for a monthly distribution of corn to the city poor, and various other reforms were proposed by him. After holding the tribuneship for two years, however, he lost the office through the intrigues of his opponents. The nobles were determined to crush Gracchus ; accordingly, at one of the public assemblies they attacked the partisans of the popular leader, and there ensued a bloody combat (121 B. C.) in which 3000 of his adherents were slain. Gracchus himself fled into a wood across the Tiber ; but, being pursued, he chose to die by the hands of a faithful slave rather than fall into the power of his enemies.

86. The ill-will between the nobles and the people continued just as bitter after the death of Gracchus; and matters finally shaped themselves in such a way that the nobles, or senatorial party, came to be represented by a leader named Sulla, and the democracy, or Commons, by another called Marius. These men came to prominence in the course of two or three wars in which Rome was engaged for twenty-five or thirty years after the time of which we have been speaking; and finally they acquired such power as to bring on a civil strife that deluged Italy with blood.

Rise of Marius and Sulla.

87. The wars just referred to were: the Jugurthine war (111-106 B. C.), the war against the Cimbri (113-101 B. C.), and the Social war (90-89 B. C.), with the details of which we need not concern ourselves; but the fourth contest was of more moment, and needs notice here. This was the Mithradatic war.

Wars of the period.

88. Mithrida'tes, King of Pontus, a bold and able soldier, formed the design of uniting the Asiatic states and Greece in a vast confederacy against the Roman dominion. He began by causing about 80,000 Romans who dwelt in the cities of Asia Minor to be massacred in one day (88 B. C.). He then invaded Greece.

89. The command in this important war was eagerly sought by both Marius and Sulla. Sulla prevailed; he was elected consul and put in command. Marius, being chagrined at this, succeeded in having the popular party set aside Sulla. But the aristocratic general marched to Rome and compelled Marius to flee into Africa. Sulla then set out for Greece, all of which submitted to him, the army of Mithridates being defeated (86-84 B. C.).

90. During the absence of Sulla, Marius returned to Italy. Entering Rome in 86 B. C. he filled the entire city with slaughter, and in particular he caused the murder of the leading senators that had supported his rival. Marius then caused himself to be proclaimed consul without going through an election; but a fortnight later he died.

91. Notwithstanding the death of Marius, the Marian party still continued in power. Sulla, hearing of their successes, hastily concluded a peace with Mithridates, and hurried to Italy (83 B. C.). After a severe struggle, Sulla utterly overthrew the Marians. The blood of massacre then flowed a second time,—in a yet greater stream. Lists of proscribed persons, embracing all who belonged to the people's party, were published every day, and the porch of Sulla's house was full of heads.

92. Having put down all his enemies, Sulla caused himself to be proclaimed dictator for an unlimited time (81 B. C.). He then proceeded to re-organize the government wholly in the interest of the aristo-

cratic party ; but to the great surprise of every one he three years afterwards resigned his power and retired to private life. Sulla died in 78 B. C. ; he was honored with a magnificent funeral, and a monument with the following epitaph written by himself: "I am Sulla the Fortunate, who in the course of my life have surpassed both friends and enemies ; the former by the good, the latter by the evil, I have done them." In the civil wars carried on between Marius and Sulla 150,000 Roman citizens, including 200 senators, perished.

93. We have now arrived at a period in Roman history when all the interest centers in the struggles of a few ambitious men for supreme power. The Struggle of factions. grand days of the republic were over, and a war of factions had begun. This could end only in anarchy, and when a republic falls into anarchy, a supreme ruler is soon welcomed as a deliverer from its horrors. The only question now was *who* in Rome was to be that ruler.

94. After the death of Sulla, the most prominent figure among all the men of the aristocratic party Rise of Pompey. was Cneius Pompey, who had distinguished himself as a lieutenant of Sulla, and afterwards won renown by his management of several important matters in which Rome was engaged,—especially in the suppression of a formidable revolution in Spain under a very able leader named Serto'rius (77–72 B. C.), and in stamping out a fire of revolt kindled by Spartacus, the leader of a band of gladiators, who, joined by a large force of discontented spirits, kept Italy in alarm for two or three years (73–71 B. C.). These exploits made Pompey a popular favorite, and in the year 70 B. C. he was rewarded by being made consul along with a rich senator named Crassus.

95. At the expiration of his year of office he retired to private life, but was soon called upon to His doings in the East. suppress a formidable combination of pirates

who infested the Mediterranean Sea and had their headquarters in Cilicia (in Asia Minor). This task he accomplished in three months. These triumphs, aided by his political influence, enabled Pompey to procure the command in the war against Mithridates, who had renewed his scheme of conquering the Eastern Roman provinces. He was given powers such as never had been delegated to any Roman general. This war lasted for two years (66-64 B. C.), and was marked by a series of brilliant triumphs for Pompey. He utterly crushed Mithridates (who died by self-administered poison), as well as his son-in-law Tigranes, subdued Phœnicia, made Syria a Roman province, and took Jerusalem. Thus with the glory of having subjugated and settled the East he returned to Rome (62 B. C.), where a magnificent triumph awaited him. He was in a position to make himself military sovereign of the Roman world, if he chose to avail himself of his opportunity. We must now see what had been passing in Rome in the mean while.

96. There seem to have grown up, after the death of Sulla, four factions in Rome: the "oligarchical faction," consisting of the small number of families the chiefs of which directed the senate, and in fact governed the republic; the "aristocratic faction," comprising the mass of the senators anxious to obtain the power usurped by a few of their colleagues; the "Marian party," including all those whose families had been prosecuted by Sulla, and who now began to rally, and aspire to power; the "military faction," embracing a crowd of old officers of Sulla, who, having squandered the fortunes they had gained under him, were eager for some revolution that might give them the opportunity to improve their condition.

97. At the head of the oligarchical faction was Pompey; but during his absence in Asia its representative was Marcus Tullius Cicero (born 106 B. C.), who had established his reputation as the first

The four factions.

Leader of the oligarchy.

orator in Rome. He had risen through various offices to the prætorship, and at the time Pompey left for the East aspired to be consul. He did not himself belong to a noble family, but still he made himself the champion of the oligarchy. Though vain and boastful, he was a virtuous and patriotic man.

98. The leader of the aristocratic faction was Crassus, formerly the colleague of Pompey in the consulship, now his personal rival. He was a Of the aristocracy. man of no great ability, but his position and his immense wealth made him influential. (After prodigious expenditures, he died worth \$ 10,000,000.)

99. The leader of the third, or Marian party, was a man six years younger than Pompey or Cicero, who, Julius Cæsar. distinguished in youth for his accomplishments and his extravagance, rose in the year 65 B. C. to the office of edile. This was Caius Julius Cæsar,—a man of pre-eminent ability, one of the greatest that ever lived. He was the nephew of Marius, and now stood forward as the leader of the Marian party. He was of an old patrician family, and took up the cause of the people to serve his own ends.

100. The leader of the military faction was Catiline, who had been one of the ablest and most ferocious Conspiracy of Catiline. of Sulla's officers. He had a large following of debauched young patricians and ruined military men, who thought they would better their fortunes by making Catiline consul. Cicero was his rival, and, receiving the support of the senators, was elected. Enraged at his defeat, Catiline formed a conspiracy of which the murder of Cicero and the burning of Rome were parts. A woman betrayed the plot to Cicero, who denounced Catiline with such fiery eloquence that he had to flee from Rome. With a band of confederates he attempted to reach Gaul; but he was overtaken in Etruria and slain, 62 B. C.

101. If Pompey had been really a great and clear-sighted man, he could, on his return from the East, have easily put himself at the head of affairs. But he was not really such. He was, in fact, rather a lucky general than a great statesman. The oligarchic party began to distrust him, and as the senate under the lead of Cato refused to ratify his measures in Asia, he threw himself into opposition and went over to the popular party. This brought him into close connection with Cæsar.

102. Cæsar and Pompey, finding that they agreed in many of their views, resolved to unite their forces. To cement their union more closely, Cæsar gave his only daughter Julia in marriage to Pompey. For various reasons it was found desirable to admit Crassus to their political partnership, and thus was formed (60 B. C.) that famous coalition known in Roman history as the "First Triumvirate." The object of Cæsar and Pompey was to thwart the senatorial party in every way, and wield all power themselves.

103. The formation of the triumvirate was followed by the election of Cæsar to the consulship (59 B. C.); and when his year of office expired he obtained for himself the government of Gaul for five years, and then for another five. This was probably the great object of Cæsar's desires. No doubt he was already brooding over the design of making himself master of Rome; and for this purpose he would need an army.

104. During the years 58-50 B. C. Cæsar made eight campaigns in Gaul, forming the remarkable series of operations which he afterwards described with such pointed style in his *Commentaries*.

The prominent points in these campaigns are: He arrests the emigration of the Helvetii; expels the Germans under Ariovistus (58 B. C.); completes the conquest of Gaul by subduing the Belgæ (57 B. C.), and the Aquitani (56 B. C.); invades Britain twice (in 55 and 54 B. C.);

penetrates into Germany; overthrows the Gauls, who revolt repeatedly; conquers Vercingetorix, and entirely subdues the country (53-51 B. C.).

105. The result of his eight years' campaigning was that, in the spring of 50 B. C., Cæsar was able to take up his residence in Cisalpine Gaul, leaving the 300 tribes beyond the Alps, which he had conquered by such bloody means, not only pacified, but even attached to himself personally. His army, which included many Gauls and Germans, was so devoted to him that it would have marched to the end of the world in his service.

106. Let us now inquire as to the other two members of the triumvirate. During Cæsar's absence, Pompey and Crassus were elected consuls for the year 55 B. C.; and when their own year of office had expired both obtained important commands: Pompey received the government of Spain, as proconsul, for five years, and Crassus a similar appointment over the East. Soon after this, Crassus was murdered in Parthia; so that the triumvirate became a duumvirate, or league of *two* men, — Cæsar and Pompey.

107. Now between these two men there had for some time been a growing coldness. It was said that Cæsar was a man who could brook no equal, and Pompey a man who could suffer no superior. A feeling of rivalry having once arisen, naturally grew till Cæsar and Pompey became the bitterest enemies. Pompey went over to the aristocratic party to which he had originally belonged, and having been made sole consul for the year 52 B. C., he began to exert his great influence against Cæsar. In this he was supported by the nobles, who dreaded Cæsar's immense power.

108. As the period of Cæsar's command would expire in the year 49 B. C., he had determined to obtain the consulship for the year 48 B. C., since otherwise he would become a private citizen. Accordingly he

demand, though absent, to be permitted to put himself in the lists for the consulate. But it was proposed, through the influence of Pompey, that Cæsar should lay down his command by the 13th of November, 50 B. C. This was an unreasonable demand; for his term of government over Gaul had another year to run, and if he had gone to Rome as a private man to sue for the consulship, there can be no doubt that his life would have been sacrificed. Cæsar, still anxious to keep the peace, offered, at the beginning of the year 49 B. C., to lay down his command if Pompey would do the same; but this the senate refused to accede to, and a motion was passed that Cæsar should disband his army by a certain day, and that if he did not do so, he should be regarded as an enemy of the state.

109. Cæsar promptly took his resolve: he would appeal to the arbitrament of arms. He had the enthusiastic devotion of his soldiers, the great The Rubicon. mass of whom, being provincials or foreigners, cared very little for the country whose name they bore. Accordingly, in January, 49 B. C., he advanced from his headquarters at Ravenna to the little stream, the Ru'bicon, which separated his own province and command from Italy. The crossing of this river was in reality a declaration of war against the republic; and it is related that, upon arriving at the Rubicon, Cæsar long hesitated whether he should take this irrevocable step. After pondering many hours he at length exclaimed, "The die is cast!" and plunged into the river.

110. Pompey concluded not to attempt to defend Italy, but to retire upon the East, where he would Retreat of Pompey. gather a great army and then return to overwhelm the "usurper." Accordingly he retreated to Greece.

111. In sixty days Cæsar made himself master of all Italy. Then marching to Rome he had him- Cæsar master of Italy. self appointed dictator and consul for the year 48 B. C. He showed masterly statesmanship, and soon

brought the general current of opinion completely over to his side.

112. Meantime, Pompey had gathered a powerful army in Thessaly, and thither Cæsar with his legions proceeded against him. The decisive battle between the two mighty rivals was fought at Pharsa'lia, in 48 B. C. It resulted in the utter defeat of Pompey; and as it left Cæsar the foremost man in the Roman world, it must be regarded as one of the great decisive battles of history.

113. Pompey, after his defeat, sought refuge in Egypt; but he was assassinated by the orders of Ptolemy, when seeking to land on the coast of that country. Cæsar, who followed in pursuit, did not hear of his death until his arrival in Alexandria, where messengers from Ptolemy brought him Pompey's head. Cæsar, who was both a generous man and a compassionate foe, turned with horror from the spectacle, and with tears in his eyes gave orders that the head should be consumed with the costliest spices.

114. At Alexandria Cæsar became bewitched by Cleopatra, the young, beautiful, and fascinating queen of Egypt. He even mixed himself up with a quarrel that was going on between her and her younger brother Ptolemy, to whom, according to the custom of the country, she was married, and with whom she shared the throne. This intermeddling led Cæsar, who had but a small force with him, into conflict with the troops of the king. A fierce battle was fought in the city. Cæsar succeeded in firing the Egyptian fleet; but unfortunately the flames extended to the celebrated Library of the city of Alexandria, and the greater part of the magnificent collection of manuscripts was burnt. Cæsar was finally successful: Ptolemy was killed, and Cleopatra was made queen of Egypt. From Alexandria Cæsar marched into Pontus to attack Pharna'ces, son of Mithridates, whom he subdued so

quickly that he described the campaign in the most laconic despatch ever penned: *Veni, vidi, vici*,—"I came, I saw, I conquered."

115. The Pompeian forces that escaped from Pharsalia had established themselves in the Roman province of Africa. They were commanded by Scipio and Cato. Cæsar having settled matters in the East now proceeded against this force, which he utterly destroyed at Thapsus, early in the year 46 B. C. Scipio and Cato killed themselves. One more rally the Pompeians made in Spain, but they were defeated by Cæsar in the decisive battle of Munda (March, 45 B. C.).

116. Cæsar returned to Rome after the battle of Thapsus, the master of the Roman dominion. The republic went out when Cato fell upon his sword at Utica; the monarchy came in with the triumphal entry of Cæsar into Rome in the summer of 46 B. C. It is true Cæsar was not king (*rex*) in name, but he was so in substance. His position as chief of the state was this: he was invested with the dictatorship for ten years,—an arrangement changed soon afterwards to *perpetual* dictator,—and was hailed with the title of *Imperator* for life. The latter title, *Imperator* (meaning *Commander*), was one which belonged under the republic to the victorious general; but it was a temporary title, always laid aside with the surrender of military command. Cæsar was allowed to use it in a special way and permanently, and in his case it had much the meaning of the term *Emperor*,—a word which is simply *Imperator* cut short.

117. Julius Cæsar was a strong, clear-sighted man, who plainly perceived that the old political system of Rome had hopelessly broken down. He believed that peace and prosperity could come only under the firm and just rule of one man. He obtained power by overriding the laws, but he designed to use this power to the

Cæsar's final
victory.

Cæsar and
the State.

His views and
character.

best ends. "I will not," he said in one of his speeches, "renew the massacres of Sulla and Marius, the very remembrance of which is shocking to me. Now that my enemies are subdued, I will lay aside the sword, and endeavor solely by my good offices to gain over those who continue to hate me."

118. Faithful to this promise, he pardoned all who had borne arms against him, and, by making no distinction of parties, labored, and with success, to bring about an "era of good feeling." He instituted a vigorous and honest administration of the provinces; he encouraged trade and agriculture; embellished Rome with temples, theaters, and public places; undertook to drain the Pontine marshes and to dig a new bed for the Tiber; reformed the calendar; and projected a gigantic series of designs for improving and extending the empire he had acquired. Considering that from the time of his return to Rome down to his death there was but a brief interval of two years, it is wonderful what he accomplished.

119. There can be no doubt that the Romans were well satisfied to be under the rule of Cæsar. The republic was a mere name, for liberty had expired when the Gracchi were murdered, and subsequent dissensions were merely contests for power between different factions. Hence the Roman people, weary of revolution, were quite content to find peace under the just though absolute rule of one master.

120. It is important to recognize this as the real state of public feeling, because we shall now have to see that Cæsar fell a victim to assassination, and it might be thought that his overthrow was the people's revolt from monarchical rule. But in truth it was the act of a small knot of conspirators who, with the cry of "Liberty and the Republic" in their mouths, did away with the Emperor to serve their own ends.

121. The chiefs of the conspiracy were Caius Cassius and Marcus Junius Brutus. Both had received great favors from Cæsar; but they thought they had not been honored enough, and they were intensely jealous of the dictator's greatness. These were joined by other malcontents, and the plotters swelled their ranks by representing that Cæsar designed to assume the diadem and the title of king; so that the conspiracy finally included about sixty senators. The conspir-
acy.

122. It is not certainly known whether or not Cæsar thought of taking the name of king. It is known, however, that the consul, Mark Antony, at the feast of the Luperca'lia in the year 45 B. C., offered a regal crown to the dictator: he refused it, — it is said because he saw the people showed displeasure, — and Antony had it entered in the public acts, "that by the command of the people, he, as consul, had offered the name of king to Cæsar, perpetual dictator; and that Cæsar would not accept of it." Cæsar's am-
bition.

123. The plot ripened into a determination to assassinate Cæsar, and the conspirators fixed on the Ides (i. e. 15th) of March as the time of putting the design into execution. Rumors of the plot got abroad, and Cæsar was strongly urged not to attend the senate. But he disregarded the warnings which were given him. As soon as Cæsar had taken his place, he was surrounded by the senatorial conspirators, one of whom, pretending to urge some request, seized his toga with both hands and pulled it violently over his arms. Then Casca, who was behind, drew a weapon and grazed his shoulder with an ill-directed stroke. Cæsar disengaged one hand and snatched at the hilt, exclaiming, "*Cursed Casca, what means this?*" "*Help!*" cried Casca, and at the same moment the conspirators aimed each his dagger at the victim. Cæsar for an instant defended himself; but when he perceived the steel flashing His assassi-
nation.

in the hand of Brutus (Marcus Junius), he exclaimed, "*What! thou too, Brutus!*" (*Et tu, Brute!*) and drawing his robe over his face he made no further resistance. The assassins stabbed him through and through; and, pierced with twenty-three wounds, Cæsar fell dead at the foot of the statue of his great rival, Pompey.

CÆSAR.

124. Julius Cæsar was in his fifty-sixth year, when, on the 15th of March, B. C. 44, he was stricken down. His personal appearance was noble and commanding; he was tall in stature, of a fair complexion, and with black eyes full of expression. He never wore a beard; in the latter part of his life his head was bald; but being quite mindful of his personal appearance, he was in the habit of covering the defect with a laurel chaplet.

125. Intellectually he was distinguished by the most extraordinary genius in the most diversified pursuits. He was at once a general, a statesman, a lawgiver, an orator, a historian, a mathematician, and an architect,—and as he was pre-eminent in all, he would seem truly to deserve the name which Shakespeare gives him,—

“The foremost man of all the world.”

126. Cæsar was upwards of forty years of age before he became prominent in public affairs. In the next fourteen years he subdued Gaul, with its swarms of warlike nations; carried the Roman eagles into Britain and beyond the Rhine; twice conquered Spain; marched through Italy at the head of the legions he had trained; overthrew the armies of Pompey; reduced Egypt to obedience, conquered Pharnaces; and won his final

triumph at Thapsus and Munda, — a series of campaigns that comprised fifty battles, and in which over one million of men fell.

127. Yet his warlike career was but preliminary to his career as a statesman, when, ceasing to destroy, he began to create. His aim was vast and beneficent, — nothing less than the political, social, intellectual, and moral regeneration of the decayed Roman nation. He accomplished only a small part of his plan, yet the work he did still lives after wellnigh two thousand years, and what of it was wise and good remains a part of the permanent possession of civilization.

His plans.

128. It is said that “revolutions never go backwards.” Brutus and his fellow-conspirators struck down Cæsar in the name of liberty; but the blow that leveled the master of Rome did not bring back the republic, — it only insured the appearance of new claimants for supreme power, and consequently new civil wars.

Effect of Cæsar's death.

129. On the occasion of Cæsar's funeral the consul, Mark Antony, delivered an oration over the dictator's body, and to such a height did the feeling of the Romans against the plotters rise, that Brutus and Cassius were obliged to escape forthwith from the city to avoid destruction.

Antony.

130. The condition of affairs left Mark Antony in some respect the representative of Cæsarean principles; but a more direct claimant to the succession appeared in Cæsar's great-nephew, Caius Octavius, then a youth nineteen years old. The dictator had adopted Octavius as his son; so his name became Caius Julius Cæsar Octavianus. Octavius had all the old soldiers on his side, and raised the standard of Cæsar's vengeance.

Octavius.

131. At first Antony and Octavius were at strife; but finally they became reconciled, and associating with them Lep'idus, the “master of the horse,”

Second triumvirate.

the three formed the Second Triumvirate (43 B. C.), and concerted a plan to divide among themselves the supreme authority. In order to do this it was necessary utterly to crush both their personal enemies and the forces of the republic.

132. To accomplish the first object, they began a system of proscription more ruthless and bloody than that of Marius and Sulla. It is recorded that 300 senators, 2000 knights, and many thousands of citizens were sacrificed. The most illustrious of the victims was the famous orator Cicero, whose severe invectives against Antony had procured him the relentless hatred of the triumvir. The aged patriot, while escaping from Rome in a litter, was assassinated.

133. The second object was the destruction of the republican forces. Now Brutus and Cassius, finding their position in Italy to be desperate, had retired to the East, where in Thrace they gathered an army of about 100,000 men. Antony and Octavius pursued them with a still larger force, and the two armies met at Philippi. The republican army was totally defeated (November, 42 B. C.); both Brutus and Cassius killed themselves.

134. The victors now divided the Roman world among themselves, — Antony taking the East, Octavius the West, and Lepidus the province of Africa. But the Roman world was scarcely theirs before they began to quarrel over it. The feeble Lepidus never possessed much influence, and was soon robbed of his share. After this it was quite certain that a contest between Antony and Octavius could not long be delayed, and each began to intrigue against the other.

135. Antony made the headquarters of his half of the Roman dominion at Alexandria. Here he came under the fascinations of Cleopatra, and

Their proscription.

Battle of Philippi.

Quarrels of the three.

Conduct of Antony.

he lost all regard to his character or his interests in her company. He even went so far as to divorce his wife Octavia, the sister of Octavius, and, having married the voluptuous Egyptian queen, he bestowed Roman provinces on her.

136. This conduct was treasonable, and furnished Octavius with a decent pretext for declaring war.

The young Cæsar had been gaining great popularity in Italy; he had consolidated his power and had his legions in fine training. The fleets and armies of the rivals assembled at the opposite sides of the Gulf of Ambracia. After considerable delay, Antony, instigated by Cleopatra, who was present with her Egyptian fleet, determined to decide the contest by a naval battle. The contest took place off the promontory of Ac'tium (on the west coast of Greece), while the hostile armies, drawn up on the shore, were simple spectators. In the midst of the conflict Cleopatra tacked about, and with the Egyptian squadron of sixty sail drew out of the fight. Antony, regardless of his honor, followed after her, and the pair fled to Alexandria. Both the fleet and the force of Antony surrendered to Octavius,

*Battle of
Actium.*

31 B. C.

137. Some months afterwards Octavius advanced to besiege Alexandria. Antony attempted to defend it; but he was abandoned by his troops.

*End of An-
tony.*

Cleopatra retired to a monument she had erected, and caused a report to be spread of her death. Upon this news Antony attempted to commit suicide, and inflicted on himself a mortal wound: hearing, however, in the midst of his agonies, that Cleopatra still lived, he caused himself to be carried to her monument, and expired in her presence (30 B. C.).

138. The end of Cleopatra was even more tragic. The Egyptian queen seems at first to have thought that she would be able to bewitch the young Cæsar; but having in vain essayed her arts on the cold,

Cleopatra.

calculating Octavius, she, sooner than be led in chains to adorn the triumph of the victor, and glut the eyes of the populace of Rome with the sight of the daughter and last of the Ptolemies preceding the chariot of the adopted son of him who had done homage to her charms, gave herself voluntary death by the bite of an asp, or the scratch of a poisoned needle. Egypt now became a Roman province (30 B. C.).

139. There was now no one left to withstand Octavius **Triumph of Octavius.** Cæsar, who thus remained sole master of the great dominion which the mighty Julius had prepared for him. The senate, in fact, was ready to concede to him the entire authority. He indeed went through the farce, soon after his return to Rome, of resigning the imperatorship; but he was *prevailed* on to resume it for ten years, and every ten years after to re-resume it. Gradually all the great offices were united in his person, and he became in fact Emperor of the Roman world. We may count the Roman Empire as beginning with the year B. C. 27, when Octavius was saluted with the new and peculiar title of AUGUSTUS.

ANALYTIC SYNOPSIS FOR REVIEW.

1. Rome under the kings.

General Statement.	Rome is believed to have been founded as a frontier post by the Latins of Alba Longa; but it was from the first almost independent, then wholly so, and finally acquired an ascendancy over all the other Latin cities. The number of kings is said to have been seven; but their history is almost wholly fabulous. Regal rule was ended by the banishment of Tarquin.	LEADING DATES.
		B. C. Founding of Rome 753 End of kingly rule 509

First Epoch, Roman Republic (509-390).

General Statement.	The first epoch of 119 years from the establishment of the republic was a period of struggle external and internal. The Romans had to contend, for their mere existence, with the various neighboring states, and during this epoch they went rather backwards than forwards, as regards the extent of their territory. There was also a struggle of classes, owing to the oppression of the Plebeians by the Patricians; but finally the Plebs were allowed to elect magistrates called tribunes. Soon after, the unwritten Roman law was embodied in the Twelve Tables. Various changes were made in the administration of the government, decemvirs taking the place of consuls, and military tribunes the place of decemvirs. In this unsettled state of affairs Rome fell a prey to the Gauls, who burned the city.	Establishment of the Republic....	509

		Laws of the Twelve Tables..	451
		Military tribunes appointed	444
		Rome captured by the Gauls.....	390

Second Epoch, Roman Republic (390-266).

General Statement.	The Plebeians were again grievously oppressed by the Patricians, and troubles ensued, but a settlement was made by the Licinian constitution, which remedied abuses. With the cessation of internal troubles the Romans began a career of conquest. First, there were the "Samnite" wars and the "Latin" wars. These wars ended in the complete subjugation of these nations and the	Licinian laws passed.....	367

mastery of Rome over all Central Italy. The Romans now turned their attention to Southern or Grecian Italy, where they had to meet Pyrrhus in several battles. At first defeated, they were finally successful; Pyrrhus was compelled to abandon his project, and the southern part of Italy was conquered, thus giving the Romans mastery over the whole Italian peninsula.

Battle of Pandosia	280
Battle of Asculum	279

Third Epoch, Roman Republic (266-133).

The era of foreign conquest lasted 133 years (266-133). First the Romans attacked the Carthaginians, their great rivals. This mighty contest ran through three wars known as the three Punic wars. In the first, lasting 23 years, the Carthaginians were unsuccessful. The Romans after this conquered Cisalpine Gaul. Hamilcar now became general-in-chief of the Carthaginians, and on his death his greater son Hannibal came into command. Hannibal took the aggressive in Spain, and thus began the second Punic War. He won brilliant victories, and maintained himself fifteen years in Italy; but finally was recalled to Carthage and was defeated by the Romans at Zama. Soon after the second Punic War the Romans conquered Macedon and Greece, and made them Roman provinces. The third Punic War was marked by the siege of Carthage, and resulted in the utter annihilation of the Carthaginian power.

Fourth Epoch, Roman Republic (133-27).

General Statement.

The long civil strife which followed Rome's foreign wars resulted from the desperate poverty of the Plebeian class. This class found two champions in the Gracchi, but both were victims to the rage of the aristocracy. The first Mithridatic war now ensued, but was successfully ended by Sulla. Then came the bloody days of Marius and Sulla. Subsequently Pompey rose to power. He had been the leader of the aristocracy, but went over to the people's party, he, Julius Cæsar, and Crassus forming the First Triumvirate. Cæsar went into Gaul, where he prosecuted his campaigns for eight years; but Pompey intrigued against him; so he crossed the Rubicon and made himself master of Italy. The decisive battle between Cæsar and Pompey was fought at Pharsalia, Cæsar being successful; the remnant of the Pompeian forces was crushed at Thapsus. Cæsar was now master; but a conspiracy was formed against him, and he was assassinated. After the death of Cæsar his nephew Octavius formed with Antony and Lepidus the Second Triumvirate. Octavius led his forces against Brutus and Cassius, defeating them at Philippi. Antony and Octavius now quarreled, but the dispute was settled in favor of the latter by the battle of Actium, and soon after Octavius assumed the title of Augustus Cæsar.

CHAPTER IV.

ROME AS AN EMPIRE.

I. AGE OF AUGUSTUS.

140. WHEN Augustus Cæsar at the age of thirty-six became master of the Roman world, there was no open establishment of a monarchical government. On the contrary, most of the old republican forms were kept up; but they were *mere* forms. The senate still sat, but it did little more than vote what Augustus wished; the people still met in their assemblies and elected consuls and magistrates, but only such persons were elected as had been proposed or recommended by the Emperor. Augustus, however, assumed nothing of the outward pomp of a monarch: he was satisfied with the *substance* of supreme rule. The almost uninterrupted festivities, games, and distributions of corn and the like kept the people out of politics; and, what through degeneracy, and what through despair, they were *willing* to be out of politics!

141. The boundaries of the Roman Empire as established by Augustus may be stated in a general way as follows: On the north, the British Channel, the North Sea (Mare Germanicum), the Rhine, the Danube (Ister), and the Black Sea (Pontus Euxinus); on the east, the Euphrates and the Desert of Syria; on the south, the Sahara of Africa; and on the west, the Atlantic Ocean. It extended from east to west a distance of fifty degrees, or about 2700 miles, and had an average breadth of about fifteen degrees, or above 1000 miles.

142. The Roman Empire took in the modern countries of Portugal, Spain, France, Belgium, Western Holland,

Rhenish Prussia, parts of Baden and Wurtemberg, most of Bavaria, Switzerland, Italy, the Tyrol, Austria Proper, Western Hungary, Croa'tia, Slavo'nia, Countries included. Serbia, Turkey in Europe, Greece, Asia Minor, Syria, Palestine, Idumæ'a, Egypt, the Cyrena'ica, Tripoli, Tunis, Algeria, and most of Morocco.

143. The entire Empire, exclusive of ITALY, was divided into 27 "Provinces," which may be conveniently grouped under three heads: 1. The Provinces. Western, or European; 2. The Eastern, or Asiatic; 3. The Southern, or African. The Western provinces numbered 14; the Eastern, 8; the Southern, 5.*

144. Within the circuit of the Roman dominion there were what we may call three civilizations: The three civilizations. the Latin, the Greek, and the Oriental. *Latin* civilization took in the countries from the Atlantic Ocean to the Adriatic; *Greek* civilization, from the Adriatic to Mount Taurus; *Oriental* civilization, the lands beyond to the Euphrates.

145. The area of Latin civilization embraced the peninsula of Italy (its native seat) and all Western Europe, where the Romans appeared not only The Latin. as a conquering but also as a civilizing people. Thus in the three provinces of Spain (Hispania), in the four provinces of Transalpine Gaul (corresponding nearly with the modern FRANCE), as well as in the North African provinces, especially Carthage (which was restored by Cæsar as a Roman colony), the Latin language took firm root, and the manners and customs, and indeed the whole civilization, of those lands became Roman.

146. Greek civilization was spread over Greece and all those parts of Europe and Asia that had been The Greek. Hellenized by Grecian colonists or by the

* Name these from the map opposite p. 182.

Macedonian conquerors. In manners, customs, language, and culture these lands remained Greek, while *politically* they were Roman.

147. Oriental civilization was diffused over the Eastern provinces, especially Egypt and Syria.
Oriental. These countries had, under the rule of Alexander's successors, become to some degree Hellenized; but this influence was on the whole superficial. The peoples of those Oriental lands had never given up their own languages or religious ideas or ways of thinking. Now these peoples, it should be said, did not become *Latinized* either, — they did not adopt the language and civilization of Rome.

148. Within the limits of the Roman Empire under Augustus there may have been in all **ONE HUNDRED MILLIONS** of human beings. Not less than one half were in a condition of slavery; and of the rest, only that small proportion who, under the envied name of Roman citizen (*civis Romanus*), inhabited Italy, enjoyed political independence, or had the smallest share in the government. The various lands and peoples were under Roman legates (half of these appointed by Augustus and the other half by the Senate), who held supreme military command. To the provinces were left, however, their independent municipal constitutions and officers. In Rome and Italy the public peace was preserved by the *pretorian* cohorts, — bodies of soldiers of tried valor, to whom Augustus gave double pay. Throughout the provinces the people were kept in check by the regular troops, — numbering 350,000 men.

149. Of this vast Empire Rome was the metropolis, now
The capital. a city of innumerable streets and buildings, and containing, it is calculated, a population of about two millions and a half. It was in this period that Rome became truly a splendid city. Augustus was able to boast that "he found the city brick and left it marble."

150. In the days of its greatest prosperity the circumference of Rome enclosed by walls was about twenty miles; but there were also very extensive suburbs. The walls were pierced by thirty gates. The most remarkable objects were the Coliseum, the Capitol with its temples, the Senate-House, and the Forum.

Its extent.

151. The great circus, or Circus Maximus, a place reserved for public games, races and shows, was one of the most magnificent structures of Rome. It was capable of containing 200,000 spectators. The Flavian Amphitheater, whose massive ruins are known as the Coliseum, could seat from 80,000 to 100,000 persons. In the arena were exhibited the fights of gladiators, in which the Romans took such savage delight, together with races, combats of wild beasts, etc. Theaters, public baths, etc., were

Circus and Coliseum.

THE COLISEUM.

erected by the emperors, who seemed anxious to compensate the people for their loss of liberty by the magnificence of their public shows and entertainments.

154. The elections of magistrates, reviews of troops, and the census or registration of citizens, were held in the Campus Martius, which was also ^{Campus Martius.} the favorite exercise-ground of the young nobles. It was surrounded by several splendid edifices ; ornamental trees and shrubs were planted in different parts, and porticoes erected under which the citizens might continue their exercise in rainy weather. Hard by was the celebrated Pantheon, or Temple of All the Gods (erected in the reign of Augustus), the most perfect and splendid monument of ancient Rome that has survived the ravages of time.

155. The aqueducts were among the most remarkable Roman structures. Pure streams were sought at a great distance, and conveyed in these ^{Aqueducts.} artificial channels, supported by arches, many of which were more than a hundred feet high. Under the emperors, not fewer than twenty of these stupendous and useful structures were raised ; and they brought such an abundant supply of water to the metropolis, that rivers seemed to flow through the streets and sewers.

156. Rome was inferior to Athens in architectural beauty, but it far surpassed the Grecian city in works of public utility. To enumerate all the ^{General description.} notable edifices would be impossible here ; but we may sum up the matter by saying that the "Eternal City" in the zenith of its glory contained four hundred and twenty temples, five regular theaters, two amphitheaters, and seven circuses of vast extent. There were sixteen public baths built of marble, and furnished with every convenience that could be desired. From the aqueducts a prodigious number of fountains was supplied, many of which were remarkable for their architectural beauty. The palaces, public halls, columns, porticoes, and obelisks were without number, and to these must be added the triumphal arches erected by the later emperors.

157. As the peace of the Roman world was maintained by the strong hand of power, it was at this time

Literature.

that many of those arts that grow best during seasons of national order and prosperity made their greatest progress. Thus many of the best-known Latin writers lived at this time. Augustus himself was a great patron of literary men and artists, and so was his minister, Caius Cilnius Mæcenas. They honored and rewarded eminent writers ; and though we must not forget that many of the distinguished men whose writings add luster to the " Augustan age " had grown up under the republic, still Augustus deserves credit for fostering letters. Nothing will make up for the loss of political freedom ; but it is something that in Rome, when liberty was lost, literature at least flourished.

158. Among the distinguished writers of this age or the times immediately preceding it are : —

Virgil, the author of the epic poem the *Æneid*, a graceful, if not an original, writer.

Horace, author of many poems, odes, satires, and epistles ; a witty, good-humored, and most vivacious song-writer.

Sallust, the historian of the Jugurthine War and the Conspiracy of Catiline ; a very spirited writer.

Lucretius, a writer of didactic poetry, containing passages of noble eloquence and philosophy, along with much that is characteristic of the low tone of thought prevalent in the pagan world.

Catullus, author of lyrics that are among the sweetest and most truly poetic things in the Latin language.

159. These are the most distinguished names in the

Later writers. Augustan age, and they are among the most distinguished in all Roman literature. And

as we shall have no further occasion to recur to Roman literature, we may simply note here among subsequent writers, — Livy, the great historian of Rome ; Ovid, the poet ; Martial, the writer of epigrams ; Pliny, the writer on natural history (killed 79 A. D. by the great eruption from Vesuvius, which buried the cities of Pompeii and Herculæ-

neum); Ju'venal, the bitter satirist; and Tacitus, the philosophic historian of the declining glories of Rome.

160. The reign of Augustus is rendered memorable by the birth of CHRIST at the little village of Bethlehem, in Judæa, — the most momentous event in the spiritual history of the world. Reckoned in our common era, this event took place in the year 4 B. C.*

161. Augustus died in 14 A. D.; so that, counting from his formal accession to title, 27 B. C., he ruled over the Roman dominion for forty-one years.

Birth of
Christ.

Reign of
Augustus.

162. Augustus was succeeded by his step-son, Tibe'rius Clau'dius Nero. It must be remembered that the Roman government was not legally a monarchy; hence Augustus's heir was not necessarily the heir of his power. But the Emperor had adopted Tiberius as his own son, and the subservient senate voted him all the honors Augustus had held.

His successor.

163. In the note below † the scholar will find a reference

* Our method of counting time was not introduced till the year 532 A. D. The calculation was erroneous, and it was found ten centuries afterward to be deficient four years of the true period; but as the alteration of a system that had then been adopted by nearly all Europe would have made great confusion in civil and ecclesiastical affairs, the error was, by general consent, allowed to remain, and we continue to reckon from this era (A. D., *anno domini*, that is, "in the year of our Lord"), which, however, lacks four years and six days of the real Christian epoch.

† The following table gives a list of the Roman Emperors, with the dates of their reigns:

	A. D.	A. D.		A. D.	A. D.

2. POLITICAL HISTORY.

164. During nearly three centuries after the death of Augustus, the empire remained, as far as political arrangements were concerned, pretty nearly as he had left it. Though the senate still continued to sit, and consuls to be elected, yet the Roman world soon became thoroughly accustomed to the rule of one man. At first, the empire was inherited as a birthright by those who could claim descent from Augustus, or who had been adopted into the family. Nero was in reality the last emperor of the family of Augustus, though all who succeeded to the empire still went on calling themselves *Cæsar* and *Augustus* to the last.

165. It soon came about that the real power behind the throne was the soldiery. The troops, and especially the "Pretorian Guard," took it upon themselves to dispose of the sovereignty as it pleased them, and it was rare that the senate ventured to refuse to register the decree of the soldiers. To raise favorite generals to the purple, and then to murder them for the sake of the largesses which it was customary to receive in case of a new accession, was the favorite pastime of the troops; and it sometimes happened that there were several emperors at the same time, different armies throughout the empire having each appointed one.

166. Augustus bequeathed as a valuable legacy to his successors the advice of confining the empire within those limits which nature seemed to have placed as its permanent boundaries: on the west, the Atlantic Ocean; the Rhine and the Danube on the north; the Euphrates on the east; and on the south the deserts of Africa and Arabia. The only accession which the Roman Empire received during the first century of the Christian era was the province of Britain. "After a war of about forty years, undertaken by the most stupid [Claudius], maintained

by the most dissolute [Nero], and terminated by the most timid [Domitian] of all the emperors, the greater part of the island of Britain submitted to the Roman yoke."* The next addition to the Roman territory was made by Trajan in the early part of the 2d century. This consisted of the province of Dacia, which was bounded by the Dneister, the Theiss, the Lower Danube, and the Euxine Sea.

167. It has already been seen that the Roman Empire consisted of ITALY and the PROVINCES, and that Roman citizen-ship. in point of government the two divisions were on a very different footing. The inhabitants of Italy were Roman citizens, whereas the provincials were under the military rule of Roman officials, — legates and proconsuls. But the same salutary maxims of government which had secured the peace and obedience of Italy were little by little extended to the countries outside of Italy. A nation of Romans was gradually formed in the provinces by the double expedient of introducing colonies and of admitting the most faithful and deserving of the provincials to the freedom of Rome. Finally, in the time of Caracalla, in the early part of the 3d century A. D. (211–217), the old distinction between Romans and provincials was wholly abolished. Roman citizenship was given to all the free inhabitants of the empire.

168. By this time the Latinizing of the Western provinces was completely effected; that is to say, in language, manners, and ideas, the inhabitants of Gaul, Spain, Northern Africa, and Illyria had become thorough Romans. A very interesting proof of this is furnished by the fact that many of the best and bravest of the later emperors were provincials, or *barbarians*, as they would before this have been called.

169. When there ceased to be any distinction between Italy and the rest of the Roman Empire, the importance

* Gibbon's Decline and Fall of the Roman Empire.

of Rome as the center of the imperial dominion was very much diminished. This change is marked by the fact that, in later times, Rome was quite forsaken by the emperors, who found it better to live near the frontiers, whence they could keep watch against outside foes ; and it is still more emphatically marked by a new order of things, which was begun by the Emperor Diocle'tian.

170. Diocletian (283 – 305 A. D.) was one of a series of able Illyrians that rose to the purple. Finding the unwieldy mass too great for the administration of a single individual, he took a general named Maxim'ian as his colleague : he divided the imperial power between himself and Maximian, Diocletian retaining the East, while Maximian ruled over the Western, or Latin-speaking, peoples. Not content with this division, Diocletian took an assistant and made his colleague do the same. These sub-rulers were called *Cæsars*, and it was intended that they should afterwards succeed to the imperial power. This arrangement did not last long, and, after various struggles, the whole empire was reunited under Constantine the Great, in A. D. 323.

171. Constantine made a change which had a great effect upon the later history of the Roman world. He removed the capital of the empire to the old Greek city of Byzan'tium, on the Bos'phorus, which he greatly enlarged and called *New Rome*, but which has been better known ever since as Constantino'ple (Greek *polis*, a city, — the *city of Constantine*). Even before this, Rome had, as we have seen, ceased to be the usual dwelling-place of the emperors, who commonly lived at Milan, Nicome'dia (Bithyn'ia), and elsewhere ; but the transfer of the capital to a Greek city is a proof of how completely the *Empire* had come to overshadow *Rome* and *Italy*.

172. Theodosius I. was the last Emperor who reigned over the whole Roman Empire. On

Rome loses its importance.

Division of power.

Constantine.

Theodosius.

his death, in A. D. 395, the vast dominion was divided between his two sons, — Hono'rius ruling in the West, and Arca'dius in the East.

173. From that date the history of Rome divides itself into two distinct histories, — that of the West-
Division of the empire. ern or Latin Empire, and that of the Eastern, Greek, or Byzan'tine Empire. As to the Eastern Empire, we shall have to follow its history down through the Middle Ages, till its destruction by the Turks in the 15th century. But for the present, it is with the Western Empire alone that we are concerned, for with the fall of the Western Roman Empire ancient history ends. This downfall took place in the year 476 A. D. ; but we shall defer to a subsequent section the narrative of the last days of Rome.

3. SPREAD OF CHRISTIANITY.

174. While the political events about which we have just
The new power. learned, and which filled up the five centuries of imperial Rome, were taking place, a change far more momentous than any political revolution was coming over the minds of men. This was the mighty moral transformation effected by Christianity.

175. In the time of Augustus the different peoples and
State of the world at the birth of Christ. nations under the Roman sway had a great variety of religions, but all, with the exception of the Jews, were pagans and polytheists. While Augustus was ruling over a hundred millions of fellow-polytheists, there took place in an obscure corner of the Roman dominion an event the importance of which the wisest Roman could not have foreseen. This was the birth of Christ, the founder of a religion which was to overspread the polytheistic nations, dissolve the ancient creeds and philosophies, and renovate the faith, the thoughts, the whole life of the civilized world. Now the diffusion of Christianity was power-

fully aided by the *fact* of the Roman Empire, — by the unity of government under the empire ; hence it has been truly said that “ the Roman empire may be defined as a compulsory assemblage of polytheistic nations in order that Christianity might operate over a large surface at once of that polytheism which it was to supersede and destroy.”

176. Jesus Christ was crucified in the nineteenth year of the reign of Tiberius. At Antioch, in Syria, where Barnabas and Saul taught the faith, the disciples were first called “ Christians.” And then began those journeys by which St. Paul carried the gospel through Asia Minor and Greece, until he was himself carried a prisoner to Rome, to die there in the reign of Nero. The Christian religion silently but surely spread itself ; first among the Jews, then among the Greeks, or eastern, and lastly, among the Latin, or western, Gentiles.

177. The existence of Christianity in the Roman Empire is first signalized by the persecutions to which the Christians were subjected. In the reign of the brutal Nero the first persecution took place, but it was confined to the city of Rome. A great fire, which consumed a large part of the city, took place. Men said that the emperor’s own hand had kindled the flame, out of mere madness, and that, while the burning continued, he sat calmly looking on, singing verses to the music of his lyre. To divert suspicion from himself, Nero resolved to direct it upon the Christians. We shall tell the sequel in the language of Tacitus, the great Roman historian, who was born during the reign of Nero. The passage which we quote is of great interest, because it contains the earliest mention, by any profane writer, of the name of Christ.

“ With this view [that is, to divert suspicion], Nero inflicted the most exquisite tortures on those men who, under the vulgar appellation of Christians, were already branded with deserved infamy. They derived their name and origin from one CHRIST, who in the reign of Tiberius had

suffered death by the sentence of the procurator Pontius Pilate. For a while this dire superstition was checked, but it again burst forth; and not only spread itself over Judæa, the first seat of this mischievous sect, but was even introduced into Rome, the common asylum which receives and protects whatever is impure, whatever is atrocious. The confessions of those who were seized discovered a great multitude of their accomplices, and they were all convicted, not so much for the crime of setting fire to the city, as for their hatred of human kind. Some were nailed on crosses, others sewn up in the skins of wild beasts and exposed to the fury of dogs; others, again, smeared over with combustible materials, were used as torches to illuminate the darkness of the night. The gardens of Nero were destined for the melancholy spectacle, which was accompanied with a horse-race, and honored with the presence of the emperor, who mingled with the populace in the dress and attitude of a chariotcer. The guilt of the Christians deserved indeed the most exemplary punishment, but the public abhorrence was changed into commiseration, from the opinion that those unhappy wretches were sacrificed, not so much to the public welfare, as to the cruelty of a jealous tyrant.”*

178. A question here arises: Why was it that many of the emperors who saw without concern a thousand forms of religion subsisting in peace beneath their sway, singled out the sect of the Christians to make them the sole objects of persecution? The answer to this question is found in several facts. And first, in the proselyting ardor of the Christians. The empire was tolerant of all faiths; but it was not tolerant of a faith which taught that the gods of Rome and of all other nations were alike false, and which strove to win over all mankind to that belief. Then the Roman mind, while it looked with respect on all *national* faiths, viewed with suspicion and disgust a creed that was not sanctioned by the belief of any *nation*, but was held only by a *sect*. Moreover, the early Christians were in the habit of holding their meetings secretly and at night; this was regarded as illegal in principle, and as possibly dangerous in results. Summing up the several facts, we may say that the persecutions of the

Real causes of
the persecu-
tions.

* Tacitus, Annals, XV. 44.

Christians were owing to political reasons rather than to religious intolerance.

179. A striking proof of this is found in the fact that the Christians suffered most under good and reforming princes like Trajan and Marcus Aurelius, men of pure and humane character, while under the infamous emperors they were generally let alone. Proof.

180. In spite of persecution the Church constantly advanced and made converts, and in the first half of the 3d century, which was a period of calm, the Christians were permitted to erect and consecrate convenient edifices for the purpose of religious worship ; to purchase lands, even at Rome itself, for the use of the community ; and to conduct the elections of their ecclesiastical ministers in a public manner. Notwithstanding severe persecutions under Decius and Vale'rian, the doctrines of Christianity continued to spread among all classes of people everywhere. Indeed, it almost seemed that these persecutions were needed for the sifting of the Church ; the gold was tested and refined in a fiery furnace, and, like a sturdy young oak, Christianity, amid all these great and frequent storms, only struck its roots the deeper into the soil. Growth of Christianity.

181. At last it became plain that a deadly struggle between the old faith and the new was inevitable, and this came in the reign of Diocletian and Maximian, at the commencement of the 4th century A. D. Diocletian's persecutions. Gale'rius, the son-in-law of Diocletian, and the *Cæsar* under him, was a special enemy of the Christians, and he persuaded the emperor to issue an edict (February 24, A. D. 303) commanding all Christian churches to be pulled down, all Bibles to be flung into the fire, and all Christians to be degraded from rank and honor. Scarcely was the proclamation posted up, when a Christian of noble rank tore it to pieces. For this he was roasted to death. A fire which broke out in the palace twice within a fortnight was made a pretext

for very violent dealings with the Christians. Those who refused to burn incense to idols were tortured or slain. Over all the empire the persecution raged, except in Gaul, Britain, and Spain, where Constan'tius Chlo'rus ruled as Cæsar under Diocletian's colleague, Maximian. When Diocletian and Maximian abdicated, and Galerius held supreme rule in the East, he indulged all his fury against the Christians. Says a historian: "With little rest for eight years, the whip and the rack, the tigers, the hooks of steel, and the red-hot beds continued to do their deadly work. And then, in A. D. 311, when life was fading from his dying eye, Galerius published an edict permitting Christians to worship God in their own way."

182. This was the turning-point in the great struggle: it was plain that the most violent efforts of
Result. despotism were unable to crush that which was by its very nature divine and deathless.

183. We come now to a remarkable epoch in the history of Christianity, namely, the reign of a Roman
Constantine. emperor who himself professed Christianity. Con'stantine was the son of Constantius Chlorus. On the death of his father in Britain Constantine was at once proclaimed emperor by the soldiers there. He had immediately to enter on a contest with no fewer than five rivals, and the circumstance attending his conversion is associated with an event that took place during this period of warfare.

184. In A. D. 312, while on the march to attack one of
His conver- his rivals (Maxen'tius), near Rome, Constan-
sion. tine is reported to have seen with his own eyes the luminous trophy of the cross in the sky, placed above the meridian sun, and inscribed with the following words: BY THIS CONQUER [in Greek, *En toutō nika*; in Latin, *In hoc vince*]. In the battle that followed Maxentius was completely overthrown. It is said that this decided Constantine to be a Christian.

185. The early church historians also add that the following night Christ appeared to Constantine in a dream and commanded him to frame a ^{The Labarum,}

THE LABARUM.

similar standard, and under it to march with an assurance of victory against all his enemies. This is the origin of the celebrated *Labarum*, or standard of the cross, displayed by the Christian emperors in all their military expeditions. The top of the *Labarum* was adorned with a mystic X, representing at once the cross and the initial of the Greek word for Christ.

186. The first fruit of Constantine's conversion appeared in a famous decree called the Edict of Milan, ^{Christianity the state religion.}

A. D. 313: this restored peace to the Christian church. The establishment of Christianity as the religion of the state took place in 324, when the defeat of the last of his rivals made Constantine sole master of the Roman world.

187. He immediately, by circular letters, exhorted all his subjects to imitate the example of their sovereign by embracing the divine truth of ^{Constantine's policy.} Christianity. It is calculated that in Constantine's time about a twentieth part of the whole population of the empire were professed Christians. The emperor did not forbid paganism, but chose rather to work by ridicule and neglect. With public money he repaired the old churches and built new ones, so that in every great city the Pagan temples were faced by Christian churches of rich and beautiful architecture. The Christian clergy were freed from taxes. Sunday was proclaimed a day of rest. And, to crown all, Constantine removed the seat of government to a new capital, — Constantinople, — which was essentially a Christian city.

188. Julian, known as Julian the Apostate, who became emperor in A. D. 361, made a strong effort to **Paganism forbidden.** restore the fallen gods ; but this effort was in vain, and the ruin of paganism was completed at the close of the 4th century. By this time the Christians were the great majority in most parts of the empire ; and Theodosius gave the final blow to the heathen faith by prohibiting under severe penalties the worship of the old gods.

189. In closing our review of the first spread of Christianity, we must note that the new faith, in **Intellectual influence.** addition to its direct effect on the belief, the lives, and the conduct of men, had also important *intellectual* results. It gave the mind of the age great subjects to grapple with ; and as the despotism of the imperial government crushed out all political speculation, the intellect and the enthusiasm of the nations freely turned to the grand problems of the "City of God."

190. There thus arose a series of theological writers both in Greek and Latin, who are known collectively as the Christian Fathers, among whom the following are the most famous : —

Tertul'lian. Born at Carthage in A. D. 160, — first of the Latin writers of the Church, — chief work, his "Apology for Christians," written about A. D. 198.

Or'igen. Born in Egypt A. D. 185 or 186, — editor and commentator of the Scriptures, — wrote in Greek.

Cyp'rian. Archbishop of Carthage in the middle of the 3d century, — chief work, "Unity of the Church," — martyred under Valerian.

Am'brose. Born about A. D. 340 in Gaul, — Archbishop of Milan, — chief work, *De Officiis*, — vindicated the authority of the priesthood over even emperors and kings, by condemning Theodosius I. to a long and weary penance for his massacre of the Thessalonians.

Athana'sius. Born in Alexandria, end of the 3d century, — Patriarch of Alexandria, — the great champion of Trinitarianism against Arius.

Greg'ory Nazian'zen. Born early in the 4th century in Cappadocia, — for a while Patriarch of Constantinople, — noted as a writer of theology and religious poetry.

Chrys'ostom. (Gold-mouth, from his eloquence.) Born at Antioch, A. D. 354, — Patriarch of Constantinople, — his works are in Greek.

Jerome. Born in A. D. 340 in Dalmatia, — especially learned in Hebrew, — founder of Monasticism, — chief work, a translation of the Bible into Latin (known as the Vulgate, a version for the common people, — *vulgus*).

Augustine. Born in Numidia, in Africa, A. D. 354, — Bishop of Hippo (in Africa), — is known as the Father of Latin Theology, — a man of powerful intellect and eloquence, — chief works, "On the Grace of Christ," "Original Sin," the "City of God," and his "Confessions" (an autobiography).

4. ROMAN LIFE, MANNERS, CUSTOMS, ETC.*

191. The most remarkable garment of the Romans was the *toga*, made of pure white wool, and in shape resembling a segment of a circle; narrow at first, it was folded so that one arm rested as in a sling; but in late days it was draped in broad, flowing folds round the breast and left arm, leaving the right nearly bare. Dress.

Though its use in the streets was in later times exchanged for a mantle of warm-colored cloth, called the *pallium* or *lacerna*, yet it

ROMAN COSTUMES.

* Abridged from Collier's "Domestic Life in Imperial Rome."

continued to be the Roman full dress ; and in the theater, when the emperor was present, all were expected to wear it. The Romans always kept the head uncovered, except on a journey, or when they wished to escape notice. Then they wore a dark-colored hood, which was fastened to the *lacerna*. In the house *solææ* were strapped to the bare feet ; but abroad the *calceus*, nearly resembling our shoe, was commonly worn. On the ring-finger, the fourth of the left hand, every Roman of rank had a massive signet-ring. There were fops who loaded every finger with jewels ; and we are told of one poor fellow who was so far gone in foppery as to have a set of lighter rings for summer wear, when his delicate frame could not bear the weight of his winter jewels.

192. The dress of Roman ladies consisted of three parts, — an inner *tunic*, the *stola*, and the *palla*. The Ladies' dress. The *stola*, which was the distinctive dress of Roman matrons, was a tunic with short sleeves, girt round the waist, and ending in a deep flounce which swept the instep. The *palla*, a gay-colored mantle, was worn out of doors. It was often sky-blue, sprinkled with golden stars. The brightest colors were chosen ; so that an assembly of Roman *belles*, in full dress, was a brilliant scene, sparkling with scarlet and yellow, purple and pale green. The hair, encircled with a garland of roses, was fastened with a gold pin, while pearls and gold adorned the neck and arms.

193. The early Romans lived chiefly on bread and pot-herbs ; but when wealth was introduced by their conquests, luxury seized all ranks, and, as we have already seen, the imitation of Oriental customs completely sapped the abstemious virtues of the old Romans. To many, in the degenerate ages of Rome, the great ends of life were to eat the most delicious food, and to eat as much of it as possible. Roman meals were three, — *jentaculum*, *prandium*, and *cœna*. *Jentaculum*, taken soon after rising,

consisted of bread, dried grapes or olives, cheese, and perhaps milk and eggs. At prandium, the midday meal, the Romans partook of fish, eggs, and dishes cold, or warmed up from the last night's supper. Then, too, some wine was drunk. But cœna was the principal meal, taken about the ninth hour, and on the whole corresponding to our dinner. It began with eggs, fish, and light vegetables, such as radishes and lettuces, served up with tasty sauces, all being intended merely to whet the appetite for the more substantial dishes to follow. Then came the courses (*fercula*), of which, in all their wonderful variety, no just idea can be given here. Among fish, turbot, sturgeon, and red mullet were greatly prized; among birds, the peacock, pheasant, woodcock, thrush, and fig-pecker. The favorite flesh-meat was young pork; but venison was also in great demand. The courses were followed by a dessert of pastry and fruit.

194. While eating, the Romans reclined upon low couches, which were arranged in the form *triclinium*, Table usage. making three sides of a square. The open space was left for the slaves to place or remove the dishes. The place of honor was on the middle bench. In later times round tables became common, and then semicircular couches were used. There were no table-cloths; but the guests wore over the breast a linen napkin (*mappa*), which they brought with them. Instead of knives and forks two spoons were used, — one, *cochlear*, small and pointed at the end of the handle; the other, *lingula*, larger and of uncertain shape. The splendor of a Roman feast was greatly marred by the oil lamps, the only light then used. The lamps themselves were exquisite in shape and material, as were all the table utensils; but the dripping oil soaked the table, while the thick smoke blackened the walls and ceiling, and rested in flakes of soot upon the dresses of the guests.

195. At feasts, instead of the toga, short dresses of red or other bright colors were worn. Before the drinking

began, chaplets were handed round. For these roses, myrtle, violets, ivy, and even parsley were used. Before they were put on, slaves anointed the hair with nard and other sweet unguents. Wine was almost the only drink used. Before being brought to table it was sometimes strained through a metal sieve or linen bag filled with snow, and was called black and white according to its color, just as we talk of red and white wines. The famous Falernian, celebrated by Horace, was of a bright amber tint. Besides pure wine they drank *mulsum*, a mixture of new wine with honey, and *calda*, made of warm water, wine, and spice.

Drinking. 196. The Romans spent much time in their splendid baths. The cold plunge in the Tiber, which had braced the iron muscles of their ancestors, gave place, under the empire, to a most luxurious and elaborate system of tepid and vapor bathing, often repeated seven or eight times a day. At the baths the gossip of the day was exchanged.

Baths. 197. The theater, with its tragedies and comedies, the circus, and the amphitheater supplied the Romans with their chief public amusements. At the circus they betted on their favorite horses or charioteers; at the amphitheater they reveled in the bloody combats of gladiators, — the most brutal of all the Roman pastimes. At the trumpet's sound throngs of wretched men — captives, slaves, or convicted criminals — closed in deadly strife. The trodden sand soon grew red; yet on they fought with parched lips and leaping hearts, for they knew that a brave fight might win for them their freedom. Ere long, hacked and bleeding limbs began to fail, and dim eyes turned to seek for mercy along the crowded seats. There were times when the dumb prayer was answered, and the down-turned thumbs of the spectators gave the signal for sparing life; but too often mercy was sought in vain, and the sword com-

Amusements.

pleted its work. Combats of gladiators with wild beasts often took place. Whole armies sometimes thronged the scene. When Trajan celebrated his triumph, after his victories in Dacia, 10,000 gladiators were exhibited at once.

198. Roman books were rolls of papyrus-bark, or parchment, written upon with a reed pen, dipped in lamp-black or sepia. The back of the sheet Books. was often stained with saffron, and its edges were rubbed smooth and blackened, while the ends of the stick on which it was rolled (whence our word *volume*, "a roll") were adorned with knobs of ivory or gilt wood. Letters were etched with a sharp iron instrument (*stylus*, whence our word *style*) upon thin wooden tablets coated with wax. These were then tied up with linen thread, the knot being sealed with wax and stamped with a ring.

199. The Romans had three forms of marriage, of which the highest was called *confarreatio*. The bride, Marriage. dressed in a white robe with purple fringe, and covered with a bright yellow veil, was escorted by torch-light to her future home. A cake (*far*) was carried before her, and she bore a distaff and spindle with wool. Arrived at the flower-wreathed portal, she was lifted over the threshold lest — omen of evil — her foot might stumble upon it. Her husband then brought fire and water, which she touched; and, seated on a sheepskin, she received the keys of the house. A marriage supper closed the ceremony.

200. The household work was done by slaves of various classes. In earlier times a few sufficed; but Slaves. in the days of the empire it was thought a disgrace not to have a slave for every separate kind of work. And so, besides those who managed the purse, the cellar, the bedrooms, and the kitchen, there were slaves to carry the litter, or to attend as their masters walked abroad. Some, of higher pretensions, were readers, secretaries, and physicians. Then, for amusement, there were musicians,

dancers, buffoons, and even idiots. But all may be ranked under two heads, — bought slaves and born slaves. There was a slave-market, in which the common sort were sold like cattle ; but the more beautiful or valuable were disposed of by private bargain in the taverns. Prices ranged from \$ 20 to \$ 4000.

201. The disinterment of the town of Pompeii, which was overwhelmed by an eruption of lava from Mount Vesuvius in A. D. 79, enables us to form a very correct idea of what a first-class Roman house was. The principal apartments were on the ground-floor. Passing through the unroofed *vestibule*, often between rows of graceful statues, the visitor entered the house through a doorway ornamented with ivory, tortoise-shell, and gold. On the threshold, worked in mosaic marble, was the kind word *Sal've* (welcome). Then came the *atrium*, or great central reception-room, separated from its wings by lines of pillars. Here were placed the ancestral images ; and here, too, was the *focus*, or family fireplace dedicated to the La'res. Farther in lay a large saloon called the *peristyle*. The floor was generally a mosaic of colored marble, tiles, or glass ; the walls were carved and painted ; gilt and colored stucco-work adorned the ceilings ; while the window frames were filled with talc or glass. On the roofs were bright gardens. In houses like these might be found ivory bedsteads, with quilts of purple and gold ; tables of precious wood ; sideboards of gold and silver, loaded with plate, amber vases, beakers of Corinthian bronze, and glass vessels from Alexandria, whose tints rivaled the opal and the ruby.

202. Of course the scholar will understand that these descriptions apply exclusively to the wealthy. The poor, The common people lived as best they could, and we know very well that the richest were without a great many comforts and conveniences which even the poor now command.

5. LAST DAYS OF ROME.

203. In the section on the political history of Rome we brought the story of the great empire down to the time of its final dismemberment, in 476 A. D. Review.
We did not, however, narrate the circumstances attending the catastrophe ; accordingly we shall now briefly refer to these.

204. In the 5th century of our era many things portended the fall of Rome. Chief of these was the fact that the Romans had really ceased to exist as a nation. The *empire* had absorbed the *nation*. Signs of decay.
We have already seen that the Roman *race*, which conquered the world, was finally swallowed up by the world which it conquered. The blood itself was corrupted by alien admixture ; luxury further demoralized the people ; and the very fact that they were willing for the five hundred years of the empire to sit under an imperial despotism, shows that they were unfit to be free.

205. The removal of the capital by Constantine from Rome to Byzantium was a signal proof of the fact that Italy had ceased to be the center of Change of capital.
the Roman world. From this it was an easy step to the division of the empire, which took place under the sons of Theodosius, the last emperor who ruled over the whole of the Roman dominion. Thenceforward we may regard the Roman Empire as confined to Italy with the Western provinces, or Gaul, Spain, etc., while the Eastern empire, comprising what we have called the Greek and the Oriental civilizations, pursued a career of its own.

206. In this state of facts the Western empire fell a prey to the new and vigorous Teutonic, or German, tribes that for centuries had inhabited the The Teutons.
forests of the North. Ever since the time of Augustus the different German tribes had been most dangerous enemies

of Rome, and many of the most valiant emperors had had much ado to defend the empire against them. One important result of the contact of the "northern barbarians" with the Romans was that the Teutonic tribes became acquainted with Roman civilization and with Christianity ; so that most of them became Christians before they settled in the empire, or very soon afterwards.

207. The first great lodgement of the Teutons within the limits of the Roman Empire took place by permission of the Roman Emperor Valens, in the last half of the 4th century. The great Germanic family of the Goths at that time formed an extensive kingdom in the lands north of the Danube, — the lands we now call Moldavia and Wallachia. This region had been Trajan's province of DACIA, but the Romans had withdrawn from it under Aurelian. The Goths were gradually becoming Christians of the Arian sect under the teaching of a bishop named Ulfilas, whose translation of the Scriptures into the Gothic tongue is the oldest Teutonic writing that we have.

208. Now, in the latter half of the 4th century the Goths found themselves pressed upon by an invasion of Huns, — Tartars, or Kalnucks, who had been driven out of Eastern Asia, and were at this time making their way into Europe. In their despair the Goths asked the Emperor Valens (who ruled over the East, while Valentinian was emperor of the West) to allow them to cross to the south side of the Danube, and thus put that stream between them and their hideous foes. Leave was granted, on condition that they should give up their children and their arms. The bargain was struck at once. Roman boats were provided, and for many days and nights the broad river was torn into foam by the ceaseless splash of oars. The fugitives, surrendering their children with little concern, gladly paid away all they had as bribes to the Roman officers for leave to keep their arms. In this way

an immense body of fierce warriors (men, women, and slaves numbered nearly a million souls) settled, sword in hand, within one of the great natural frontiers of the empire, 376 A. D.

209. The Goths had humbly vowed that they would forever make it their grateful duty to guard the Roman borders. In spite of this they had ^{Their behavior.} hardly been allowed to settle south of the Danube when they turned their arms against Valens. It must be said, however, that for this they were not wholly without excuse; the officers of the emperor treated them in the most scandalous manner, and left them to starve. In this plight they resolved to help themselves; they accordingly advanced towards Constantinople. The imperial army met them near Hadriano'ple, where a battle took place that was most disastrous to the Romans, and in which Valens lost his life, A. D. 378. The Goths, having now nothing to fear, spread themselves over the fertile country westward to the confines of Italy and the Adriatic Sea.

210. Under Theodosius the Great, who became emperor of the East in A. D. 379, the Goths were brought to capitulate, and settle down quietly, and large ^{Alaric.} numbers took service in the Roman armies; but this course was only preparing the inevitable result. When the two feeble sons of Theodosius divided between them the Roman world, the Visigoths (i. e. Western Goths) revolted, and, hoisting their chief, Alaric, upon their shields, according to their national mode of electing a king, precipitated themselves upon Italy. Rome was captured and sacked (A. D. 410), and all Southern Italy was overrun.

211. And now the great Western empire was fast dissolving. In the early part of the 5th century three ^{Signs of dissolution.} fragments broke off from the decaying trunk. The province of Britain was evacuated by the Romans and was soon overrun by the German tribes called Angles and

Saxons. The various Teutonic tribes were pressing into Gaul, and from Gaul into Spain. Spain was conquered by Vandals, Sueves, and other German races ; while Gaul was filled with Franks and Burgundians and Goths, — all of whom belonged to the great Teutonic family. The province of Africa, too, was lost ; for a band of Vandals under Genseric passed over from Spain to Carthage, which was conquered in A. D. 439.

212. Meanwhile Attila the Hun had gone forth from his log-house on the plain of Hungary, at the head of half a million savages, to conquer the world. Crossing the Rhine, he pierced to the center of Gaul ; but at Châlons he was defeated by the united power of the Romans, Goths, and Franks, A. D. 451. In this memorable battle, Aryan civilization and Tartar despotism met in a life-and-death struggle, and the nobler triumphed. Being defeated in Gaul, Attila climbed the Alps and overran Italy, pillaging and destroying up to the very gates of Rome. It is a strange fact that it was through the persuasion of the Christian bishop, Leo, that Attila was induced to return to Hungary. Here he soon afterwards broke a blood-vessel. So died one whose savage boast it was that grass never grew on a spot where his horse had trodden. His great empire immediately fell to pieces.

213. No sooner had Attila departed than Genseric, the Vandal chief of Africa, crossed over from Carthage and anchored his ships at the mouth of the Tiber. This time the persuasion of Leo could not save the city. Rome was captured (A. D. 455), and for fourteen days Vandals and Moors wrecked and pillaged without mercy. Shiploads of treasure and crowds of captives were carried over the sea to Carthage.

214. During these events there were still emperors of the West, and their names will be found in the list. But they were mere nonentities, for the

Downfall of
Rome.

real power was in the hands of the barbarians. At last the Roman senate voted that one emperor was enough, and that the Eastern emperor, Zeno, should reign over the whole empire ; but at the same time Zeno was made to trust the government of Italy to Odoacer, chief of the German Herulians, who took the title of Patrician of Italy. The last of the Western Roman emperors was Romulus Augustulus, a handsome but feeble youth. Him they pensioned off in A. D. 476. Then, "when Odoacer was proclaimed king of Italy, the phantom assembly that still called itself the Roman senate sent back to Constantinople the tiara and purple robe, in sign that the Western empire had passed away." *

* White's "Eighteen Christian Centuries."

ATTILA BEFORE ROME.

SECTION IV.

MEDIÆVAL HISTORY.

INTRODUCTION.

1. MODERN history, in a comprehensive sense, begins with the downfall of the Western Roman Empire; for with that event the volume of ancient history was closed: new actors then appeared on the stage, and a new civilization arose. It will, however, be convenient to consider the fourteen centuries that have elapsed since the breaking up of Rome as divided into two parts. The first part constitutes what is usually called the Middle Ages. This period embraces one thousand years; that is, it extends from about the close of the 5th to the close of the 15th century of our era. From the close of the 15th century down to the present time is modern history in its narrower sense.

2. It was during the thousand years from the 5th to the 15th century that the civilization of modern Europe was ripening. In many respects this period seemed a relapse into barbarism, and the interval from the 5th to the 11th century is sometimes called specifically the *Dark Ages*. But in a juster view it was the *germinating* season: the seeds of modern civilization, cast into the soil, were quickening in new institutions and new nations; so that when we see modern society in the 15th and 16th centuries assuming the fixed shape which it still wears, we must remember that it grew into that shape in the antecedent thousand years.

CHAPTER I.

THE NEW RACES.

3. THE historical races of Europe comprise four grand divisions of the great Aryan stock, — the Græco-Latins, the Celts, the Teutons, and the Slaves, or Slavonians. Historical
races of
Europe.

4. In the ancient history of Europe we have been occupied exclusively with one of these races, — the Græco-Latins. The three other races — the Celts, Teutons, and Slavonians — belong wholly to modern history. Græco-Latins.

5. It is known that the ancestors of these races came originally from Asia, where they formed one family with the forefathers of the Hindoos and Persians, — the term Aryan, or Indo-European, being used to indicate their common lineage. The migration of these races into Europe was at a period that antedates recorded history (probably as far back as 2500 B. C.). Unity of
Aryan races.

6. The evidence of language goes to show that the first wave of migration brought the race which we designate as Celts. These established themselves in Central Europe. After a time, however, they were pressed upon by the Teutonic incomers, and the result was that the Celts were driven into Western Europe, while the Teutons possessed themselves of Central and Eastern Europe. Whether the forefathers of the Hellenic and Latin races appeared previous to or subsequent to the Teutons is mere matter of conjecture. At a subsequent date the Slavonic race made their appearance in Europe ; and the effect of this was that the Teutons were wedged into Central and Northwestern Europe, while the Slavonians overspread the whole of the great Eastern plain. Order of
migration.

7. The original civilization of ancient Europe was confined to the two Mediterranean peninsulas, Ancient Aryan civilization. Greece and Italy, where a favored branch of the Aryan race attained to social organization and to a high development in culture, while their brethren, the Celts, Teutons, and Slaves, still remained in an undeveloped condition, without written language, or literature, or the useful or fine arts, or the varied appliances of civilization. Outside of Greece and Italy the European world was a world of barbarians.

8. The Greeks had no influence whatever in civilizing Influence of Rome on the Celts. the barbarians; but it was different in the case of Rome. Of the three races, the Celts first came in contact with the Romans. The Gauls of Cisalpine Gaul were Celts, and we have seen that these were brought into subjection by the Romans under the republic, and that they received the Roman franchise at the hands of Julius Cæsar. Under the same conqueror the vast population of Transalpine Gaul (France) was brought under the rule of Rome, and in the end Roman citizenship was extended to the whole mass. The same thing took place in the case of the Celt-Iberians of Spain. The Celts of the British Islands, also, were received into the Roman family. The result of their contact with the Romans was that the Celtic populations of Gaul and Spain had become thoroughly Latinized and Christianized before the breaking up of the Western empire.

9. The Teutons do not begin to affect the course of Teutons. history till we come to the series of events attending the downfall of Rome. It is now that the Germanic race commences its existence, now that it begins to play its mighty part. The history of the Middle Ages is the history of the incorporation of Teutonic, or Germanic, barbarians with the Latin and Celtic elements; modern society is the result of the blending of the two; and

it derives ingredients from both, — from the barbarians the love of personal liberty and the sense of independence, from the Romans the forms of a long-established civilization.

10. In a general way, the terms Teutonic, Gothic, Germanic, are all used as synonymous, and are employed indifferently to designate this mighty central family of Europe. Its unity is evidenced by the kinship of the forms of Teutonic speech. And this individuality of speech, as we might suppose, accompanies an individuality of race, so that, in the analysis of the component elements of European civilization, that which is Teutonic is readily recognizable as a thing quite apart from that which is classic or Celtic or Slavonic.

11. The chief Germanic tribes were the Goths, the Franks, the Vandals, the Burgundians, the Lombards, the Saxons, the Angles, and the Scandinavians.

12. The earliest home of the Goths was Scandinavia, where we can still mark their dwelling-places by such words as Godoland, Godesconzia (Castle of the Goths), and, plainer still, Gothland. But the roving spirit natural to barbarism would not let them rest content with their native swamps and forests. They began to push southward about A. D. 200; and we soon find them in Central Europe in three great divisions, — Visigoths (i. e. *West* Goths), Os'trogoths (i. e. *East* Goths), and Gep'idæ (*Laggards*).^{*} The Goths were the first of the Teutons to come under the influence of Christianity. A considerable time before the downfall of the Western Empire they had been converted from paganism to the form of Christianity called Arianism.

13. Of some of the other Germanic tribes we have al-

^{*} The circumstances under which the Goths were admitted within the limits of the Roman Empire have already been told. See page 208.

ready caught a glimpse or two in the confused and shifting scenes attending the breaking up of the Western Empire. Thus pressed by the Gothic invasions, a mingled host of Vandals, Sueves, and Burgundians left the uplands between the springs of the Rhine and the Danube early in the 5th century. The Burgundians settled in Eastern Gaul, and have left their memorial in the name of the district of *Burgundy*. The Vandals and Sueves pushed on to Spain and founded a kingdom in the northwest corner of the peninsula. This was before the downfall of Rome. But the kingdom did not last long; for the Visigoths, following soon after, defeated the Sueves and Vandals, and founded a Visigothic kingdom in Spain about A. D. 414. This may be called the first of the modern kingdoms of Europe. Meantime the fierce Vandals, leaving behind them their name in "Andalu'sia" (once *Van'dalos*), crossed to Africa, where they founded a state of which Carthage was the center. It did not endure, being absorbed a century afterwards in the Eastern Empire.

14. The Franks (from an old German word signifying a *battle-ax*) we first find inhabiting what we now call Belgium and the lower courses of the Rhine; but in the stormy period just before the downfall of Rome they pressed into Gaul. Under their leader, Clovis, they took firm root in Gaul, conquered the Burgundians who were in the southeast and the Visigoths who were in the southwest, and thus, just about the time Rome fell, established that kingdom of the Franks which afterwards came to be called *France* (from *Francia*, the land of the Franks).

15. Of those particular German tribes that were directly concerned in the downfall of Rome we have already seen something. First were the Visigoths, who swarmed down on Italy. It will be remembered that Odoacer, chief of the Visigothic tribe of the Heruli, was made *Patrician*, or king of Italy, in A. D. 476. We shall

Movements of
tribes.

Franks.

Germans in
Italy.

afterwards see that the Visigoths were succeeded first by the Ostrogoths and then by the Lombards. The original home of the Lombards was in Jutland ; but they afterwards moved to the banks of the Elbe ; then, passing southeast towards the Danube, they made it a starting-point for their march upon Italy, where, as we shall see, they displaced the Ostrogoths at the end of the 6th century, and where the name Lom'bardy still points out the scene of their greatest triumph.

16. The Saxons (knife-men, from *Sachs*) at first occupying Holstein, soon spread over the basin of the Weser. Two kindred tribes — Angles and Jutes — filled the peninsula of Denmark. The various tribes in the low countries along the North Sea are known as Low Germans, and their languages as the Low German type of the Teutonic speech. They had never come in contact with the Romans, and were still pagans when Rome fell. These tribes are of great interest to us, because it was roving bands from among them that in the 5th century crossed over to Britain and laid the foundations of *England*, the land of the Angles, and began the Saxon kingdom and the *English* language.

17. We have now named the chief Teutonic tribes with the exception of the Scandinavians. We shall not hear of them till about the 9th and 10th centuries, when they appear as *Norsemen*.

18. The fourth representative of the Aryan stock in Europe are the Slavonians, or Slaves, of the great Eastern Plain. They do not begin to play any important part in history till well on in the Middle Ages. The word "slave" (borrowed from the proper noun *Slave*) is sadly suggestive of the woes they suffered during the long wars of the Middle Ages. The Poles belonged to the Slavonian race ; but the foremost national representative of this stock are the Russians. Russia, however, was not a civilized country till comparatively modern times.

19. Europe is mainly possessed by Aryans, but not wholly. In the centuries of confusion wild Non-Aryan races. hordes from the Ural Mountains swept down on the Danube. We have seen how the Tartar Huns under Attila overran Europe. They were defeated, but not entirely driven out of Europe. They all pressed upon one point, — modern Hungary, with its grain-growing vales and gem-producing hills. Lastly came the Mag'yars, who were also Mongols or Tartars, and who, settling down in the basin of the Danube, stayed there. They became Christianized and civilized about 1000 A. D., and gradually took shape as the noble Hungarian nation. The Turks, who captured Constantinople and overthrew the Byzantine Empire, were also Mongols, or Tartars, and they have retained a foothold in Europe (Turkey) up to the present time.

20. We must now glance at the languages of the new nations that arose on the ruins of the Roman Empire. At the time the Teutonic tribes forced their way into Italy and the western provinces of the Roman Empire, Latin had become the common speech of Gaul and Spain, no less than of Italy. The old Celtic of Gaul and the Celt-Iberian of Spain, which were spoken before the Roman conquest, lived on only in a few out-of-the-way corners. Thus the language which the Teutonic settlers found prevailing was Latin, — not pure Latin, of course, but still Latin. As the Teutonic settlers were far outnumbered by the native populations, they had to learn Latin in order to communicate with the people of the provinces; but in learning the tongue they further changed and corrupted it to some extent. Accordingly the common language of Italy, Gaul, and Spain became a sort of corrupt Latin, which was called *Roman*, while classical Latin was still written by scholars. Gradually in these three countries differences of dialect arose, and the common Roman gradually developed into the Italian, French, and Spanish: these languages are

still called the *Romance* tongues, to show their derivation from the speech of the Romans.

21. In Britain the Germanic invaders, as we shall find, did not mix with the Celtic-speaking Britons ; hence the language of Anglo-Saxon England ^{English.} was purely Teutonic, and it did not become affected by Romance influence until England was conquered in the 11th century by the French-speaking Normans.

22. The new nations of purely Teutonic stock that arose in Germany and Scandinavia were in their ^{German.} speech wholly unaffected by Latin influence ; so that their languages were unmixed Teutonic. These are the German, Dutch, Swedish, Norwegian, Danish, etc.

23. The Slavonic people speak languages of their own, — languages which belong to the great Aryan ^{Slavonic.} stock of tongues, but which are quite distinct from the Romance tongues on the one hand and the Germanic tongues on the other.

CHAPTER II.

THREE CENTURIES OF HISTORY.

I. THE BYZANTINE EMPIRE.

24. WHEN the feeble hand of Rome let go, in her decay, the Latin provinces of the empire, the tradition, and in some respects the substance, of Eastern Empire. Roman dominion still continued in the East. The Western Empire, as we have seen, went all to ruin, and finally passed into the hands of the barbarians; but the Eastern Empire was not involved in the universal wreck, and for a thousand years after the downfall of the Latin Empire,—during which time the new nationalities and the new civilization of Europe were coming into being,—the Eastern, Greek, or Byzantine Empire, as it is called, continued to subsist, though in a state of premature and perpetual decay.

25. The Byzantine Empire was in the meridian of its glory in the 6th century during the long reign Reign of Justinian. of Justin'ian, A. D. 527–565. Justinian was famous for his buildings, especially for the great church of St. Sophia at Constantinople; but his name is still more honorably connected with the mighty work of putting the laws of Rome into the shape of a regular code. Nobody could know the law, for there were so many contradictory decrees and decisions. With the aid of a great jurist named Tribo'nian, and other learned men, that complete system of Roman law called the *Civil Law*, which has formed the groundwork of the law of most of the nations of Europe (England the most notable exception), was reduced into what are called the *Code*, the *Institutes*, and the *Pandects*.

26. We shall not be greatly concerned with the affairs of the Eastern Empire, because progress lay not there, but in

the West. Byzantine civilization, with its polish and learning and culture on the surface, was petrified and dead at the core, while it was the so-called "barbarous" races of Western Europe that alone held the promise of the future. Still, it is necessary constantly to bear in mind the existence of the Eastern Empire, and also the fact that the emperors at Constantinople claimed to rule over all the dominion of their predecessors; for this claim was put forth whenever there was any chance of making it good.

2. ITALY DOWN TO CHARLEMAGNE.

27. It has been seen that the Western Empire came to an end when the Visigothic chief, Odoacer, became king of Italy. Odoacer went on governing, professedly by authority derived from the Emperor of the East, but in reality giving very little heed to the Byzantine court. In the mean time the Ostrogoths, or Eastern Goths, had established an Ostrogothic kingdom between the Black Sea and the Adriatic, which was ruled by their young hero-king Theod'oric, or Dietrich. They were partly allies, but quite as much enemies, of the Emperor of the East; so the Emperor Zeno gave Theodoric a commission to march into Italy and bring that country back to the empire. The march of Theodoric was the emigration of an entire people, — the soldiers being accompanied by their wives, children, and aged parents, with all their effects in an immense number of wagons. After a three years' struggle Odoacer was compelled to capitulate (A. D. 493), and he was soon after assassinated by his rival at a solemn banquet.

28. Theodoric secured his conquest by distributing one third of the lands of Italy to his soldiers in military tenures. This partition was effected with very little violence to the ancient possessors, and the

Nature of Byzantine history.

The Ostrogoths.

Reign of Theodoric.

Goths were instructed to spare the people and to reverence the laws. Under Theodoric's wise rule Italy revived, and Romans and Ostrogoths lived in peace and plenty: the fair-haired Goths, still wearing their furs and brogues, carried the sword, while the Romans, wrapped in the flowing toga, held the pen and filled the schools. So passed three-and-thirty years, until Theodoric died, in A. D. 526, and then frightful scenes of blood were enacted over his fallen throne.

29. In the confusion that followed, the Byzantine government took the opportunity to interfere. At this time the Emperor of the East was Justinian. Reconquest by Justinian. Justinian, the first able ruler that had sat on the throne of Constantinople since the downfall of the Western Empire. His general, Belisa'rius, a man of great military talent, now marched with the imperial forces into Italy, and captured Rome. Nar'ses, the successor of Belisarius, completed the overthrow of the Ostrogothic power in Italy, A. D. 553. Italy was thus reduced to a Byzantine province, and was governed by rulers appointed from Constantinople and called Exarchs of Raven'na.

30. Three years after the death of Justinian (A. D. 565), Italy, then a dependency of Constantinople and governed by an exarch residing at Raven'na, was overwhelmed by the last of the three great Teutonic deluges. The Lombards (so called from their long *bardi*, or spears,) moved from Central Europe, crossed the Alps, and descended into the basin of the Po, settling in the extensive district known even yet as Lombardy. They took possession of this region, and made Pavi'a their capital, A. D. 568. The Lombards treated the Italians with great cruelty, and committed ravages on every side. Among the results of such oppression was the flight of various Roman families to the islands and lagoons at the head of the Adriatic, where, a few years before, had been laid the foundations of the Venetian state. Lombard invasion.

31. While the Lombards overran the greater part of Italy, the Byzantine power still retained Ravenna, Rome, Naples, a portion of the coast-line, and most of the southern part. So we see that the Eastern Empire upheld its title in the peninsula, and for two hundred years the Lombard kings and the exarchs of Ravenna divided Italy between them. The last Lombard king was Deside'rius, who was made prisoner by Charlemagne in A. D. 774. This brings the history of Italy down to the time when it falls into the general history of the Empire of Charlemagne, and concerning this we are to learn fully hereafter.

3. BEGINNINGS OF FRANCE.

32. In the stormy period, when the Western Roman Empire was falling to pieces, various Teutonic tribes established themselves in Gaul. There were Visigoths and Burgundians and Franks, but in the end the Franks under Chlod'wig, or Clovis (which is the same as Ludwig, or Louis), got the upper hand; so when Clovis fixed his capital at Paris (Lute'tia), in A. D. 507, we may say that the foundation of France was laid. When the Franks came into Gaul they were pagans, but they were soon converted to be Christians.

33. The Franks were too powerful and too far off for the Byzantine emperors to have much real authority over them; so they were held to be friends of the empire, and from Constantinople a gold crown and purple robes were sent to Clovis.

34. On the death of Clovis, his dominions were divided among his four sons. For over a century, during the whole period of the first Frankish dynasty (called Merovin'gian, after Merowig, the supposed grandfather of Clovis), there is nothing to relate but a series of crimes and violences. Latterly the Frankish kings became mere imbeciles, and were too weak to be wicked even.

35. In this state of affairs a remarkable arrangement was made: the real power passed into the hands of a sort of prime minister styled the Mayor of the Palace, — an officer chosen by the nobles to be the guide and controller of the sovereign. As the Mayor of the Palace had the command of the army, he was the real king and carried on all the affairs of the nation, while the phantoms of royalty called the “sluggard kings” (*rois fainéants*) combed the long yellow hair which they regarded as the sign of their kingship. Mayors of the Palace.

36. One of the most celebrated of the Mayors of the Palace was Karl, or Charles, Martel, who upheld the Frankish power most vigorously, and, what is more, by his defeat of the Saracens in A. D. 732, saved all Europe from being subjugated by Mohammedan rule. Charles Martel.

The Saracenic invasion will be related in a subsequent chapter.

37. The son of Charles Martel, Pepin, succeeded his father as Mayor of the Palace; but under him this absurd arrangement was ended. He shut up the puppet-king in a convent, and was himself made king of the Franks and anointed such by the Pope A. D. 753. Thus the second, or Carlovin'gian, dynasty began. Now, Pepin's son and the inheritor of his crown was that very Karl, or Charles, who is known in history as Charlemagne; and about him and his doings we shall learn more fully hereafter. Pepin.

4. BEGINNINGS OF ENGLAND.

38. We must now look for a moment at another series of events happening in an obscure corner of the once great empire of the West, and see how the foundations of the nation that afterwards rose to be England were laid. The Roman troops had been withdrawn Anglo-Saxon conquest.

from the province of Britain about half a century before the downfall of Rome, and the Britons, who belonged to the

Celtic race, were left to shift for themselves. About the middle of the 5th century various Teutonic tribes belonging to the Low-German stock, and coming from the old Low-German lands by the Elbe and the Weser, invaded Britain and won for themselves new homes there. They knew nothing and cared nothing for the language or arts of Rome, and they did not, like the Franks and Goths, adopt the language and religion of the Romans. These swept everything before them, and the native Celtic Britons were killed, enslaved, or driven to the mountain regions of Wales and North Britain.

39. Among these Low-German invaders there were three main tribes, — the Angles, Saxons, and Jutes. The name *Jute* has left no memorial in England; but the English people are still often spoken of as belonging to the *Saxon* race, while the speech which arose in the island from the intermixture of the various German dialects took the name of *Anglo-Saxon*, and Britain changed its name to *England*, or the land of the *Angles*.

40. The German immigrations to England went on from the middle of the 5th to the close of the 6th century ; so that in little more than a hundred years the greater part of that land which had been the Roman and Christian province of Britain had become the heathen land of the Angles and Saxons. In the course of the following century the Anglo-Saxons were Christianized by Roman missionaries. Various little kingdoms were formed, and wars were waged, — wars that, as Milton says, are of no more importance than “the battle of kites and crows,” — till finally, early in the 9th century, under Egbert, who was a contemporary and friend of Charlemagne, the various petty dominions were united in the one kingdom of England. Growth of England.

5. RISE OF THE SARACENS.

41. We now come to a remarkable chapter in European history, — the invasion of Europe, the land of the Aryans, by a Semitic race, the followers Subject.

of the famous Moham'med. Connected with this is the rise of a new religion and of a vast dominion that played a great part in the history of the Middle Ages.

MAHOMETAN EMBLEMS.

42. Ma'homet, or Mohammed, was born at the sacred city of Mecca, in Arabia, in the year 570 or 571. Till the age of forty he lived without exciting much remark, and was known only as an able, rich, and enterprising merchant, honorable in his dealings, and strictly truthful in all that he said. He could neither read nor write ; but his mer-

cantile journeys to various parts of the peninsula, as well as

to Syria and Palestine, had enlarged his store of information. In his frequent retirements to a mountain cave for secret thought and study, he developed a religious system of his own. He one day, at a meeting of his kinsmen, made the startling announcement that he had received a Divine commission to reform the faith and practice of the whole Arabian nation. He taught that though both the Jewish and the Christian religions were sent from God, yet he had himself received a more perfect one than either. He now called upon all his friends and kinsmen to acknowledge his authority, forsake their idols, and worship the one only true God.

43. There can be no doubt that in his own country
 His system ; Mohammed was a great reformer, that he gave
 its value. his countrymen a far more rational religion than they had been practicing, and that in the furnace blast of religious enthusiasm the scattered Arab tribes were fused into one nation. The doctrines of Mohammed, written down from time to time, received the name of the *Koran*, — that is, the “Reading” ; and the religion itself was called *Islam*, — that is, “Salvation.”

44. His wife and a few other immediate relatives were
 Hegira. the prophet's first disciples, and these did not increase very rapidly. The people of Mecca denounced him as a madman or an impostor, and in a little time he was forced to flee from Mecca to save his life. He betook himself, with his disciples, to what is now Medi'na. The date of this flight, or *Hegi'ra*, as the Arabians call it, — July 15, 622 A. D., — has been adopted ever since as the chronological era in Mohammedan countries. At Medina he was received with open arms, — his doctrines having already made a number of converts in that place ; and here he built his first mosque.

45. A complete change now came over Mohammed, — the dreamer became a red-handed soldier. “The sword,”

cried he, "is the key of heaven and hell"; and by the sword Islam was to be forced upon all men. Koran and sword. Tribe after tribe was subdued; and before the lapse of ten years the whole peninsula acknowledged the sovereignty of Mohammed, and could boast of an unmixed population of *Moslems*, or True Believers. The prophet was preparing to carry the new religion beyond the bounds of Arabia, when he was cut off by a fever at Medina in A. D. 632.

46. Mohammed was succeeded in his power by rulers called his *Caliphs*, or Successors, the first of whom was his father-in-law, Abu-beker. Conquests of the Caliphs. They were at once spiritual and temporal rulers. The proselyting spirit of Mohammed had been communicated to his successors, and they began a long series of invasions, wars, and conquests. They everywhere gave men the choice of three things, — Koran, tribute, or sword. By these means the religion of Mohammed was spread over a large part of Asia and Africa, and we shall presently see that it made its way into Europe also.

47. The first countries assailed were the Oriental possessions of the Byzantine Empire. In the reign of The East. Abu-beker, Syria and Mesopotamia were subdued by Arabian armies. Under the next caliph, Omar, Egypt was conquered and Northern Africa overrun. In the course of their Egyptian conquests the victorious Moslems are charged with having burned the great Alexandrian Library; but recent writers say it must have been destroyed long before Mohammed's day. The Arabs, or Saracens, as they were also called, met with comparatively little resistance in the Oriental countries, the countries beyond Mount Tau'rus; and this may be accounted for by the fact that these were the parts of the Roman Empire in which both Roman law and Christianity had taken least hold. Thus the Eastern Empire was shorn of all its Oriental posses-

sions ; and even the farther East — Persia and the lands beyond, to India — was added to the Moslem dominion.

48. In the West, however, a stout resistance was encountered. The Saracens besieged Constantinople, against which they carried on a siege of eight years (A. D. 668–675) ; but every assault was repelled by torrents of terrible Greek fire. A second siege, forty years afterwards, met a like result. In North Africa, too, they encountered long and obstinate resistance ; but finally the whole northern coast — Cyre'ne, Trip'oli, Carthage — was subdued ; and in A. D. 710 a host of turbaned Arabs, with unsheathed scimitars, under Tarik-ben-Zaid, crossed the narrow strait into Spain, and landed on the rock which commemorates the name of their leader ("Gibral'tar," i. e. *Jebel Tarik*, the Mountain of Tarik).

49. It will be remembered that a Visigothic kingdom had been established in Spain ; but Rod'erick, the "last of the Goths," was defeated on the field of Xeres, and the Saracens established themselves firmly in Spain. In the course of a few years they had possession of the whole peninsula, with the exception of the mountainous districts in the north, where the little Christian kingdom of the Astu'rias maintained itself.

50. The ambition of the Saracens now overleaped the Pyrenees. They obtained a lodgement in Southern Gaul ; and after a time an able Saracenic commander, Abd-el-rahman, led a powerful Moham-medan army northward to subdue the land of the Franks. As far as the Loire everything fell before him, and it seemed that all Europe would come under Moslem sway.

51. It was in the hour of need that Charles Martel appeared as a champion for Christendom. Gathering a powerful army, he met the Saracens between Tours and Poitiers [*pwät-yea'*]. A desperate battle, which lasted for seven days, ensued ; but on the seventh

day the Saracens were defeated with great slaughter, A. D. 732. This victory arrested forever the progress of the Mohammedan arms in Europe, and procured for Charles the expressive surname of "the Hammer" (*Mar tel*), by which he is known in history.

52. While the Saracens were stopped from pushing their conquests farther into Europe, they firmly established themselves in Spain, where they ^{Foothold in Spain.} founded a kingdom that lasted for seven hundred years,—that is, till the very close of the Middle Ages.

53. For a short time the vast dominion which the Saracens had conquered held together, and a ^{Division of Saracenic empire.} single caliph was obeyed in Spain and in India. But soon disputes arose as to the right of succession to the caliphate: wars and secessions took place, and in A. D. 755 the Saracenic empire was divided,—one caliph reigning in Spain and another in Bag'dad.

54. In the East, the most distinguished of the Saracenic rulers was Haroun-al-Raschid (Aaron the ^{Events in the East.} Just), who became caliph in A. D. 786, and was a contemporary of Charlemagne. In the *Arabian Nights* we find a vivid picture of the city he ruled and the life he led. After the death of Haroun, the Eastern dominion of the Saracens was rent by civil strife; one province after another broke off from the caliphate, till in the 11th and 12th centuries it fell a prey to the Turks.

55. In Spain, on the division of the Saracenic power, the rule was in the hands of the Ommi'yad ^{In the West.} line, and the capital was at Cor'dova. From this city the scepter of the Ommi'yades ruled during 283 years (from A. D. 755—1038); but in the 11th century the supremacy of the Saracens gave place to the Moorish empire in Spain.

56. In the intellectual history of the Middle Ages the Saracens played a remarkable part. When Europe was

sunk in the grossest ignorance, this clever people were actively engaged in the cultivation of science, Saracenic learning, learning, and the arts. The schools of Cordova vied with those of Bagdad in the collection of books and the encouragement of science, and from them proceeded nearly all that was original in the medicine, physics, and metaphysics of Europe during the Middle Ages.

For additional details see chapter on "Civilization in the Middle Ages," page 282.

ANALYTIC SYNOPSIS FOR REVIEW.

- | | | |
|--------------|---|---|
| Spain..... | { | A Visigothic kingdom founded here just before the downfall of Rome, — first of the new kingdoms, — lasts for three centuries, till overthrown by the Saracens in the first half of the 8th century. |
| The Franks. | { | The foundations of the Frankish kingdom laid by Clovis, beginning of the 6th century, — Merovingian dynasty continues for about a century, — superseded by Pepin, son of Charles Martel and father of Charlemagne, who becomes king of the Franks about the middle of the 8th century. |
| England | { | Invasion of Celtic Britain by Low-German tribes, Angles, Saxons, etc., just before the downfall of Rome, — formation of various petty kingdoms, — all become practically united as ENGLAND, in the early part of the 9th century, under Egbert. |
| Italy | { | The first barbarian kingdom of the Visigoths under Odoacer established A. D. 476, — overthrown in less than twenty years by the Ostrogoths under Theodoric, — Ostrogothic kingdom lasts sixty years, — then overthrown by the Eastern empire, and ruled by a Byzantine Exarch, — the Lombards take possession of all Northern Italy, — and the Lombard kings and the Byzantine Exarchs rule Italy till the time of Charlemagne. |

CHAPTER III.

EMPIRE OF CHARLEMAGNE.

57. AN interesting chapter in the history of the Middle Ages is now before us. We are to see how the ruins of the dilapidated Western Empire were for a time rebuilt into an imposing structure by the genius of a great man, the grandest figure of the Middle Ages, — Charlemagne.

58. Charlemagne was the son of Pepin, the first of the Carolingian monarchs, — that Pepin who shut up the imbecile puppet-king of the Merovin-

gian line and assumed the sovereignty of the Franks. He was born about A. D. 742. The real name of this great man was Karl, that is, Charles. Though best known by his French name of Charlemagne (Charles the Great), we must remember that he was no Frenchman in our sense of the term, but a thorough Teuton in birth, instinct, speech, and residence.

59. The kingdom of the Franks, to which Charlemagne fell heir on the death of his father, formed an extensive dominion comprising portions of the two countries we now call France and Germany, — for it must be remembered that the specific countries, France and Germany, did not yet exist at all.

60. At this time — the latter half of the 8th century — Italy was divided between the Lombards and the Eastern

emperors, England had come into existence, but only as a number of feeble and warring states, Spain was under the rule of the Moslems.

Contemporary events.

61. In the mean time the land of the Franks was lifting itself from out the surrounding barbarism of the new races, and was the center of that Teutonic civilization which was struggling into existence. It is important to bear in mind the actual condition of the European world at the time Charlemagne came on the stage, for it will help us to understand the work he did, how far he succeeded and how far he failed.

Situation of the Franks.

62. The ruling idea of Charlemagne was the re-establishment of the Roman Empire, — the building up on German soil of that Colossus which had toppled over because it rested on the too narrow basis of Latin nationality. In executing this design he aimed to use all the elements of civilization that the times presented, and especially these two great elements, — the political ideas and instincts of the Teutons, and the adhesive power of the Christian Church. Hence we find him, throughout his whole career, carefully cherishing all those old German institutions upon which the mass of his people looked with deep reverence, while at the same time we behold him the protector of the Pope and the loyal and ardent champion of the Church.

Charlemagne's design.

63. It was in the effort to realize his grand idea that Charlemagne undertook the numerous wars and expeditions that filled the forty-six years of his reign. We shall not enter into the details of these wars ; but it is needful to understand their object and their result.

Object of his wars.

64. The most important of Charlemagne's military enterprises were directed against the fierce pagan nations of Germany and the wild Scythians in the outlying lands beyond. To appreciate the impor-

His foes.

tance of these we must try to realize that the eastern frontier of the Frankish land, that is, the eastern boundary of Charlemagne's kingdom, on the German side of the Rhine, ran into and abutted on the extensive stretch of country in Middle Europe that was still in the hands of the various uncivilized tribes. As long as these nationalities remained in their warlike, savage, and pagan condition, they would press heavily on the struggling civilization of the Frankish kingdom, and would endanger, if not utterly destroy, its progress. Hence to subdue and especially to Christianize these tribes — to extend the domain of organized and law-governed society into the desert waste of Teutonic barbarism — was a main object with Charlemagne.

65. With the Saxon confederation, formed by various pagan tribes on the Weser and the Elbe (the Wars with the Saxons. same tribes from among which the Saxons and Angles, who conquered Britain three centuries before this, had gone forth), Charlemagne had the greatest trouble. He repeatedly marched into their country and subdued them; but they constantly rose up again, and it was only after some terrible acts of vengeance, — for example, he one day had 4200 prisoners hanged, — that they at length submitted to be baptized and to become peaceable subjects.

66. Soon after this the Bava'rians attempted to render themselves independent of the Frankish power by the assistance of the Avars, a Tartar race living in what we now call Hungary (then *Pannonia*). Charlemagne overpowered the Bavarians, incorporating Bavaria with his German territory; and he then revenged himself on the Avars by conquering them, taking their treasures, and annexing Hungary to his dominion. The result of Charlemagne's conquests on the east side of the Rhine was that Germany was for the first time all united under one head, and on that side the Frankish kingdom was extended to the confluence of the Danube with the Theiss and the Save.

67. Against the Saracens in Spain Charlemagne made an important expedition. The capture of Saragos'sa laid Ar'agon and Navarre' at his feet, and he united the whole country as far as the Ebro to his own kingdom as a Spanish province. During his return the rear-guard, under Roland, suffered a defeat in the valley of Roncesval'les, in which the bravest champions of the Franks were destroyed. This somewhat tarnished the laurels Charlemagne had won in Spain, but did not undo the substantial results of the campaign.

Saracens.

68. We must now see what Charlemagne did in Italy. At this period the Lombards were very troublesome to the Pope, and frequently assailed the Roman territory. Accordingly, when Pope Adrian I. called on Charlemagne for aid, the Frankish monarch crossed the Alps, defeated the Lombards, shut up their king in a monastery, and himself assuming the famous "iron crown" of Lombardy, united the whole of Upper Italy to the kingdom of the Franks (A. D. 773). At the same time he confirmed the gifts made by Pepin to the Pope.

Italy.

69. The general result of all the wars and conquests which we have described was that by the year 800 Charlemagne, who had inherited from Pepin a kingdom scarcely equal to all Gaul, found himself lord of a dominion as large as the ancient Roman Empire of the West, and extending from the Ebro (in Spain) on the west to the Elbe in the northeast, the Theiss (Hungary) in the southeast, and including half of Italy, with Corsica, Sardinia, and the Bal'earic Isles. He fell heir to a *kingdom*; he was now master of an *empire*.

Extent of
Charlemagne's
dominion.

70. The year A. D. 800 forms the climax of Charlemagne's reign. The sovereign had gone in splendid state to visit Italy. On Christmas day Charlemagne and his court were attending divine service in the church of St Peter's, at Rome. Suddenly, while

Crowned emperor.

the monarch was kneeling on the steps of the altar in prayer, the Pope, Leo III., placed a crown upon his head and solemnly saluted him as "Emperor of the West," with the title of Charles I., CÆSAR AUGUSTUS.

71. The latter years of Charlemagne's life were spent in Charlemagne's labors for the consolidation of his empire and energy. the elevation of his people. In activity, in a craving desire to be ever doing something, Charlemagne resembled Napoleon. From the affairs of his own household to the state of the markets, and even to the monasteries in the most distant parts of his empire, he made himself acquainted with everything; and he wearied out all about him by his astonishing powers of invention and labor and the amount of work he exacted from them.

72. Charlemagne was a great patron of learning and learned men. He was himself a good Latin **Scholarship.** scholar, and he knew something of Greek. Wherever he was he was usually surrounded by learned churchmen, whom he drew to his court from all quarters, and with whom he delighted to hold conversations on literary and other subjects. The emperor, his family, and all attached to his household formed what was called the "School of the Palace." Fond of literary pursuits, Charlemagne studied grammar, rhetoric, music, logic, astronomy, and natural history under his learned friends; and even after he was considerably advanced in years he took the pains to acquire the art of writing, — an accomplishment then very unusual except among churchmen.

73. Nor was the emperor's interest in education confined to his own household. Each of the numerous monasteries that he endowed was bound to maintain a school. He had copies of the writings of the ancient Romans made and distributed among the convents, he formed a collection of old German heroic ballads, and under his patronage church music was greatly improved.

74. Physically Charlemagne was of heroic stature and majestic appearance. In his habits he was plain and unostentatious. He dined off four dishes, and was very fond of roast venison, newly killed and served up to him on the spit. He hated drunkenness. At table, books of history and Augustine's "City of God" were often read aloud to him. His love for the national Frankish dress was so strong that he never, save on a few great occasions of state, exchanged it for the Roman garb.

75. Charlemagne's favorite place of residence was at Aix-la-Chapelle' (in German, *Aa'chen*). He made this the northern capital of his empire, as Rome was the southern, and built a magnificent palace there. When his power was confirmed by his coronation as Emperor of the West, all the world hastened to pay him homage. The Saracenic caliph, the famous Haroun-al-Raschid, who ruled the *Eastern* dominion of the Saracens, at Bagdad, exchanged courtesies with his great brother of the West, sending him, among other presents, an ape, an elephant, and a curious clock which struck the hours.

76. Charlemagne died at the age of seventy-two, at Aix-la-Chapelle, in A. D. 814. The year before, he had caused his only living son, Louis, to assume the imperial crown. But the vast structure that Charlemagne had raised during his lifetime tottered and fell almost immediately after his death. Louis, known as the Gentle (*le Débonnaire*), was better fitted for the repose of a cloister than for the government of a warlike kingdom. His sons, among whom he divided the empire, turned their arms first against himself and then against one another. Finally, in A. D. 843, a treaty was made at Verdun', by which France, Germany, and Italy became separate and independent states; so that, in less than thirty years after the death of Charlemagne, the history of THE FRANKS came to an end, and the history of FRANCE and of GERMANY began.

CHAPTER IV.

THE FEUDAL SYSTEM.

77. THE aim of this chapter, and of the succeeding four chapters, is to present a general view of the Middle Ages,—of those great historic facts common to all the nations of Europe during that epoch.

Programme of topics.

FEUDAL CASTLE.

Thus, all the nations of Europe were under that peculiar form of society called feudalism (and this will be treated of in the present chapter); all bore certain relations to the Papal Power (the subject-matter of the next chapter); all participated in the Crusades and in the spirit of Chivalry (the subject-matter of Chapters VI. and VII.); and all passed through the period named the Dark Ages, and shared in the intellectual revival which marked the latter part of the Middle Ages (described in Chapter VIII.).

78. The most marked feature of society in the Middle Ages was Feudalism, or the Feudal System. General state-
ment. This system sprang out of the peculiar relations of man to man among the various Teutonic tribes who obtained possession of the countries that had formed the Western Empire ; by the 11th century it had spread into all the lands to which the German conquests extended ; it continued throughout the whole Middle Ages, and it passed away only with that extensive series of changes that marked the advent of modern history proper.

79. Every free German who had helped his chief in conquering the country received as his share of the Origin of the
system. spoil a particular estate, which was called his *allodium*, or *frechold*,—this estate being absolutely his own property. The chief or king, as a matter of course, received a very large domain as *his* share. Now, after a time, it became usual for him to grant portions of this his own domain to his followers and favorites, on condition of their being faithful to him and doing him service in war. The land so granted was called a *feudum*, or *fief*, and land held in this way was said to be held by a *feudal tenure*. This “tenure,” or way of holding, was totally unlike the property that was *allodial*, or allotted. The latter was a man’s very own ; while land held by the feudal tenure was not the soldier’s property by right, but was retained only during the pleasure of the real owner, and so long as the conditions agreed on were lived up to. The real owner was the *lord*, *suzerain*, or *liege*, while the person to whom he granted the land was called his *vassal*, *liegeman*, or *retainer*.

80. Just as the kings made these feudal grants to their favorites, so the holders of extensive *allods* Growth of the
system. (that is, grants made to them from the first as absolutely their own) gave away portions of these to the less wealthy, to be held by feudal tenure, and thus obtained liegemen or vassals of their own. Bishops and abbots also

gave grants of extensive tracts received from the kings to knights, who held these lands as vassals of the bishops and abbots, — that is, they were bound to defend the monastery and supply a certain number of troops when the king made a general levy.

81. The usual tenure by which vassals held their fiefs was that of military service and homage, — in other words, the proprietors who held fiefs from the king were bound to attend his court on occasions of ceremony, and to assist him, in case of war, with a certain number of men ; and the smaller proprietors, who held fiefs under great lords, were in like manner bound to appear at the castles of their lords, when summoned, and to render them military service. The lord, on the other hand, was bound to protect his vassals.

82. It soon happened that the feudal tenure of property prevailed over every other. The great nobles were but too glad to become vassals of the kings, in return for the rich gifts which they had to bestow ; so also the holder of a small *allod*, or freehold, would often, of his own accord, give it up to a powerful lord in his neighborhood, whose protection he wished to secure, receiving it back from him as a fief. Gradually, therefore, almost the whole property of a country became a connected system of fiefs ; and society, from the king down to the poorest freeman, consisted of a chain of ranks, each retaining from that above it. Kings themselves were vassals of other kings for estates lying out of the boundaries of their own sovereignty. Thus William the Conqueror, monarch of England, was, as Duke of Normandy, a vassal of the king of France.

83. To understand the practical operation of the feudal system, it is best to fancy what took place in a country about to undertake a war. The king summoned his vassals, or retainers, to appear in the field at a certain time, with a certain military retinue ; these vassals,

Duties of a
liegeman.

Feudalism
universal.

Illustration
from war.

generally the chief nobles of the kingdom, made a similar claim upon their retainers or liegemen, the smaller proprietors ; and they, in their turn, summoned the farmers and yeomen who stood to them in the relation of feudal obedience. The army thus consisted of bands of freemen, each armed at his own cost, or at the cost of his feudal superior, and each following the banner of his chief.

84. We have thus far been considering the holders of land ; but in feudal society the great mass of the people were not freeholders at all, but *serfs*. *Serfs.* The serfs were not actual *slaves* ; that is to say, they could not be bought and sold man by man ; but they were bound to the land, and passed with it when *it* changed hands. In addition to the serfs there were also actual slaves, — those who became slaves by being made prisoners of war or by being condemned to slavery for some crime.

85. A fief consisted properly of two things, — the castle in which the lord, or proprietor, lived with his family and men-at-arms ; and the *village*, or *attached domain*, inhabited by the tillers of the soil. These were either *villains* (inhabitants of the *ville* or *village*), who were freeborn men renting land or serving for wages, or serfs, who were the born thralls of the lord of the soil. *Nature of a fief.*

86. Feudalism had spread into all the lands conquered by the Teutonic tribes before it reached England ; and it was first introduced there in its perfection by William of Normandy, when he conquered the country in A. D. 1066. He, as conqueror, claimed the right of giving estates to whomsoever he pleased, on condition of receiving in return military service and aids of money. *The system in England.*

87. As the Normans, on going into England, entered a conquered country, their first thought was to build dwellings for safety ; and to insure this they erected strong castles, and surrounded them with thick walls and a ditch. These buildings usually consisted of *Norman castles.*

three divisions, namely, the inner and outer *courts*, and the *keep*, which formed the baron's residence. The entrance to the castle was guarded by the *barbacan*, which in most cases was a strong gateway in front of the main gate. The passage through the gateway could be closed, in addition to the gates, by a spiked iron grating, called a *port-cullis*, which was let down from above, and the archway was pierced with holes, through which melted lead and boiling pitch could be poured upon an enemy. The gray ruins of many of these castles, found here and there throughout England, give a vivid idea of the massive strength of the homes of the nobility in the feudal times.

88. By many writers feudalism has been painted in romantic colors ; but, in spite of this gilding, it is plain that the system was a bad one. The mass of the people had no guaranteed rights, they were at the mercy of the lords ; and though we may believe that under good proprietors the condition of the people may not have been invariably or necessarily unhappy, yet that system is radically vicious which makes one man subject to the will and caprice of another. Indeed, it is certain that under this system there were monstrous abuses. The feudal barons, withdrawn within their gloomy castles, and surrounded by a dependent and isolated village of serfs and tenants, grievously oppressed the people, who had no redress, seeing that the nobles were the *magistrates* of the fief.

89. At the same time the feudal government retarded the growth of *nationality*. Everything tended to isolation ; a kingdom was a cluster of confederated powers under a common head ; but that head, the king or emperor, lacked real power, since, though the nobles and barons owed feudal allegiance to the suzerain, obedience, when refused, could be enforced only by war. In fact, the system was a reign, not of *law*, but of *lawlessness*.

Evils of feudalism.

Effect on the nation.

90. The three influences that gradually undermined feudalism were: 1. *Royalty*; 2. The *Municipalities*; 3. The *Clergy*. A word regarding each.

Enemies of
feudalism.

91. The increase of the power of *royalty* was directly opposed to feudalism; for just in proportion as the central authority was strengthened, the power of the nobles was weakened. At the outset, in the new Teutonic kingdoms of France, Germany, Italy, Spain, and England, the monarch was to the great nobles merely what these were to their vassals,—the head of a system of fiefs. But very soon the monarchs began to center power in themselves, and then they came into antagonism with feudalism. The reason of this was, that, being head of the whole, the kings were the first to be inspired with the idea of *nationality*. They sought to pierce down through the intermediate ranks of barons, counts, etc., to the real *people* themselves. They thus to some extent put themselves on the side of the lower ranks. At the same time, by issuing decrees to be put in force over the whole kingdom, the throne became the fountain of *law*, as something distinct from the mere *will* of the feudal chiefs.

Influence of
royalty.

92. The second influence mentioned is the rise of the *municipalities*. Under the Roman system there had been numerous free, self-governing cities throughout the empire. Many of these survived the shock of the Teutonic invasions, and formed little republics or self-governing communities in the midst of the feudal society. Moreover, feudalism itself gradually created similar communities. In the turbulence of the times, population tended to crystallize around the castles of feudal chiefs. The lords, finding themselves greatly strengthened by this, began to see that it would be to their advantage to grant the inhabitants certain privileges. Hence arose *towns*, governed by officers—provosts and bailiffs—appointed by the lord, and the still more highly favored

Of the cities.

boroughs, — that is, towns possessing regular charters which conceded them the right of governing themselves by magistrates, such as mayors and aldermen, chosen by the burghers, or free inhabitants. These towns and boroughs were oases of freedom amid the desert of feudal despotism. It was here that there arose that great power in European society, the *Commons*, or free middle class, that in the end not only overthrew feudalism, but tempered the despotism of kings, and brought about *limited, representative* monarchy.

93. The Church, in its efforts to establish absolute dominion in matters spiritual, naturally sought to ally itself with a great centralized power. Hence we find that the clergy usually sided with the kings, and against the nobles. Moreover, the clergy owned more than one half of the entire landed property of most European countries. Finally, the humane sentiments of Christianity, the doctrine of the common brotherhood of man, became a powerful agency in checking the injustice and the arbitrary power of the feudal lords.

94. Among other influences that co-operated towards the destruction of feudalism, were the Crusades, the change of the mode of war following the invention of gunpowder, the extension of commerce, and in general the progress of knowledge.

95. It was a system that was not wholly bad: it must have been in some degree adapted to the times, otherwise it could not have existed at all; but it belonged to a state of society essentially barbarous, and it was overthrown by that very *civilization* which it could not keep from growing up in its very midst.

CHAPTER V.

GROWTH OF THE PAPAL POWER.

96. THE steps by which Christianity became the religion of the Roman Empire have already been traced. We must

Subject
treated of.

PAPAL INSIGNIA.

now see how that mighty organization, the Latin or Catholic Church, arose, and how it became a great power above kings and emperors, holding for centuries a controlling influence over the political affairs of Europe. Some knowledge of the history of the PAPACY, as this dominion of the Latin Church is called, is absolutely necessary to a comprehension of the Middle Ages.

97. On the overthrow of the Western Empire the Bishop of Rome, as the first personage in what had been the capital of the world, was naturally invested with great influence, and looked up to, not only in religious matters, but even in political affairs. Indeed, in the universal wreck, it was the Church alone that kept up the organization of society. The very barbarians who overthrew the Roman Empire were themselves brought under the sway of the Church; for, barbarians though they were, the Teutons had a deep vein of earnestness in their character. Again, the state of affairs in Italy had much to do with giving the Roman bishops great influence. When, under Justinian, the Ostrogoths were overthrown and Italy

Power of the
Bishop of
Rome.

came under the dominion of the Eastern Empire, the representatives of the Byzantine Emperor did not live at Rome, but at Ravenna. This caused the power of the bishops of Rome to grow greater and greater. The Roman bishop, or pontiff,* was called *Pater*, or *Papa*, father (whence English *Pope* †), and he had a vast moral influence, though as yet no temporal power. How temporal power was first acquired will now be told.

98. The Lombards, who in the 8th century had fully established their kingdom in Northern Italy, took every opportunity to enlarge their territory at the expense of the Eastern Empire. They made themselves masters of Ravenna, Rome, etc. But this was not a change that was at all agreeable either to the popes or to the Roman people; hence the aid of Pepin, father of Charlemagne, was asked. Pepin came and saved Rome, and won from the Lombards the territory of the Exarchate of Ravenna. He then took a step that led to mighty results: he bestowed this territory on the popes, and this was the beginning of the temporal power of the Catholic Church. When Charlemagne had overthrown the Lombard kingdom, and was crowned king of Italy and afterwards Emperor of the West (A. D. 800), he confirmed the grant which his father Pepin had made to the popes.

99. After the death of Charlemagne there was a long period — nearly two centuries — of confusion, under the weak rule of the Carlovingian kings of France, Italy, and Germany. During all this time the Papal power grew, and exercised a great authority in politi-

* The name "pontiff" is derived from the *Pontifex maximus*, the chief officer of the old pagan religion of Rome.

† Till the time of Pope Gregory VII., the title of Pope was given to all bishops alike; he, however, in 1076 decreed that thenceforth it should be applied only to the Roman "papa," or pontiff, prefixing at the same time the epithet *sanctus*, whence the modern style, "His Holiness the Pope."

cal matters. When, however, in the middle of the 10th century, the sovereigns of Germany came to be Emperors of the West, a long and bitter struggle between the popes and the emperors began. The Italians did not like to be under German dominion, and the popes became naturally the center round which all the anti-German feeling gathered. The popes, as temporal rulers of Rome, were vassals of the emperor; but as the spiritual head of Christendom, they held a position of peculiar importance.

100. The struggle first broke out on the question of the election of the popes. The emperors claimed that a ratification by them, of any one elected by the College of Cardinals to be Pope, was necessary to make the election valid. Of course, the emperors sought to have popes chosen who were favorable to *their* views. In the first part of the contest the emperors had things much their own way, and undertook to appoint German bishops to the pontificate, and to carry matters with a high hand. But they were to be humbled in a most remarkable manner, by the dauntless energies of one man, a humble monk of Soa'na, son of a poor carpenter of Tus'cany. This was Hil'debrand, afterwards known as Gregory VII., one of the most illustrious men of the Middle Ages.

Narrative of
the quarrel.

101. Hildebrand was called to Rome, in A. D. 1049, by Pope Leo IX., to assist in the Papal councils as chancellor and cardinal. This office he held for twenty years, under five successive popes, over whom he exercised the ascendancy of a great mind. It was during this time that he matured his plan for the complete emancipation of the Church. Believing that the Church supplied the only means by which the regeneration of Europe could be effected, he aimed to set that body above all merely earthly power, — a daring project; but the dreadful evils of the period required a powerful remedy.

Hildebrand.

102. In 1073 Hildebrand rose to the Papal throne, with

the title of Gregory VII. His first measure was to strike a blow at what was called the "right of investiture," claimed by the emperors. This was the right of bestowing on bishops and abbots the ring and staff that were the symbols of their office,—a form which declared their feudal vassalage to the emperor. Now, Gregory caused it to be ordained by a council, that if any one should accept investiture from a layman, both the giver and the receiver should be excommunicated.

GREGORY VII.

103. The Emperor Henry IV. set this decree at defiance. Upon this the Pope solemnly excommunicated the emperor, and *absolved his subjects in Germany and Italy from their oath of allegiance!* Enraged at this, Henry prepared for war. But soon there was brought home to him a vivid realization of the appalling power of that unseen dominion that had arisen to sway the minds of men. In every quarter of his empire monks and friars preached against him, insurrections arose on every hand, and Henry, who entered Italy with the vow of vengeance, was forced to become a humble suitor for mercy at the hands of Gregory. On the 21st of January, 1077, the Emperor Henry proceeded to Canos'sa, where the Pope resided, to seek the pardon of his powerful foe. It was a wonderful scene. The most potent sovereign of Europe had to suffer the deepest humiliation ever brooked by monarch. It was only after the most abject confessions of his error, and standing for three days in an outer court of the castle, amid the cold of winter, barefoot, and clad only in a woolen shirt, that he was absolved, and the dread interdict removed. Henry, however, had his revenge; he re-

newed the war, and Gregory, forced to flee from Rome, died in exile at Salerno (A. D. 1085).

104. The successors of Gregory steadily adhered to his policy, and as the Papacy remained unchanged while all Europe was shaken by revolutions, every day brought fresh accessions to the Papal side. The kings of Portugal, Aragon, England, Scotland, Sardinia, the two Sicilies, and others became vassals to the Roman pontiffs. At length the German Emperor, Henry V., yielded, and by a treaty signed at Worms (A. D. 1122) formally resigned all claim to investitures. Policy of Gregory's successors.

105. Innocent III. (1198-1216) vastly increased the Papal power. He forced the Imperial Prefect at Rome to swear allegiance to him. He set on foot a Crusade that crushed the Albigenses of France. He humbled King John of England, and imposed a tribute upon him. In fact, he claimed to be Sovereign of Europe, — an earthly King of kings. Innocent III.

106. The narrative of how this claim was maintained, and how, on the other hand, it was opposed, fills a large chapter in the history of the Middle Ages. The full recital cannot be given here. It is even hard to say which party won in the end. On this point a great authority observes: "We may perhaps say that the popes did succeed in overthrowing the power of the emperors, but that they had themselves to yield in the end to the power of other temporal princes." Result.

CHAPTER VI.

THE CRUSADES.

I. INTRODUCTION.

107. DURING two hundred years, — comprising the whole of the 12th and the 13th centuries, — the most important events of European history had General statement. relation to that series of extraordinary expeditions known

CRUSADERS BEFORE JERUSALEM.

as the Crusades. This term is derived from the French word *croisade* (*croix*, the cross), which means *war of the cross*. The Crusades were undertaken by the Western nations of Europe for the recovery of the Holy Land from the Saracens and Turks.

108. It had been customary, from an early period in the history of Christianity, for believers from every part of the Christian world to make pilgrimages to the Holy Land of Palestine. Whilst the Saracens remained masters of Palestine they encouraged and protected visitors, whose arrival brought them considerable profit. But when the Selju'kian Turks, in the middle of the 11th century, became masters of Asia Minor and Syria, the Christians, whether residents or pilgrims, were subjected to the most cruel treatment. Every day brought back to Europe weary palmers who had been scoffed at and spit upon by the Infidels, as the Mohammedans were called.

109. The news of the cruelties perpetrated by the Turks on the Christians of Palestine produced a deep feeling of indignation throughout Western Europe, and aroused a strong desire to arrest the progress of the hated religion of Mohammed, and recover the Holy Land from Moslem desecration.

110. This desire was roused into action by the enthusiasm of a monk called Peter the Hermit. This extraordinary man was a native of Amiens, in France. He followed the wars in his youth, then became a monk, afterwards retired to absolute solitude, and finally made a pilgrimage to Jerusalem. There witnessing the cruelties of the Turks, he became possessed with the idea that he was inspired by Heaven to deliver the Holy Sepulcher from their hands.

III. On his return to Europe Peter repaired to the Papal Court, and found in the Pope, Urban II., an astonished but ready listener to his bold project. Encouraged by the Pope, he travelled over Italy and France, everywhere proclaiming the sacred duty of delivering the sepulcher of Christ from the hands of the Infidels. He is described as emaciated by self-inflicted austerities and wayfaring toil, diminutive in stature, mean

in appearance, and clad in those coarse weeds of a solitary from which he derived his surname of the Hermit. But he was fluent in speech, and the vehement sincerity of his feelings supplied him with the only eloquence that would have been intelligible to the popular passions of his times.

112. The chroniclers of the period exhaust language in describing the innumerable crowds of all ranks which thronged cities and hamlets, churches and highways, at his voice ; the tears, the sighs, the indignation excited in these multitudes by his picture of the wrongs of their Christian brethren, and the sacrilegious defilement of the Holy Sepulcher ; the shame and remorse which followed his reproaches at the guilty supineness that had abandoned the blessed scenes of redemption to the insults of Infidels ; the eager reception of his injunctions to every sinner to seek reconciliation with Heaven by devotion to its cause ; and the rapture which his denunciations of vengeance against the Saracen enemies of God awakened in the stern hearts of congregated warriors.

113. The cause was now taken up openly by the Pope, and two councils were held on the subject in A. D. 1095. At the second, held at Clermont, in France, the Pope addressed a great multitude assembled from all parts of Europe. As he proceeded the enthusiasm of the crowd found vent in cries of *Deus vult*, and the slightly varied acclamations of *Dieux el volt* and *Deus lo volt*,*—“It is the will of God !” At the instant when their cries resounded throughout the vast assembly, the figurative injunction of Scripture to the sinner, to take up the cross of Christ, suggested to Urban the idea that all who embraced the sacred enterprise should bear on their shoulder or breast that symbol of salvation. The proposal was eagerly adopted,

* *Dieux el volt* and *Deus lo volt* were the popular corruptions which the pure Latin, *Deus vult*, had undergone in the two great Northern and Provençal dialects of France.

and few there were who left the old market-place on that day without a red cross on the shoulder, to mark them as *Croisés*, or soldiers of the cross. The following spring was appointed as the time for beginning the movement to the East.

2. THE FIRST CRUSADE (A. D. 1096-1099).

114. Long before the season — August the 15th — fixed on by the Pope for the departure of the Crusaders had expired, the impatience of the ruder multitudes of people grew too violent for restraint. Soon after the commencement of the new year an immense concourse of pilgrims, chiefly of the lowest classes, and consisting not of men alone, but also of women and children, had thronged around Peter the Hermit, on the eastern frontiers of France, and urged him, as the original preacher of the sacred enterprise, to assume its command. Apparently unconscious of his utter unfitness for command, the fanatic rashly accepted the perilous charge; and under his guidance, and that of a Burgundian knight named Walter the Penniless, the accumulating torrent began to sweep over Germany.

115. The several bands composing this vanguard of the Crusades, amounting to more than 250,000, took the route through Germany, Hungary, Bulgaria, and Thrace; but being without organization or provision, they committed the most dreadful devastations in the countries through which they passed, and were mostly dispersed and exterminated by the enraged Hungarian peasantry. Remnants of the bands succeeded in crossing the Bosphorus at Constantinople, but these were soon cut to pieces by the Turks. Such was the disastrous beginning of the Crusade, — a quarter of a million of individuals swept out of existence, altogether without result.

116. Meanwhile the real chivalry of Europe had been

mustering for the enterprise. None of the sovereigns took part in the movement; but the feudal chiefs, each at the head of his own vassals, ranged themselves under distinguished leaders, — Godfrey of Bouillon', Duke of Lower Lorraine' (in the modern kingdom of Belgium), Robert, Duke of Normandy, and others. Six separate armies were thus formed, which marched by different routes to Constantinople.

117. The appearance of this vast host — amounting to at least 600,000 men, exclusive of women and priests — alarmed the Greek Emperor with the fear that the Latin princes might seek to secure the mastery of the East for *themselves*, and not for *him*. It was only by the threat of attacking Constantinople that he was made to withdraw his opposition, and further the transit of the Crusaders into Asia Minor. Here all the great divisions of the crusading levies made a junction, and their numbers were increased by the wretched remnants of the preceding mob, who, with Peter the Hermit himself, found their way from various places of refuge to the general muster.

118. The real nerve of the grand army consisted of the mailed cavalry, amounting to over 100,000 men. This superb body of horse was composed of the flower of the European chivalry: knights, esquires, and their attendant men-at-arms, completely equipped with the helmet and shield, the coat and boots of chain and scale armor, the lance and the sword, the battle-ax and the ponderous mace of iron. The crowd of footmen fought principally with the long and cross bow; but they formed a miserable contrast to the splendor of the chivalric array, which glittered in the blazonry of embroidered and ermined surcoats, shields and head-pieces inlaid with gems and gold, and banners and pennons distinguishing the princely and noble rank of chieftains and knights.

119. The first movement of the Crusaders was directed against Nice, or Nicæ'a, in Asia Minor. This place was captured by the Crusaders. In their advance through Asia Minor, a march of 500 miles was still to be made before they could touch the confines of Syria, and the Sultan of Roum was prepared to offer a formidable resistance. With an immense cloud of cavalry — the number is put at 300,000 horse — he hovered around the Crusaders; and at Dorylæ'um he suddenly fell upon one of the two main divisions while on the march. So sudden was the onset, that the victory was at first with the Turks; but rallying, and being reinforced by the other division, the Crusaders fell upon the enemy. In close combat, the supple dexterity of the Asiatics, armed with the curved scimitar and light javelin, could make but a feeble opposition to the ponderous strokes of the European arm wielding the long pointed sword and gigantic lance. In a direct charge the Turkish cavalry was completely overpowered, and of the mighty host 30,000 were slain. This was probably one of the most tremendous cavalry battles ever fought.

120. But what Sol'yman could not accomplish in the field he largely effected in another way. He made the country through which the Crusaders were to march a waste. Hundreds died, on every day's march, of want, of fatigue, of raging thirst or its fatal gratification. The horses in particular died in such numbers that 30,000 men were dismounted on this march, and had to trudge along, fainting with the weight of their armor, under the burning sun. At last they saw, set in the emerald meadows that line the Oron'tes, the fair turrets of the Syrian An'tioch. (See map, page 252.)

121. To lay siege to the capital of Syria was now the task of the Crusaders. But this task was pursued amid great difficulties. For seven

Minor.

Sufferings on
the march.

Siege of Anti-
och.

months the city held out, and during this time the besiegers had to suffer the horrors of famine and pestilence. Their horses were either starved, or killed for food, and ere long, of the 100,000 horses with which the march was begun, only 2000 remained. Finally, by the treachery of a Syrian officer, the Crusaders were able one dark stormy night to surprise and capture the city, June, 1098.

122. No sooner was Antioch captured than the Crusaders were in their turn besieged in that city Events in Antioch. by an army of 200,000 Mohammedans, sent by the Persian sultan. A second and still more terrible famine was suffered. But finally the Crusaders, by a bold sally, completely overthrew the besieging host. The way was now open to Jerusalem, and thither the columns headed, — columns, however, that were sadly reduced ; for of the immense host, perhaps 600,000 men, which had originally formed the siege of Nice, so enormous had been the losses by the sword and the climate, by famine and pestilence, desertion and conquest, that the total force which advanced from Antioch amounted to only 1500 cavalry and 20,000 foot-soldiers, with about an equal number of unarmed pilgrims and camp-followers.

123. From Antioch to Jaffa, 300 miles, the Crusaders moved along the sea-shore. Then they struck To Jerusalem into the interior country, traversing a region filled with places which hourly recalled some sacred association. At last the Holy City burst upon their enraptured gaze. In that glorious sight, the long-cherished object, promise and reward of their hopes, every toil was forgotten, every suffering repaid. The single mighty passion of a host suddenly broke forth in joyful exclamations and embraces ; and the whole armed multitude, as with one impulse, sinking on their knees, prostrated themselves, and poured out their tears over the consecrated soil.

124. The deliverance of the Holy City and Sepulcher

still remained to be accomplished. At this time Jerusalem was in the possession, not of the Turks, but of the Saracenic caliph of Egypt, who was head of an independent government, and had recently won Palestine from the Turks. The caliph was determined to make a stout resistance ; so a siege had to be begun. Under a sky of burning copper, with no water in the pools and brooks, the Crusaders fought for five long weeks before Godfrey and his stormers stood victorious within the walls, July, 1099. The massacre of 70,000 Moslems and the burning of the Jews in their synagogue stained the glory of the conquerors.

125. Jerusalem was now erected into a Christian kingdom. The princely and noble chieftains of the crusading host by their free vote proclaimed Godfrey of Bouillon king of the Holy City, July 23, 1099. Godfrey, however, modestly refused a regal crown, nor would he assume any other title than that of Defender of the Tomb of Christ. Still, from the election of Godfrey of Bouillon may not the less be dated the foundation of the **LATIN KINGDOM OF JERUSALEM**, after the Holy city had been four hundred and fifty years in the hands of the Mohammedans. The great design of the **FIRST CRUSADE** was accomplished.

126. After this victory many of the actors in the great drama went home. Among these was Peter the Hermit, who closed his days in a French monastery. The noble and chivalric Godfrey reigned five days less than a year, when he died at the age of forty. So just and paternal had been his rule, that he was regretted alike by Moslems and Christians. He was succeeded by his brother Baldwin, who transmitted the crown of Jerusalem to his kinsman, Baldwin du Bourg, whose posterity continued to reign in Palestine until the kingdom was overthrown by Saladin in A. D. 1187.

3. SECOND CRUSADE (A. D. 1147-1149).

127. During a period of half a century the Christian dominion in the East maintained itself against the attacks of the surrounding Mohammedans. Situation in the East.

But after the lapse of fifty years dangers began to arise threatening the very existence of the Christian kingdom. One of the Turkish *emirs*, or governors, took the Christian principality of Edes'sa (see map, page 252), and slaughtered the Christian inhabitants (A. D. 1145).

128. The news of the fall of Edessa startled the Christian residents in Palestine, and led them to appeal to Europe for assistance. Effect in Europe. This appeal was received with a general enthusiasm almost equal to that which marked the First Crusade. The pure and devoted St. Bernard preached a new Crusade. Moreover, his eloquence enlisted in the Second Crusade the two foremost sovereigns of the age, — Conrad III., Emperor of Germany, and Louis VII. of France.

129. The armies, numbering 300,000 choice troops, moved in A. D. 1147, and, following the path The march. of the earlier Crusaders, advanced to Constantinople. The Emperor Conrad, preceding his ally, passed the Bosphorus, and marched into Asia Minor. But the Emperor of the East, Man'uel, being an enemy of Conrad's, gave the sultan secret intelligence of the German line of march, and furnished Conrad with treacherous guides. The result was, that, after sustaining a glorious but unsuccessful combat on the banks of the Meander, the German army had to retreat to Nice. Nine tenths of the whole German host are said to have been destroyed by the shafts and scimitars of the Infidels, or to have perished of hunger and thirst.

130. The French, under Louis VII., had meanwhile moved to Nice, and thence, being joined by the remnant of troops under Conrad, the two Advance to Jerusalem.

bodies advanced together through Asia Minor. They suffered a severe check at Laodice'a; but still struggled on, storm-beaten and famine-worn, to Antioch, and finally reached Jerusalem, with a mere fraction of the chivalric army that had left Europe.

131. The first and only undertaking was the siege of Damascus. This was a miserable failure; and
Result. the Second Crusade closed in gloom, with the return of the Crusaders to their own country.

4. THE THIRD CRUSADE (A. D. 1189-1192).

132. Forty years elapsed before the Third Crusade began. In the interval an important revolution had
Saladin. taken place in Mussulman politics. Sallah-adeen, or Saladin, as he is generally called, a young Curdish chieftain, had united the Mussulman states, from the Nile to the Tigris, under his single empire. Meanwhile the Latin kingdom, through internal disorders, was fast falling into a state of weakness. Taking advantage of this fact, Saladin invaded Palestine, took town after town, and lastly Jerusalem, after a siege of fourteen days, A. D. 1187. The only place that remained to the Christians in Palestine was Tyre.

133. The news of the extinction of the kingdom of Jerusalem called forth the Third Crusade. The
Events of Third Crusade. three great Western princes took the cross, — Richard I. of England, known as Richard Cœur de Lion (Lion-hearted); Philip Augustus of France; and Frederick Barbaros'sa (Red-beard), Emperor of Germany. A tax, called Saladin's tithe, was laid upon Christendom, to meet the expenses of the war.

134. While the French and the English monarchs transported their armies to Palestine by sea, the
Frederick's column. high-souled Frederick marched overland with 60,000 cavalry and 100,000 infantry. Fine preparations had

been made, so that the march through Europe and across the Hellespont into Asia Minor was a complete success. Unfortunately, the emperor met his death while bathing in a little stream in Cilicia. The expedition having thus lost its head, everything fell into disorder, and before the Crusaders reached the borders of Syria, their numbers had been reduced to one tenth the original force. The remnant joined the French and English forces before Acre. (Map, p. 252.)

135. The Christians in Syria had in the mean time rallied, and were laying siege to Acre. Now that the chivalry of Europe came to their aid, the siege Siege of Acre. could be prosecuted with much vigor. In vain Saladin attempted to relieve Acre. Numerous battles were fought in the plains around, between the Crusaders and the Moslem myriads; and after a siege of twenty-three months, Acre surrendered to the Christians, A. D. 1191.

136. The capture of Acre was hailed by the Christians as a glad omen of the recovery of the Holy Sepulcher. But these bright hopes were dashed Philip retires. by the retirement of the king of France from the Crusade. The cause of this secession is believed to have been disgust on the part of Philip Augustus at the reckless character and intolerable arrogance of the Lion-hearted, united, perhaps, with some jealousy of the superior glory won by Richard.

137. Richard remained, and continued the struggle for some time with various success; but at last he agreed to a truce with Saladin, the terms of Closing events. which were, on the whole, favorable to the Christians, and creditable to the liberality and tolerance of the Mohammedans.*

* Richard took his departure from the East in October, A. D. 1192; but being detained on the way as a prisoner of the Austrian archduke at Vienna, he did not reach England for nearly two years afterwards. In the mean time Saladin, between whom and Richard there had been established a mutual admiration and regard, died in A. D. 1193. This event gave a new turn to the history of the Holy Land.

5. THE LATER CRUSADES.

138. The three expeditions that have just been described form what we may regard as the Greater Crusades. Several subsequent Crusades — three or four — were undertaken ; but some of these were not directed towards the Holy Land at all, and the others failed of any great results.

Character of
later Crusades.

DETAILS OF THE LATER CRUSADES.

Fourth Crusade. The chiefs of this Crusade were animated more by ambition and a spirit of military adventure than by religious zeal. They purchased the aid of a Venetian fleet by reducing, under the control of Venice, Zara, a Christian city in Dalma'tia (A. D. 1202), and finally, instead of sailing to Palestine, they directed their course to Constantinople, where they overthrew the Greek Empire (A. D. 1204), and established on its ruins a Latin kingdom that lasted till A. D. 1260.

Fifth Crusade. Egypt was the scene of the Fifth Crusade (A. D. 1216–1220). Success attended the first operations of the Christian army ; but finally matters were managed so badly that the army was forced to surrender to the Egyptian sultan. There was what may be regarded as a continuation of this Crusade in A. D. 1228 by Frederick II., Emperor of Germany. He entered Jerusalem in triumph, and compelled the Sultan of Egypt to cede that city and several others to the Christians. But a few years afterwards all that had been gained was swept away.

Sixth Crusade. This expedition, undertaken, in A. D. 1238, by the French under the King of Navarre and by the English chivalry under Richard, Earl of Cornwall, was terminated by negotiation, favorable terms being obtained for the Christians. But peace lasted for only two years, the Latin kingdom being overwhelmed by an invasion of the Turks of Khorasm, who acquired possession of most of Palestine.

Seventh Crusade. This new disaster excited the zeal of the pious Louis IX. of France (known as Saint Louis), who headed the Seventh Crusade, A. D. 1249. It turned out to be utterly fruitless. The king was captured, and had to pay a large ransom for the redemption of himself and his force.

Eighth Crusade. Twenty-one years afterwards (A. D. 1270) Saint Louis undertook what proved to be the Eighth and last Crusade. It

was totally without result. On his way the French king turned aside to besiege Tunis. A pestilential disease broke out in the army, and Louis himself died. Prince Edward of England, who joined with Louis in the Crusade, meanwhile advanced to Palestine; but after a few unimportant operations he was compelled to return home. Soon after this, Acre, the last stronghold of the Christians, was captured, and the Holy Land fell completely into the power of the Mohammedans.

6. RESULTS OF THE CRUSADES.

139. The Crusades utterly failed in their immediate object,—the recovery of the Holy Land from the Mohammedans. Still, the effects of these remarkable expeditions were very important in many ways.

Summary.

140. We may note that the Western nations, having to act in concert, came to know one another better, to interchange chivalrous sentiments, to feel mutual sympathies, and to entertain more liberal ideas.

First effect.

141. Next, it is to be observed that the Crusaders brought from the East the knowledge of many products and processes tending to promote the arts and manufactures; and it was during these expeditions that modern commerce was first developed. The Italian maritime states supplied the Crusaders with transports, and conveyed to them stores and munitions of war. This traffic led to a rapid increase in the commerce and navigation of the Mediterranean; a taste for spices and other articles of Oriental luxury was gradually diffused throughout Europe; and trading depots were formed by Venice, Genoa, and other Italian states, on the shores of the Levant and the coasts of the Greek Empire.

Effect on commerce.

142. Another effect was to diminish the strength of the feudal aristocracy, by occasioning the breaking up and sale of many feudal properties.

Effect on feudalism.

143. Chivalry, though older than the Crusades, derived

its chief influence and strength from these wars. The use of surnames, coats of arms, and distinctive banners became necessary in armies composed of men collected at hazard from every Christian kingdom.

144. The Crusades sprang out of a spirit of fanaticism ; but their result, in the long run, was to quench this very spirit. Instead of the mere feeling of blind abhorrence with which Mohammedans had been at first regarded, many of them had inspired the Christian knights with esteem and admiration. Contact with men of other nationalities had its effect in liberalizing the European hosts ; men returned home with larger ideas and a wider horizon of thought, and we may say that from the time of the Crusades a great intellectual revival began throughout all Europe.

Effect on chivalry.

CHAPTER VII.

CHIVALRY, — ITS RISE AND DECAY.

145. CHIVALRY sprang out of feudalism, and was its brightest flower; it grew into a great institution that for several centuries exercised a General sketch. wonderful influence on the manners, habits, thoughts, and sentiments of men in all the nations of Western Europe; it was brought to maturity and splendor by the Crusades; it was pushed to fantastic extremes, and it ceased to exist when feudal society passed away.

146. Chivalry had its origin in two peculiarities in the customs and instincts of the Gothic races, — Its origin. the great honor paid to the profession of arms, and the high regard and delicate gallantry of the Teutons towards the female sex. When feudalism had become a regular system, — say in the 11th century, — it was the custom for the sons of the various vassals of a lord to form a little court, or school, in his castle, where they were educated under his eye and along with the members of his family in military exercises and feudal etiquette.

147. From the age of seven to fourteen the name given to these boys was *page*, or *varlet*, — in old English ballads, *child*. Pages. The page attended the ladies of the mansion, following them in their walks, or accompanying them when they rode out hawking or hunting. He was thus taught obedience and courtesy, and in addition he was instructed in music, chess, the doctrines of religion, and the use of light weapons. Being constantly surrounded by noble ladies and valiant knights, his earliest impressions were those of gallantry, honor, love, and bravery. Usually each youth selected some accomplished young lady at

whose feet he displayed all his gallantry, and who undertook to polish his manners. "The love of God and the ladies," says Hallam, "was enjoined as a single duty. He who was faithful and true to his mistress was held sure of salvation, in the theology of the castle."

148. At the age of fourteen the page became a *squire*; and just as the page was the attendant of the ladies, so the squire served the men. The squire was employed in various subordinate offices about the castle; but his great duty was to follow his lord to the battle or the tournament, leading the war-horse. When the hour of battle came, he arrayed his master in full armor; he kept behind him in the fight, handed a fresh lance, led in a horse if his lord was dismounted, and dashed to the rescue if he saw him hard pressed. Such were a squire's duties till he reached the age of twenty-one, when he attained the goal of his ambition, — he became a knight (*miles*).

149. The admission to knighthood was attended by an imposing ceremonial. Having fasted and confessed all his sins, the candidate passed a night in prayer and watching. Then, having bathed, he was dressed in new robes, — an underkirtle, a silk or linen vest embroidered with gold, a collar of leather, and over all the coat of arms. Proceeding to the church, he had to pass an examination, and if he was judged worthy of admission to the order of knighthood, he received the sacrament and took the vows, — the vow that he would be a good, brave, loyal, just, generous, and gentle knight, that he would be a champion of the Church and clergy, that he would be a protector of ladies, that he would be a redresser of the wrongs of widows and orphans, etc. Then the baldric — a belt of white leather and gold — was slung round the candidate; his golden spurs were buckled on, and the prince who was to confer the dignity, taking the aspirant's sword, completed the ceremony with a blow of its flat side on the neck.

150. The dress and equipment of the knight varied much at different periods. At the time of the first Crusade, the knights wore chain armor, Dress and armor. formed of interlinked hooks of steel; a hauberk, or tunic of steel rings, hung to the knees; the head was protected by a hood of chain-mail over which was worn a low flat cap of steel; mittens covered the hands, and pointed shoes of mail the feet. The horses were at first unprotected; but afterwards it became customary to sheathe them in complete armor. During the 14th century the chain-mail of the early knights was exchanged for armor formed of overlapping metal plates; and in the heyday of chivalry the knight must have been truly a splendid and romantic figure, mounted on his richly caparisoned steed, glittering in his costly armor of steel, with plume and crest and vizored helmet, with lance and mace and battle-ax.

151. The characteristic amusement of the age of chivalry was the *tournament*, celebrated on occasions of coronations, distinguished victories, Tourneys. royal marriages, etc. The tourneys took place within what were called the lists,—a space roped or railed off in an oval form. The open spaces at each end were filled with stalls and galleries for the ladies and noble spectators. The tilting was generally with lances, on the points of which were fixed pieces of wood called “rockets”; and the great object with each knight was to unhorse his antagonist. When the heralds cried, “*Laissez aller*” (Let them go), off they dashed from opposite ends of the lists and met in the center. When one of the knights had unhorsed his opponent he came forward, amid the blare of martial music, and the shouts of “Honor to the sons of the brave!” from the lips of the minstrels, to receive the prize from his queen or his mistress. From the descriptions of these scenes that we read in the pages of Sir Walter Scott, or of the old chronicler Frois’sart, it is evident that the

tourney must have surpassed every scenic performance of modern times.

152. The question as to the influence of chivalry is one respecting which there have been conflicting opinions. In many respects this influence must have been good and ennobling, for the ideal of chivalry was lofty and pure and generous. Valor, loyalty, courtesy, munificence, and a hatred of injustice formed collectively the character of an accomplished knight. If these virtues were active among men, they could not help bearing beautiful fruits. And there is no doubt they were active, and that some of the noblest characters of the Middle Ages were nursed by the ideas of chivalry. Those ideas softened warfare in a barbarous age, by inculcating humanity and courtesy to enemies; at a time when the obligations of honor were feebly felt, they taught a scrupulous adherence to one's word and to all engagements; and they helped elevate woman to her proper place as the equal and companion of man, by making her the object of chivalrous attention.

153. Still, no institution can radically change human nature; and it is not to be doubted that there were those who were not true knights, that gallantry often degenerated into licentiousness, that a pernicious thirst for military renown was nourished by chivalry, and that the wholesome sense of honor finally degenerated into mere punctilio and fantastic notions, the result of which long lingered in the practice of the duello.

154. The *institution* of chivalry declined with feudalism, of which it was largely a product. The complete change in the mode of warfare effected by the invention of gunpowder, put the knight at great disadvantage. Armor of proof might be forged that would withstand the Swiss broadsword or the ell-long arrows of the English bowmen, but what coat of mail could resist the cannon-ball? Battles were now to be fought chiefly at a distance, no longer hand to hand.

Good side of
chivalry.

Evil side.

Gunpowder,
effect of.

155. Bayard, who fell in France in A. D. 1524, and was known as the chevalier "*sans peur et sans reproche*" (fearless and blameless), was almost the last of the knights of that knightly land. In England, chivalry lasted till the time of Elizabeth, and we cannot help thinking of Sir Philip Sidney as a bright example of the noble knight. In Spain it went out at the same period, amid the inextinguishable laughter excited by Cervantes's burlesque of chivalry in the immortal romance of Don Quixote.

Last of the knights.

156. Still, it is certain that, while the *institution* perished, the *spirit* of chivalry, its finest essence, lived. From the knight of the Middle Ages grew the gentleman of modern days, the elements of each remaining the same. This is a character new in history. Antiquity produced *heroes*, but not *gentlemen*; so it may be said we owe the noblest human type the world has ever seen, — that type of man in which are richly blended a sense of personal honor, generosity, courtesy, and Christian tenderness and helpfulness, — to the same influences which shaped chivalry in the period of the Middle Ages.

Permanent effect of chivalry.

His bones are dust,
His good sword rust:
His soul is with the saints we trust.

CHAPTER VIII.

CIVILIZATION IN THE MIDDLE AGES.

I. THE DARK AGES.

157. OF the long period of a thousand years comprised in the limits of the Middle Ages, — from the close of the 5th to the close of the 15th century, — the first six centuries, from the close of the 5th to the close of the 11th century, are nearly barren of interest, and the term “Dark Ages” is appropriately used to designate these centuries.

158. It is a strange and melancholy spectacle to see civilization, after attaining so considerable a height in the Roman Empire, fall back into barbarism. This relapse has sometimes been laid to the door of the barbarous races that overthrew the Empire; but it was not due wholly to this influence. For two or three centuries before the structure of Roman civilization finally fell, the foundations were undergoing gradual but irretrievable decay; and the edifice would have come to the ground of itself, even had no barbarian hand assailed it. In the latter ages of the Roman Empire we find a general indifference towards the cultivation of letters. As a natural result, original and powerful works ceased to be produced. The final settlement of the uncultured Teutonic nations in Gaul, Spain, and Italy completed the ruin of literature. They despised learning themselves; and the native Roman and Latinized inhabitants of those countries soon sank to the level of the barbarians.

159. A main cause of this loss of culture was a change that was at this time going on in the languages spoken by the people of Western Europe. In

the two or three centuries succeeding the Teutonic conquests there was a gradual breaking up of the structure of the Latin speech as spoken in Italy, Spain, and Gaul. The Teutonic conquerors, in order to communicate with the people in these countries, had to learn Latin, but in learning it they still further corrupted it. Thus the common language of those lands was a sort of broken Latin, which was called *Roman*, while classical Latin was still written by scholars. The process of change went further, however, differences of dialect arose in the several countries, and *Roman* developed into Italian, French, and Spanish.

160. When Latin had ceased to be a living language, the whole treasury of knowledge was locked up from the people. Those who might have imbibed a taste for culture if books had been open to them were left destitute. All books were in Latin, which they did not understand, while in the language they did understand there were no books. To be sure, a knowledge of Latin did not *wholly* die out. It was still taught in schools; but these schools were confined to cathedrals and monasteries, and designed solely for religious education, so that the people in general had no opportunity for learning.

161. The worst effect was, that, as the newly formed languages were hardly made use of in writing, — Latin being still the official language of public documents, legal papers, etc., — the very *use of letters*, as well as of books, was nearly forgotten. It was rare for a layman, of whatever rank, to know how to sign his name. The charters were inscribed with the mark of the cross. In this state of things, whatever learning existed was in the keeping of the clergy; but, according to the records of the Church and of the councils, this was far from extensive.

162. A chief cause of this general ignorance was the scarcity of books. The art of making paper from cotton rags was not introduced till about

Result of
change.

Use of letters.

Scarcity of
books.

the close of the 11th century. Previous to this the two kinds of writing material were papyrus and parchment. But after the conquest of Alexandria by the Saracens in the 7th century, papyrus almost ceased to be imported into Europe; while parchment was too costly to be readily spared for book purposes.*

163. During the five centuries of the Dark Ages, we find but few names of really eminent men. Bede, **Eminent men.** the Englishman, known as the "Venerable Bede" (born about A. D. 673), and Alcuin, another Englishman, already mentioned as the teacher and friend of Charlemagne, were men rather of learning than of genius. John, surnamed Sco'tus or Erige'na, a native of Ireland, belonging to the 9th century, and Pope Sylvester, who lived in the 10th century, were the two really original thinkers during this long period. The former was a bold and acute reasoner, the latter an excellent mathematician.

164. These centuries have been called the Ages of Faith; but they were quite as much ages of superstition. **Superstition.** A curious illustration of the wild fancies that took possession of men's minds in these times of ignorance was a general belief, which arose in the 10th century, that the world would come to an end in the year 1000 A. D. Many charters begin with these words, "As the world is now drawing to its close." Another superstition was the notion that the guilt or innocence of a person could be determined by what was called the *ordeal*. These ordeals, or trials, consisted of handling hot iron, walking over red-hot plowshares, plunging the arm into boiling fluids, etc. If the person was innocent, no harm, it was said, came to him.

* From this dearth of parchment a curious practice arose: the monks in the monasteries would erase a manuscript, and write another on the same skin. Such writings are known as *palimpsests* (twice written). This practice occasioned the loss of many ancient authors, as the legend of a saint would often take the place of a work of the classic age.

Even a man as enlightened as Charlemagne was a warm advocate of the ordeal.

165. It is not wonderful that in this state of affairs the human intellect became enfeebled, that morals were corrupted, and that society in general sank to a low level. Agriculture was in a miserably backward condition. There is not a vestige to be discovered for several centuries of any considerable manufacture. Everything had to be made on the place, and even kings, in the 9th century, had their clothes made by the women upon their farms. To traffic there were great obstacles; for in the lawless state of society a merchant ran constant risk of being robbed, while in the domains of every feudal lord a toll was to be paid in passing his bridge, or along his highway, or at his market. In Germany especially unscrupulous robbery was practiced by the great, who, from their gloomy and inaccessible castles, issued forth to harry the land and spread terror over the country.

166. If it be asked how it happened that a few sparks of ancient learning survived throughout this long winter, we can ascribe their preservation only to Christianity. The Church was the bridge across the chaos, and linked the two periods of ancient and modern civilization. We cannot fairly rate the knowledge of the clergy high during the Dark Ages; but, such as it was, clerical culture alone kept Europe from lapsing into intellectual barbarism.

167. In the good work of the Church the most active agents were the monks. Monachism, or the practice of retiring to a solitary and contemplative life, took its rise in the East. At first monks were generally laymen, but in time they all belonged to the priestly order, and came under certain vows.

168. The monastic system was introduced into Western Europe early in the history of the Christian Church; but it received its perfect form in the

Picture of the age.

6th century, at the hands of St. Ben'edict, an Italian, who established the first monastery on Mount Cassi'no, in Lower

MONASTERY GATE.

Italy. He was thus the founder of the widely spread order of Benedictines, which rapidly extended itself among all nations, and built many monasteries. The rule of this order included the novel feature of industrial occupation. Agriculture was especially recommended ; and in the Middle Ages the Benedictine monks were the best husbandmen in Europe. The monas-

teries—erected for the most part in beautiful and remote situations, and the inhabitants of which were obliged to take the three vows of celibacy, personal poverty, and obedience—proved, in those days of lawlessness and barbarism, a blessing to mankind. They converted heaths and forests into flourishing farms ; they afforded a place of refuge (asylum) to the persecuted and oppressed ; they ennobled the rude minds of men by the preaching of the gospel ; they preserved the remains of ancient literature from utter destruction, and were the nurseries of education and of learning.

2. THE AGE OF REVIVAL.—CITIES AND COMMERCE.

169. From the state of degradation and poverty described in the last section all the European nations grad

ually recovered, — some slowly, others more rapidly. The commencement of this restoration may be dated from about the close of the 11th century. We cannot apply the term “Dark Ages” to the period between the 11th and the 15th centuries, — for at this time we see the shadows grow fainter as we advance, till finally the twilight reddens into our modern dawn.

170. One of the first signs of advancing civilization, and also one of the great agencies of further progress, was the growing up of *Towns* to a position of prime importance. Cities are always the centers of civilization. In the old Greek and Roman times the towns had, so to speak, been everything. But the Goths, Franks, and other Teutonic invaders were not used to cities, and even those that had arisen in Central Europe, under Roman influence, declined very much after the German settlement, and lost much of their importance and local freedom. However, as civilization began to revive, new towns arose, especially in Germany and Italy, and the old towns won back something of their former greatness.*

171. The real importance of these German towns is to be dated from their famous union in what is called the *Hanseatic League*. This was a con-

General statement.

Growth of towns.

Hanse cities.

* In Germany, till the reign of Charlemagne, at the close of the 8th century, there were no towns except a few that had been erected on the Rhine and Danube by the Romans. During the next three hundred years, however, we find many cities arising. At the commencement of the 12th century, Henry V. conceded certain privileges to the free cities, and especially to their artisans, and these gave a soul to industry. The first town erected on the coasts of the Baltic was Lubeck (A.D. 1140). In the 13th century it became independent of any sovereign but the German Emperor. Ham'burg was originally a castle (Ham'maburg) built by Charlemagne for defense against the Norsemen. It purchased independence of its bishop in 1225. Bremen dates from about this period. A colony from Bremen founded Riga in the 12th century; Dant'zic arose in the following century.

federation, made about the middle of the 13th century, of eighty of the most considerable German cities. The union was suggested by the need of mutual defense against piracy by sea, pillage by land, and the exactions of the nobles. It was of the greatest importance both to commerce and to freedom.

172. In Italy, the cities rose to greatness even earlier than in Germany. This was particularly the case in Northern Italy, that is, Lombardy. There from the 11th century the towns became everything. Though nominally under the dominion of the German emperors, they gradually grew strong, while the power of the emperors declined. What is called the *Lombard League* was formed in 1167; and the peace of Constance, in 1183, secured the independence of the cities. The great city-republics of Venice, Gen'oa, etc., date from this period.

173. With the growth of the towns, industries of various kinds began to spring up, and trade and commerce to spread and flourish. One of the earliest industries was the woolen manufacture of Flanders. This had grown to great importance in the 12th century, and the "Flemish stuffs" were sold wherever the sea or a navigable river permitted them to be carried. Ghent and Bru'ges were the chief seats of this industry, and the weavers of these cities were distinguished for their democratic spirit.

174. In England, commerce, for two centuries after the Norman conquest, — middle of the 11th to the middle of the 13th century, — was almost confined to the export of wool, then the great staple of that country. But in the next century Edward III., the father of English commerce, introduced the finer manufacture of woolen cloths, by bringing large numbers of artisans from Flanders. From about the middle of the 14th century

we find continual evidence of a rapid increase in wealth, and at this period, for the first time in English history, the occupation of a merchant began to be recognized as honorable.

175. The commerce of the South of Europe was through the city-republics of Venice, Amal'fi, Pi'sa, and Genoa. It was chiefly with the Saracenic countries before the first Crusade ; but the Crusades themselves led immediately to the growing prosperity of the commercial cities of Southern Europe, and opened an extensive trade with the Levant'. In Southern France, Marseilles', Nismes, and Montpel'ier, and in Spain, Barcelo'na, had a flourishing commerce. Italian commerce.

176. The earliest impulse to manufacturing industry in Italy was given by the introduction of a silk manufacture at Paler'mo by Roger Guiscard, in Silk manufacture.

1148. Silk became very soon a staple manufacture of the Lombard and Tuscan republics, and the cultivation of mulberries was enforced by their laws. The same industry soon spread into Southern France and Catalo'nia (in Spain), where it flourished greatly.

177. The needs of an enlarging commerce eventually led to the organization of moneyed institutions. By most people in the Middle Ages lending money for profit was treated as a crime. The trade, in fact, was at first entirely in the hands of the Jews, who were long the objects of cruel persecution, being maltreated and swindled to an almost incredible extent. The Jews and money.

178. In the 13th century the trade in money was taken up by the merchants of Lombardy and of the South of France, who began the business of remitting money on bills of exchange, and of making profits on loans. In spite of much prejudice the Lombard "usurers," as they were called, established themselves in all the chief commercial centers of Europe, and, as the practical The Lombard bankers.

utility of their business was found very great, good sense finally overcame ancient prejudices.*

179. The growing wealth of Europe led to a considerable diffusion of comforts among the people.
Comforts. This is proved by the enactment, in the 14th century, of what are called "sumptuary laws," — that is, laws designed to restrict men in regard to what they shall eat, wear, etc.

180. It may also be noticed that at this same period the houses people lived in began to be of a better sort, though for several centuries after this they were what we should regard as very indifferent habitations. Still, it is something that at this time chimneys and window-glass were introduced. Chimneys were wholly unknown to the ancients, who had to let the smoke escape through an opening in the roof. They came into use in the 14th century, as did also window-glass. The internal accommodations were, however, yet very imperfect. Even in gentlemen's houses, the second story (where there was one) was approached from the outside, the walls were bare, without wainscot or plaster, and it is hardly necessary to say that neither pictures nor libraries were to be found in them.

3. LITERATURE, SCIENCE, AND ART.

181. The low condition to which the European mind had sunk in the Dark Ages, as regards everything relating to literature and science, has been spoken of in a previous chapter. One of the earliest signs of the reviving spirit was the establishment of universities.
Universities.

* The earliest bank of deposit is said to have been that of Barcelona, founded 1401. The bank of Genoa was established in 1407, and soon grew to be a great power.

The University of Paris first became famous, at the beginning of the 12th century, under the teachings of Ab'elard, a man of bold and brilliant genius. The University of Oxford in England is said to have been founded by King Alfred (9th century), but it was not really a flourishing seat of learning till the 11th century. In the year A. D. 1201 it contained 3,000 scholars. In the 12th century we find the University of Bologn'a with a roll of 10,000 students, while the University of Paris, in the 15th century, numbered 25,000 students. Cambridge was founded in the 13th century. The earliest German university was that of Prague, founded in 1350. Other famous mediæval schools of learning were Pad'ua, Toulouse, Montpellier, and Salaman'ca.

182. The chief attraction that drew the crowds of students to the universities, after a long season of utter indifference to learning, was the rise of the new Scholastic philosophy. "scholastic philosophy" in the 11th and 12th centuries. The chief feature of this was the application of the art of dialectics to subtle questions of metaphysics and theology.

183. The great masters of this art are known collectively as the Schoolmen; and it attained its highest perfection, in the 13th century, in the persons The schoolmen. of Thomas Aquin'as and Duns Scotus. Other famous schoolmen were Roscelin, Anselm, and Peter Lombard.

184. Many of the questions which the schoolmen discussed with great interest now seem very frivolous,—as, for instance, the question as to Nature and effect of the philosophy. "how many angels can stand on the point of a needle," and whether "an angel in passing from one point to another passes through intermediate space." But, in spite of some frivolities of this kind, there is no doubt that the scholastic philosophy developed acute intellects, and prepared the way for the fruitful inquiries of the 16th and 17th centuries.

185. While the schoolmen were devoting themselves to subtle points of theology and metaphysics, a few minds were beginning to investigate mathematical and scientific questions. Scientists. Among the greatest of these may be mentioned Roger Bacon, an English monk,

and Albertus Magnus, both of whom lived in the 13th century. For the times in which they lived these men made wonderful advances in true knowledge; and each had to pay the penalty of being in advance of his age, for both Bacon and Albertus were punished as magicians.

186. One of the most interesting chapters in the intellectual history of Europe during the Middle Ages is that of the Arabian contributions to science. The Saracens instituted universities, observatories, public libraries, and museums; they collected together all the remains of Greek and Alexandrine learning, and through their medium the greater number of Greek and Latin authors which were read during the Middle Ages were known to Europe. It may also be noted that a noble order of architecture, of which the Alhambra presents us a fine specimen, was created by them.

Saracenic
learning.

COURT OF LIONS, ALHAMBRA.

187. In the 10th century we hear of Spain, under the Saracens, as a center of learning; and it is there that we must look for the origin of several sciences that have commonly been attributed to other nations. It is from them that we received our mode of notation, called the Arabic figures; and the terms "algebra," "alcohol," "alchemy," "zenith," "nadir," etc., all of which are Arabic, attest the influence of that remarkable people on the science of the Middle Ages. It is well known that to the researches of the Saracenic alchemists we owe the beginnings of chemistry, — a science which the Arabians cultivated with success; and the first work on the subject with which we are acquainted was written by Yeber-Abou-Moussah-Djafer-al-Sofi, whom we call Geber, an Arab of the 8th century.

188. It must be remembered that all the writings of the churchmen were in Latin. But literature, to become a real national power, must come from the people. Hence it is of importance to know when a *native* literature began to spring up in the various European nations. We may say, in a general way, that there began to be works written in the new *Romance* tongues, — the Italian, French, Spanish, — and also in the German, about the time of the Crusades and immediately thereafter. It was at this time that the Troubadours and Minnesingers arose to celebrate the deeds of knights, battles, adventures, and love. The German collection known as the *Nibelungen Lied*, the Spanish romance of the *Cid*, and the cycle of poetry relating to the British Arthur and his Knights of the Round Table, are among the most famous collections of the heroic poetry of the Middle Ages.

189. These earlier preludings were in the 13th and 14th centuries followed by some true outbursts of the highest form of poetry, — the real beginnings of our modern literature. In the 13th century we

Saracenic
schools in
Spain.

Growth of na-
tive literature.

Dante and
Chaucer.

have in Italy, Dante (born A. D. 1265), whose *Divina Commedia* is one of the great world-books ; and in the 14th century our own English Chaucer (born A. D. 1328), who is still accounted one of England's five greatest poets.

190. The characteristic art of the Middle Ages was architecture, — especially the building of cathedrals. The Gothic cathedral is the highest expression of the blended faith and genius of that age. The 11th century was a time of great splendor in building churches. They were, however, still built in the *round-arched*, or what is called *Romanesque*, style.

191. The use of the *pointed* arch and what is called the Gothic style did not come in till near the end of the 12th century. Originating in Northern France, the Gothic style of sacred architecture soon spread over all Europe, and during the 13th and 14th centuries it attained its highest perfection. Many of the grandest edifices occupied from one to two centuries in building. With their heaven-piercing spires, their noble arches, their elaborate sculptures and traceries, and their great mullioned windows, on whose “storied panes” the whole history of the Bible is written in the hues of the rainbow by the earnest hand of faith, they remain to this day the most sublime structures ever reared by the hand of man.

192. We have said that architecture was *the* characteristic art of the Middle Ages. Painting, though it began in that period, did not reach full development till the 16th and 17th centuries, while music belongs to a date still closer to our own times.

CHAPTER IX.

POLITICAL OUTLINE.

FROM CHARLEMAGNE TO THE CLOSE OF THE MIDDLE AGES.

I. THE GERMAN EMPIRE.

193. WHEN Charlemagne died (A. D. 814), he was succeeded by his son Louis, who divided the Frankish dominion between his three sons. Division of Charlemagne's Empire. They quarreled violently, but the Treaty of Verdun (A. D. 843) confirmed the partition. Thus out of Charlemagne's Empire grew three states,—Germany, France, and Italy. But neither of these countries remained long under the rule of the descendants of Charlemagne.

194. The Carlovingians ruled in Germany for less than a century after Charlemagne's death. During this time the chief power was in the hands of certain great dukes, and when the last of the German Carlovingians died (A. D. 911), five of these got together and chose Duke Conrad of Franconia to be king; so that Germany became an elective kingdom. Germany under the Carlovingians.

195. On the death of Conrad the Saxons and Francians united in placing Henry, a Saxon (called Henry I., or the Fowler), on the throne (A. D. 919); and he was the first of a series of five Saxon emperors who ruled Germany for more than a century, and raised it to be the greatest power in Europe. First line of emperors.

196. Henry was succeeded by his son Otho the Great (A. D. 936), under whom took place a very important event, namely, the revival of the Western Empire under the title of the "Holy Roman Empire of the German nation." This took place when Revival of the Western Empire.

Otho married Adelaide, widow of Lothaire, the last Carolingian king of Italy: receiving the iron crown of Lombardy, he united Upper Italy with the German kingdom. Otho was consecrated emperor by the Pope in A. D. 962. From this time every German emperor continued to receive a triple coronation, — as King of Germany, as King of Italy, as Emperor of the West. The “Empire” was after a time little more than a fiction, but it was a fiction that had a great influence on political affairs throughout the Middle Ages. The Saxon dynasty went on in three descendants of Otho, till A. D. 1024, when a line of Franconian emperors begins.

197. The Franconian line of emperors lasted for a century and a year. The first was Conrad II., A. D. 1024. The chief event of his reign was that the *Kingdom of Burgundy* was united to the Empire. Conrad’s son, Henry III. (A. D. 1039), was one of the greatest of all the emperors. It was in his time that the Empire came to have a great deal to do with the election of the popes, for Henry III. took this matter into his own hands. Under the next emperor, Henry IV. (A. D. 1056), the troubles between the popes and the emperors grew to a great height, and we have seen that Pope Gregory VII. forced Henry IV. to beg his pardon. Henry V. had nearly the same disputes with the popes. As this emperor had no son, the Franconian line ended A. D. 1125.

198. After Lothaire of Saxony had held the imperial crown for twelve years, it passed to one of the greatest families that ever held it, that of the *Hohenstaufen*, or Dukes of Suabia. The first of this line was Conrad III., who reigned as king of Germany, but who was never crowned emperor. Frederick Barbarossa, his nephew, was elected to succeed him, and he was crowned emperor A. D. 1155. The greater part of his reign was taken up with a struggle with the Lombard

Franconian
emperors.

Events under
the Suabian
emperors.

cities of Northern Italy, which claimed to be independent. The cities triumphed in the end, and by the Peace of Constance, A. D. 1183, acquired the right to govern themselves. Under Frederick's successor, Henry VI., the kingdom of Sicily was conquered, and united with the Empire. Thus under the next emperor, Frederick II., were joined together the crowns of Germany, Italy, and Sicily.

199. A period of confusion followed the death of Frederick II. (A. D. 1254), but finally Rudolf I. The Empire under the Hapsburgs. was chosen King of Germany, and with him began a new line of rulers, the *House of Hapsburg*, or of Austria. Rudolf was never crowned emperor, and indeed his successors, though they were still called *Emperors of the Romans*, were really very little more than kings of Germany. Even in Germany their authority was always growing less, while the princes in Germany greatly enlarged their own powers. Then followed other kings on whom we need not dwell, till we come to Sig'ismund, who was crowned emperor. He was already Margrave of Bran'denburg and King of Hungary, which fact might make it appear strange that he should be chosen emperor; but the Empire by itself was growing so weak that the electors thought it best to choose some powerful prince who had possessions outside of Germany. With Albert II. came in the Austrian branch of the Hapsburg line, and for many centuries, though the emperors were still always elected, yet the electors always chose a member of the House of Austria. The long reign of Frederick III. (A. D. 1440 - 1493), the second of this house, carries us through the Middle Ages.

2. FRANCE.

200. The real beginning of what we understand by France was in the 10th century. When Gaul Real beginning of France. was conquered by the Franks, it became a

part of the kingdom of the Franks ; while under Charlemagne it was a part of *his* extensive Empire.

201. After the partition of Charlemagne's Empire by the treaty of Verdun, the Carlovingian line went on ruling in France ; but they were feeble kings, and the powerful Dukes of Francia, Burgundy, Normandy, etc., were really independent sovereigns. The Carlovingian line came to an end with Louis the Sluggard ; and then in the confusion one of the great dukes, Hugh Capet [*cap-ay'*], Duke of *Francia*, made himself king by right of manhood. Thus the *Duke of Francia* became *King of France*, and this was the real beginning of the kingdom of FRANCE, A. D. 987.

202. During the imbecile rule of the Carlovingians, the northern coast of France was invaded by Scandinavian bands named Norsemen. These were rude-handed pirates and sea-rovers ; their galleys were painted to represent dragons, their banners bore

NORSE GALLEY.

the figure of a raven ; they were worshipers of Thor and Woden, and delighted in blood. Under Rollo they appeared in the Seine (A. D. 901), and made themselves so formidable that Charles the Simple granted them the

Province thenceforward called *Normandy*. In France the Norsemen became Christianized, and their name was softened down to *Normans*.

203. The Capetian line of French kings continued for nearly three centuries and a half, and comprised fifteen kings whose names and dates are given in the note below for convenience of reference.*

204. The first of this line, as has been seen, was Hugh Capet. His descendants for many generations were, however, kings of France hardly more than in name; for their vassals, the great dukes and counts, held the real authority.

205. During the reign of the third king, Henry I., Duke William was ruling over the Duchy of Normandy. William laid claim to the crown of England, and he invaded and conquered that land A. D. 1066. As after this the Norman King of England was Duke of Normandy, England and France were brought into sharp rivalry, and a great part of the history of France during the Middle Ages is taken up with the hostilities between the two countries.

206. In 1154 Henry II. of England began to rule. He married Eleanor, the divorced wife of Louis VII. of France. As she was heiress of the French Province of Aquitaine, the English king held really greater possessions in France than did the French king himself.

207. This state of affairs was altered by Philip II. (Philip Augustus), who wrested from the English king,

John, Normandy, Maine, and other possessions in Northern France. The recovery of these added greatly to the strength of France; and the wise rule of Louis IX. (Saint Louis) gave her increased importance. Indeed, France at this time began to be a great nation, and she was henceforth reckoned amongst the foremost powers of Europe.

208. The last of the Capetian dynasty, Charles IV., died in 1328, leaving no male issue. The crown now passed to his cousin, Philip of Valois, with whom begins the House of Valois.* This dynasty ruled for more than two and a half centuries, and ended with the assassination of Henry III. (A. D. 1589).

209. At the commencement of the Valois period of French history, Edward III. was King of England. As his mother was a sister of the late French king, Charles IV., and that king had left no son, Edward of England thought he should have the crown of France, and accordingly he fitted out a great armament by sea and land to wrest that crown from Philip of Valois (Philip VI.). There thus began a great war, called in French history the *Hundred Years' War*.

210. The most famous events in this series of wars are:—

1. Battle of Crecy (A. D. 1346): English victory.
2. Battle of Poitiers (A. D. 1356): English victory. [This first part of the war was ended by the *Peace of Bretigny* (A. D. 1360), by which the English king, Edward, gave up his claim to the crown of France; but he kept his possessions in Aquitaine, together with Calais', and that no longer as a vassal, but as an independent king.]

Charles VII.,	1422				

3. Conquest of Aquitaine by the French. The French king, Charles V., broke the Peace of Bretigny, and wrested from the English nearly all of Aquitaine except the cities of Bordeaux' and Bayonne'.
4. Renewal of the war by the English. Henry V. of England took advantage of the dissensions by which France was torn in pieces during the reign of the mad French king Charles VI. The great action was the
5. Battle of Agincourt (A. D. 1415): English victory.
[By a treaty of peace (A. D. 1420) it was agreed that the English king, Henry V., should succeed to the crown of France on the death of the mad king Charles VI., and that the two crowns were to be ever after united.]
6. Refusal of the French to acknowledge the treaty after the death of both Charles and Henry in A. D. 1422. The war was now carried on by the French king Charles VII.
7. Uprising of France, under the inspiration of the famous Maid of Orleans, Joan of Arc. By the enthusiasm which she excited, the French gained several victories over the English, and finally, by A. D. 1453, the latter were entirely driven from France, retaining only the town of Calais. This closed the Hundred Years' War.

211. On the whole, notwithstanding the long war with England, the kingdom of France grew greatly in power and extent in the times between the middle of the 13th century and the middle of the 15th century. And, regarding the history of France during the Middle Ages as closing with Louis XI. (A. D. 1483), we may say that the French nation was then the most powerful in Europe.

State of the
French nation.

3. ENGLAND.

212. The history of Anglo-Saxon England has been traced up to the epoch of Charlemagne, when the various petty kingdoms were all united under King Egbert, at the beginning of the 9th century.

Review.

213. The supremacy of Egbert was soon interrupted by the Danes, or Norsemen, and both he and his successors were very greatly disturbed by them.

Troubles with
the Danes.

Alfred the Great was a grandson of Egbert, and became King of Wessex in A. D. 872. He was almost constantly employed in fighting the Danes. But all he could do did not prevent them making a lodgement in England; and a century after Alfred's death England was quite won by them, for the Dane Canute wore the English crown (A. D. 1017-1036), as did his successors till A. D. 1041.

214. The Norman conquest of England, under William the Conqueror (A. D. 1066), the facts of which Effect of Norman conquest. have been related (under France), was the next great event in the history of England. By this event the English nation was thoroughly subjugated. The Normans, who came over in crowds, were the ruling class. They had all the great offices. The Church and the law courts were directed by them. The official language was that spoken by the conquerors, that is, Norman-French, which was a Romance, or Latin-sprung, speech.

215. The Saxons, however, were of tough mettle. They Persistence of Saxons. held their own well, for in fact they were still the great majority of the people. What is very important, also, they clung to their native Anglo-Saxon language. The effect on the language was peculiar. For a long time the two tongues did not coalesce. Anglo-Saxon remained the speech of the common people, while French was the official and the *fashionable* language. In two hundred years but few Norman words had been brought into the ordinary speech; but meanwhile the Anglo-Saxon began to drop most of its peculiar grammatical forms. Then, when Saxon had been stripped down to semi-Saxon, there came about in the 14th century a remarkable rushing together of the languages. Thousands of Norman-French words were introduced into the common dialect, and the result was the type of English which we may read in Chaucer,* who lived in the 14th century.

* As in the *Canterbury Tales*.

216. To resume our outline of the dynastic history of England. The Norman line was composed of the following sovereigns : —

The Norman
kings.

William I., A. D. 1066–1087.

William II. (Rufus), A. D. 1087–1100. — Henry I., A. D. 1100–1135.

Stephen, A. D. 1135–1154.

217. William II. was the second surviving son, and Henry I. the youngest son, of William the Conqueror. Stephen was the son of the Count of Blois and Adela, fourth daughter of William the Conqueror.

Lineage of
the kings.

218. With Henry II., son of Geoffrey *Plantagenet* and Matilda, daughter of Henry I., began the Plantagenet line of sovereigns.

The Plantage-
nets.

Henry II. (A. D. 1154–1189).

Richard I. (A. D. 1189–1199).

John (A. D. 1199–1216).

Henry III. (A. D. 1216–1272).

Edward I. (A. D. 1272–1307).

Edward II. (A. D. 1307–1327).

Edward III. (A. D. 1327–1377).

Richard II. (A. D. 1377–1399).

219. During the reign of the wicked and foolish King John, the French won back Normandy, and on the whole it was a very good thing for England that they did so. Says Macaulay: “John was driven from Normandy. The Norman nobles were compelled to make their election between the island and the continent. Shut up by the sea with the people whom they had hitherto oppressed and despised, they gradually came to regard England as their country, and the English as their countrymen.

Result of the
English de-
feats.

The two races, so long hostile, soon found that they had common interests and common enemies."

220. It was in the 13th century that the *Constitution of England* began to put on the shape which it has kept ever since. The first step was when the English people in A. D. 1215 forced King John to grant the Great Charter (*Magna Charta*), by which all the old rights and good laws which he had broken were confirmed. It has been the groundwork of English freedom ever since.

221. The next step in freedom was one of even greater importance. This was the establishment of Parliament. Parliament in the form of an Assembly with Two Houses. It came about in this way. The king, Henry III., John's son, had behaved badly. The great nobles, with Sir Simon Montfort, banded against the king, defeated him in the field, and made him captive. Then Sir Simon issued writs which added to the old assembly of lords, clergy, and knights *two burgesses* from each borough (A. D. 1264). This was the commencement of the English House of Commons and of true representative government. It was a wonderful step in advance.

222. The wars waged with the French had the effect of developing in the English people a strong sentiment of nationality. It may be said that by this time all distinction of Norman and Saxon had ceased, and that there were only *Englishmen*.

223. With the deposition by Parliament of Richard II., in A. D. 1399, the Plantagenet line went out. Three kings of the House of Lancaster now followed: Henry IV. (A. D. 1399-1413); Henry V. (A. D. 1413-1422); Henry VI. (A. D. 1422-1461).

224. In A. D. 1455 there broke out the great civil strife known as the Wars of the Roses (the *red* rose, symbol of Lancaster, and the *white* rose, symbol of York), the contending parties being the respective

representatives of the families of Lancaster and of York, both of which were claimants to the throne. Six years of war resulted in the accession of Edward IV., of the family of York.

225. The House of York included three kings: Edward IV. (A. D. 1461–1483); Edward V. (A. D. 1483–1483); Richard III. (A. D. 1483–1485). House of York.

The twenty-four years' reign of these three kings was filled with troubles and intrigues, and these continued till A. D. 1485, when a Lancastrian earl, son of Edward Tudor, came to the throne as Henry VII. With him the Tudor line of English sovereigns begins, and English mediæval history ends.

4. ITALY.

226. When the extensive Empire of Charlemagne was parceled out by the treaty of Verdun (A. D. 843), Changes in Italy. the Italian possession (comprising all of Lom-

THE LION OF ST. MARK.

bardy) fell to Lothaire, one of the grandsons of Charlemagne. Under the German Emperor Otho these were, as has been seen, absorbed in the "Holy Roman Empire."

227. But this did not bring Her condition. quietude

to Italy; for the emperors and the popes were continually quarreling, and Italy was inevitably drawn into the struggles between the Guelphs and the Ghibellines. The Ghibellines were the friends of the emperors; the Guelphs, with whom the popes generally sided, upheld the cause of the

Italian people, who were constantly striving to rend the links that bound them to the German Empire.

228. In the latter half of the 12th century Frederick Barbarossa attempted to strip the Italian towns of their dearly prized liberties. This resulted in the League of Lombardy in A. D. 1167, when twenty-three Italian cities united to claim, among other privileges, the right of electing their own magistrates and making their own laws. By granting charters and working on local jealousies, Frederick contrived to muster in opposition a league of Ghibelline cities. For nine years war wasted Northern Italy, until the decisive Battle of Legna'no was fought in A. D. 1176. Seven years later, by the Peace of Constance, the Emperor acknowledged the right of the republics to govern themselves.

229. The most illustrious of the Italian republics were Venice and Florence.

230. The glory of Venice began with the Crusades. Her position, favorable for commerce, had already led to ship-building on a large scale; and the hire of vessels to carry the Crusaders to Palestine filled her coffers with gold. Her ships brought back from Syria the silks and spices and jewels of the East. The same course led to the rapid rise of her rival, Genoa, on the opposite shore of Italy. With her commerce her manufactures also thrived, — the silks and the glass made at Venice being especially prized.

231. The territory of Venice spread at an early day round the northern shore of the Gulf. Istria and Dalmatia became hers. During the Fourth Crusade she gained the Ionian Islands, the Morea, and Candia; and later she extended her sway through Lombardy as far as the Adda. Cyprus was conquered by her in A. D. 1480.

232. In A. D. 1172 the appointment of the Doge, or Duke,

and other magistrates was vested in a grand council of four hundred and eighty members. Change after Political changes. change took place, until a Council of Ten secured the government to themselves. Under this unchecked oligarchy a reign of terror began.

233. In the mean time the power of the state was decaying. The League of Cambray was formed against the island-city in A. D. 1508 by the Decay. Pope, the Emperor, and the kings of France and Spain, and she suffered a defeat from which she never fully recovered.

234. The strength of Florence lay in the commercial spirit of the citizens. They wove in silk and wool, made jewelry, and especially followed Florence. the occupation of bankers. Their gold *florin*, first coined in A. D. 1252, became the standard currency of Europe. In A. D. 1250 the citizens, revolting against the rule of the Ghibelline nobles, established a magistracy styled the *Sig-noria*. Long and tedious feuds distracted Florence; but in spite of these she grew rich.

235. In the course of these troubles a family of merchants named the Medicis [*med'e-chee*] rose to The Medicis. great influence in Florentine politics; and finally one of these, named Lorenzo de Medici, raised him-

LORENZO DE MEDICI.

self to be the head of the state. His splendid patronage of art and literature gained for Lorenzo the name of the Magnificent. He turned his gardens at Florence into an Academy, he enriched the public library with many hundreds of manuscripts collected in Italy and the East, and by his patronage of artists made Florence the scene of some

of the most brilliant triumphs ever won by brush or chisel.

236. When Charles VIII. of France, crossing the Alps, invaded Italy, Florence was rudely despoiled. **Later events.** The Medicis were then banished from Florence; but they were restored in A. D. 1512. The republic, however, did not long endure. Its extinction dates from A. D. 1537, when Cosmo I. was proclaimed Duke of Florence. In A. D. 1569 he was created by the Pope Grand Duke of Tuscany. But this carries us beyond the period of the Middle Ages, and we shall return to Italy under Modern History.

5. SPAIN.

237. It has already been seen that Spain was overwhelmed by a Saracenic deluge in the early part of the 8th century. The Christian kingdom was almost utterly crushed. However, after a time the Mohammedan dominions were split up among a num-

ber of petty sovereigns, and the Christians began gradually to conquer back what had been lost.

238. The kingdom of Navarre was founded in A. D. 873, the kingdom of Aragon in A. D. 1035, the kingdom of Castile in A. D. 1026. Leon and Asturias were added in A. D. 1037, and Ferdinand of Leon and Castile added Cor'dova, Toledo, and Sev'ille between A. D. 1234 and A. D. 1248.

239. The *Kingdom of Spain* was formed by the union of Castile and Aragon, by the marriage of Ferdinand and Isabella, and in A. D. 1491, Granada, the last of the Mohammedan possessions, was wrested from the Moors by Ferdinand and Isabella. In the long campaign against the Moors the court moved with the army, and Columbus, who was then soliciting the aid of the Spanish sovereigns in his great enterprise, moved with it. It is an interesting fact that the formal arrangement, or *capitulations*, between Isabella and Columbus is dated from the "Vega (or *plain*) of Granada" three days after the surrender of the last stronghold of the Moors.

ANALYTIC SYNOPSIS FOR REVIEW.

Fifth Century.	The latter part of this century is filled with the events attending the dissolution of the Western Roman Empire. The series of emperors in the West comes to an end, and the Visigoths reign in Italy. Meanwhile the Goths, Franks, and other Teutonic nations press into the Empire, and out of their settlements the Romance nations of Europe arise. At the same time the Angles and Saxons are settling in Britain and laying the foundations of the English nation.	PROGRESS OF CIVILIZATION.
		Introduction of Christianity into France.

Sixth Century.	In the sixth century the Franks establish themselves as the dominant race, and under Clovis, A. D. 510, found a kingdom of the Franks that embraced parts of what we now call France and Germany. Clovis is succeeded by other kings of the Merovingian line. In the Byzantine Empire Justinian reigns in the first half of the century. Under him the Ostrogoths are driven out of Italy, and a good part of the peninsula is united with the Eastern Empire, as is also the Vandal kingdom in Africa. But in the latter half of this century the Lombards pour into Italy and conquer the whole northern part, leaving to the Eastern Empire only some parts of Central Italy — the Exarchate of Ravenna — and of the southern section. The Lombards establish the kingdom of Lombardy, embracing the valley of the Po.	Silk-worms brought to Europe.
		Roman law codified under Justinian.
		Introduction of Christianity into England.
		Latin disused in Italy.
Seventh Century.	The first half of the seventh century is marked by the rise of Mohammedanism, and by the first great Saracenic conquests (Hegira, A. D. 622). Under the Caliphs the Saracens wrench from the Eastern Empire a great part of its Oriental dominion. North Africa also is conquered. But Constantinople successfully withstands the Saracenic assaults. In Italy and the land of the Franks matters remain much as at the close of the previous century. England is Christianized; but it is not yet <i>England</i>, — being divided among seven or eight petty sovereignties called the <i>Heptarchy</i>.	Pens made from quills.
		Glass manufactured in England.
		Alexandrian Library destroyed.
		Greek fire invented.
		Koran published.

**Eighth
Century.**

In the early part of the eighth century the Saracens cross into Spain, which falls almost wholly into their hands. They also attempt to push their conquests beyond the Pyrenees, but are met at Tours by Charles Martel and defeated. The Frankish kings sink into mere nonentities. The real rulers are the Mayors of the Palace; and one of these, Pepin, deposes the last Merovingian, and becomes the founder of the Carolingian line. Under Pepin's son, Charlemagne, the Frankish dominion is greatly extended; Northern Italy is conquered from the Lombards, and on Christmas day, A. D. 800, Charlemagne is crowned Emperor of the West. Pepin lays the foundation of the temporal power of the popes by the gift of the Exarchate of Ravenna

Paper made from cotton.

Carpets introduced.

Schools of learning founded by the Saracens.

Greek works of science translated into Arabic.

**Ninth
Century.**

In the early part of the ninth century the various petty sovereignties in England are all united into one kingdom under Egbert; and the brilliant period of Alfred comes in the latter half of this century. In Spain the Saracenic power declines, and the Christian kingdoms of Navarre and Leon are founded. Under the successors of Charlemagne the Empire is broken up into the three kingdoms of France, Germany, and Italy; but it is a period of great confusion and many changes in these countries, owing to the fact that the feudal barons assume the power of sovereign princes in various parts of the Empire.

Clocks brought to Western Europe.

Oxford University founded.

Agriculture and horticulture encouraged in Germany.

A navy first organized by Alfred the Great.

Tenth
Century.

In the early part of the tenth century the Norsemen become prominent, and under Rollo they make a landing at the mouth of the Seine, and become so formidable that the French king cedes to them the province of Normandy. They also (as Danes) assert their power in England and maintain a footing there. At the same time Germany passes entirely away from the Carolingians, and under new sovereigns begins to grow great. Otho, the German king, is crowned emperor; so that most of Italy is now part of the Empire. In France, towards the end of the century, the imbecile Carolingian dynasty comes to an end; Hugh Capet, the Duke of Francia, is crowned king, and the French monarchy now really begins.

Arabic notation introduced into Europe.

Wine-presses first introduced into Italy.

Cambridge University founded.

Eleventh
Century.

During the eleventh century the German Empire is the foremost power in Europe. The popes also have risen to great influence in temporal affairs, and a good part of this century is marked by a great and prolonged struggle between the popes and the emperors. In the latter half of the century Hildebrand (Gregory VII.) is Pope; he asserts the power of the Church over all temporal sovereigns, and compels the Emperor Henry IV. humbly to sue for pardon. The Norman conquest of England takes place during the latter half of this century,—A. D. 1066. The kingdom of Castile is greatly enlarged at the expense of the Mohammedans. Towards the end of the century the Crusades begin.

Musical notes invented.

Windmills first used.

Clocks with wheels introduced.

Beginnings of native literature in the Romance tongues.

Twelfth
Century.

During this century much is done towards bringing the various powers of Europe into something like the state in which they are now. The Italian cities assert their independence, the power of the German Empire comes pretty well to an end, and Germany and Italy begin to be collections of separate states, independent or nearly so. The Crusades go on at intervals during this century. Chivalry becomes a great institution. The Italian republics rise to great wealth and glory. It is also a season of general intellectual awakening, and Europe has completely emerged from the Dark Ages.

Cultivation of the sugar-cane introduced into Sicily.

Glass windows used in England.

Introduction of the scholastic philosophy by Abelard, Peter Lombard, and others.

Thirteenth
Century.

The Crusades continue during the thirteenth century, but in a feebler way, and finally cease in the latter half. In England Normans and English are fully reconciled; the English kings, losing the greater part of their dominions in France, are forced to become national sovereigns; the rights of the people are asserted in *Magna Charta*, and the establishment of the House of Commons. In Germany the Empire is upheld by Frederick II. (King also of Sicily), thus joining together in himself three crowns; but he has continual strivings with various popes. In Spain, the Saracens and Moors are left with nothing but Granada. This is also a period of general intellectual improvement. The universities are established, and this is the age of the Minnesingers of Germany and of Gothic church-architecture.

Spectacles invented.

Glass mirrors used.

Clocks to strike made in Europe.

Science cultivated by Roger Bacon and Albertus Magnus.

Marco Polo journeyed into Eastern Asia.

Fourteenth Century.

During a good part of this century England and France are engaged in war. France, in consequence of the English invasions of Edward III., is nearly conquered; but she gains in the end. These wars exercise a great influence in uniting the English into one nation. The English language takes on to a good degree its modern form: it is now really English, not Anglo-Saxon or Semi-Saxon. In Italy learning revives; but the republics lose most of their freedom. Spain is gradually becoming a great power. Norway, Denmark, and Sweden are joined by the Union of Calmar.

Mariner's compass introduced into Europe.

Paper made from linen rags.

Gunpowder and cannon used in war.

Pins invented.

Beginnings of English literature, — Chaucer.

New Testament translated by Wycliffe.

Fifteenth Century.

In the course of this century we get fairly beyond the Middle Ages. The feudal form of society has been gradually undermined, and strong national monarchies have arisen in the various European countries. The Eastern Empire comes to an end, being overthrown by the Turks in the middle of this century. Spain becomes one great nation by the union of Aragon and Castile. The application of the mariner's compass leads to distant sea voyages, — new lands are opened up. Gunpowder changes the art of war, and printing makes an intellectual revolution.

Invention of the art of printing.

Greek philosophers seek refuge in Italy.

Algebra borrowed from the Arabs.

Discovery of America.

Passage round Cape of Good Hope discovered.

SECTION V.

MODERN HISTORY.

FROM THE BEGINNING OF THE 16TH CENTURY TO THE PRESENT TIME.

CHAPTER I.

TRANSITION TO MODERN HISTORY.

I. INTRODUCTION.

I. It is difficult to fix upon a precise date at which to say Mediæval History ended and Modern History began ; for, as a great author declares, "The horologe of Time does not peal out the passage from one era to another." And indeed this difficulty is shown

When does
mediæval
history end ?

FIRST PRINTING-PRESS.

VASCO DA GAMA.

by the different dates selected by different historians as the proper close of the Middle Ages. Some place it at the date of the capture of Constantinople by the Turks, when the Eastern Roman Empire came to an end. But

this was far from being an event of marked importance for Europe in general. Others place it at the date of the discovery of America. But this event, great though it was, was merely one event in a series of maritime discoveries. Others, again, place it at the close of the 15th century. But this is purely arbitrary.

2. In place of marking one single date as the close of the old and the commencement of the new era, it will be wiser to regard the period included between the latter part of the 15th and the early part of the 16th century as a *Period of Transition*, in passing through which it may fairly be said that we cross the bridge from mediæval to modern history.

3. This period will embrace several marked events and revolutions in affairs: as, the destruction of the Eastern Empire; the era of maritime discovery, including the discovery of America and the circumnavigation of Africa; the invention of printing and the revival of learning; the invention of gunpowder, with consequent changes in the art of war and in the organization of society; the decline of feudalism and the establishment of centralized monarchies.

2. FALL OF THE EASTERN EMPIRE.

4. In the middle of the 15th century Constantine Palæologus was the ruler over the Byzantine Empire; but this empire was reduced almost to the limits of the city of Constantinople,—for to such a pass had the great dominion of Constantine been brought by the vice and folly of its rulers, the fury of theological controversy, and the corruption of its citizens. Thus sunk in hopeless decay, it was to fall before the power of the Ottoman Turks.

5. The power of the Ottoman Turks commenced in

Asia Minor, and was laid by Othman, or Ottoman (born 1258), who, originally ruler of a small mountain district forming the frontier of ancient Bithynia and Phrygia, gradually extended his dominion till it became one of the most flourishing states of Asia Minor. The advance of the Ottoman dynasty after this was rapid. Not only did nearly all Asia Minor fall under Turkish sway, but in the 14th century the Turks crossed the Hellespont, made Adrianople their capital, and reaching out from there gradually stripped the Byzantine emperors of Thrace, Macedon, Servia, and Southern Greece. At length Mohammed II. ascended the Ottoman throne (1451), and, from the moment of his accession, directed his efforts to the capture of Constantinople.

6. At the head of an army of 300,000 men, supported by a powerful fleet, he laid siege to the celebrated metropolis. Constantine Palæologus met the storm valiantly, and for fifty-three days made a stout defense of the city. At last, on the 29th of May,

History of
the Ottoman
Turks.

Siege of Con-
stantinople.

USE OF GUNPOWDER AT THE SIEGE OF CONSTANTINOPLE.

1453, the Turks stormed the walls, having previously battered them with cannon (then used for perhaps the first

time); Constantine fell, sword in hand, boldly disputing every inch of ground; multitudes of his subjects were massacred; the Crescent waved over the church of St. Sophia, and the Byzantine Empire fell forever.

3. MARITIME DISCOVERIES.

7. We have now to take a survey of the maritime discoveries of the 15th century, and the consequent changes in trade and commerce. The accompanying map presents to the eye the world as

we now know it, with the world as known to Europeans

previous to the discovery of America and the circumnavigation of Africa. From this it will appear that, during the whole of what we call ancient history and the Middle Ages, the historic stage was limited to Europe, a small part of Western Asia, and a narrow strip of Northern Africa. We are now to learn how these limits were prodigiously enlarged in consequence of the great discoveries that mark the latter half of the 15th century.

8. A knowledge of the properties of the magnet was a necessary antecedent of distant ocean voyages and the discovery of unknown lands. The Invention of the compass. invention of the compass has commonly been attributed to an Italian named Gioja [*jó'yǎ*], who flourished about the beginning of the 14th century ; but erroneously, for the instrument was known, even in Europe, nearly two centuries before this time. It was then, however, in a very rudimentary state, being merely a needle rubbed on a loadstone and floating on a cork, or other light substance, in a vessel filled with water, — a method used long before by the Chinese. The really important question is, When was the compass practically applied in navigation? This does not seem to have been done till about the beginning of the 15th century.

9. It was the Portuguese who, under the patronage of Prince Henry of Portugal, took the lead in maritime discovery. Retiring to the promontory of St. Vincent, this enlightened prince established himself at the seaport town of Sa'gres, where he built an observatory and gathered around him from all quarters men skilled in astronomy and navigation. With these he discussed bold projects of maritime enterprise ; and the point to which he especially directed his attention was the practicability of sailing round Africa and of thus reaching the East Indies. Prince Henry of Portugal.

10. The southernmost cape of Africa known in those

days was Cape Non, which received this appellation from the idea that it was utterly impossible to get beyond this cape. But the officers of Henry, having at length doubled it, found Cape Bojador [*bozh-ä-dor'*]; and this awful cape being passed by, the region of the tropics was penetrated, and divested of its fancied terrors; the river Sen'egal was observed, the greater part of the African coast, from Cape Blanco to Cape de Verde, was explored, and the Cape de Verde and the Azore Islands were discovered. Before the death of Prince Henry, in 1463, Portuguese discovery had been pushed to within five degrees of the equator.

11. The passion for discovery languished after the death of Prince Henry; but it was revived with additional ardor by his grand-nephew, King John II. (1481). In his reign the Portuguese for the first time crossed the equator and beheld the stars of a new hemisphere: in 1484 a Portuguese fleet sailed fifteen hundred miles south of the equator, settlements were made on the coast of Guinea, and a regular commerce was established.

12. The Portuguese now began to conceive the possibility of reaching India by a southern navigation around Africa. In 1487 Bartholomew Di'az sailed far enough south not only to descry, but to double, the *Cabo Tormentoso*, or Cape of Storms; and as the coast was ascertained to run towards the north-east, the prospect of success seemed now so clear that the king renamed this cape *Cabo de Boa Esperança*, or Cape of Good Hope. The "good hope" was realized by Vasco da Gama, who, having doubled the southern point of Africa, arrived at Cal'icut, in Mal'abar, in May, 1498. A sea-route to India was thus opened up.

13. The desire of reaching India by sea was the inspiring motive of a voyage that resulted in a still more brilliant discovery, namely, the discovery of America by Columbus.

14. Columbus's love of enterprise was no doubt stimulated by the maritime discoveries of the Portuguese ; and it has been recently proved that Aim of Columbus. he conceived his grand project soon after his arrival in Portugal. This project, as is well known, was by no means that of finding a new continent, but of seeking a passage to India, the land of gold and spices. He knew that the Portuguese were bending their efforts to reach India by the circumnavigation of Africa ; and his grand inspiration was that India might more readily be attained by sailing westward across the Atlantic.

15. The success of the Portuguese in India, though not so brilliant, was scarcely less important than Portuguese in the East Indies. that of the Spaniards in America. Albuquerque conquered Goa (1511), and made it the capital of the Portuguese establishments in the East. But the Portuguese generally abstained from territorial acquisition ; they contented themselves with commercial establishments along the coast, whence they exported from India direct the articles which the Venetians had formerly supplied to Europe through Egypt and the Levant.

16. The circumnavigation of Africa made a complete revolution in the commercial condition of Effect of sea-route to India on trade. Europe : the trade which had been confined to the Mediterranean now traversed the Atlantic, and the Western nations hastened to share in its gains. With characteristic indolence, the Portuguese carried the Indian produce no farther than Lisbon, where it was sold to foreign merchants for transmission to other countries. The Dutch engaged very eagerly in this carrying-trade, and found it so lucrative that they took the earliest opportunity of excluding the Portuguese themselves from all share in their commerce by depriving them of their colonies.

17. England was not altogether without a share in these great maritime discoveries. In 1497, under the auspices

of Henry VII., Sebastian Cabot, a native of Bristol, and
 Part taken by one of the three sons of John Cabot, a Venetian
 the English. merchant settled in that city, sailed around the
 northern coast of Labrador, touched at a point supposed to
 have been either New'foundland or Cape Breton', and sailed
 to the south along the coast of what is now the United
 States as far as latitude 38° . His enterprise led to no im-
 mediate advantage, though the discoveries of Cabot are of
 interest as having been the foundation of the English claims
 to dominion in North America.

18. The growth of commerce in this age was very rapid,
 Circumnavi- but there appeared to be still room for further
 gation of the discoveries, until the globe was circumnavi-
 globe. gated by the ships of Magel'an (1519-1521). From that
 time the attention of nations began to be directed more to
 completing old discoveries than to the search for new lands.
 The navies of Europe commenced to assume a formidable
 aspect ; manufactures multiplied, and states previously poor
 became suddenly rich. Sovereigns and governments began
 to direct their attention to commerce, justly persuaded that
 mercantile wealth is the source as well of the prosperity as
 of the glory of nations.

4. THE REVIVAL OF LEARNING.

19. While the European mind, in the 15th century, was
 Circumstances thus astir with the spirit of discovery, there
 attending the took place that remarkable intellectual awak-
 revival of ening styled the Revival of Learning. We
 learning. have already seen that this movement had begun in the
 latter part of the Middle Ages. Long before the fall of
 Constantinople the love of classical literature had been
 gradually reviving ;—that event increased it by compelling
 a great number of learned Greeks to seek shelter in Italy,
 and other parts of Western Europe, carrying with them

their treasures of classic lore. There now began among scholars a most ardent search for buried and neglected manuscripts, and their diligence was rewarded by the discovery of many precious monuments of the Greek and Roman literature. The labors of these scholars were mainly instrumental in producing that state of things which turned men's minds towards the invention of printing, and nourished it to maturity when invented.

20. It is rather singular, in connection with the history of printing, so aptly termed the "art preservative of all the arts," that while it records the birth of other inventions, no positive record exists of its own. A controversy has arisen, concerning the origin of the art, between the three towns of Harlem, Mentz, and Strasburg; each, from a natural partiality, attributing it to her own citizens. The dispute, however, has turned rather on words than facts, and it seems to have arisen from the different definitions of the word *printing*. If the invention of the *principle* be made the criterion, the honor is unquestionably due to Laurence Coster, a native of Harlem, who first found out the method of impressing characters on paper by means of carved blocks of wood. If movable types be considered as the criterion, the merit of the discovery is due to John Gu'tenberg of Mentz; while Schoeffer [*shef'er*], in conjunction with Faust, was the first who founded types of metal.

21. In regard to the earliest books printed, the following facts are of interest:—

1423. Year of the earliest dated print. This is known as the "St. Christopher" print, — a single engraved page with a few lines of *engraved* letters.

1438. Letters separately cut in wood about this date.

1450. Letters separately cast in metal about this date.

1455. Bible in Latin. This earliest complete printed book known is called the *Mazarin Bible*, from having been found in the collection of Cardinal Mazarin. It is supposed to have been issued from the press of Gutenberg and Faust at Mentz, about 1455.

1457. Psalter in Latin; printed at Mentz by Gutenberg and Faust,—first book printed with a *date*.
 1460. Bible in Latin and German: earliest example of a book printed on both sides of the leaf with metal types.
 1474. First book printed in England by Caxton. Its title is "The Game and Playe of the Chesse."

5. DECLINE OF FEUDALISM.

22. At the close of the 15th and commencement of the 16th century, the power of the great European vassals had been shaken, but not annihilated. In France feudalism had received a severe blow at the hands of Louis XI.; yet it still in some degree survived; it threatened to rise again during the civil wars of France, and was not completely extinguished till the time of Richelieu.

23. So also in Spain, though much abated, it remained to be put down by the policy of the Emperor Charles V., and his successor Philip II. In England the great vassals of the crown had never been so powerful as on the Continent; and hence in the time of John they had been obliged to league themselves with the people in defense of their common rights. The great Earl of Warwick in the reign of Edward IV., and the Duke of Buckingham in that of Richard III., are among the last remarkable instances of formidable power in the nobles. The greater part of them perished in the Wars of the Roses.

24. Among the chief agents in the destruction of feudalism were the invention of gunpowder and the consequent change in the art of war; for neither the armor of the knights nor the thick walls of their castles were proof against bullets and cannon-balls.

25. Although it is universally conceded that gunpowder was invented by Roger Bacon, the English monk, in the 13th century, it was long before the invention was applied to the art of war. This applica-

tion has been claimed for Berthold Schwartz, a German apothecary, about 1330; but gunpowder appears to have been used in war by the Moors before that period.

6. RISE OF GREAT MONARCHIES.

26. The most striking fact in the political aspect of Europe at the commencement of modern history is the appearance of a series of great centralized monarchies, which in the period of transition arose upon the ruins of the Feudal States. Great feature of the period.

27. Despotism could not exist in the time of feudalism, on account of the resistance of the nobility; but when the great vassals were overthrown, the kings gradually contrived to get all power into their own hands. And thus, strange to say, the condition of affairs at the beginning of the modern period, though in some respects a going forward, was in other respects a falling back from the state of affairs in the Middle Ages. It was a time when laws could be more regularly carried out, when much of the turbulence and disorder of the feudal period came to an end. But it was also a time when political freedom retrograded, when the great states became absolute monarchies under sovereigns whose will was law. Cause of royal despotism.

28. These monarchs wielded the sword of the state, and this sword was the Standing Army, a thing new in European history. In the feudal ages, when, in order to make war, the sovereign had to call on his liegemen, there was always this limitation of the king's power, that the great vassals might not obey. But an army of soldiers kept constantly under the king's pay was a tremendous weapon which he could wield at will; and it was by means of this weapon that the kings in most parts of Europe overthrew the free institutions that had arisen in the Middle Ages. Effect of standing armies.

29. The people surrendered these liberties without heed ;
 Surrender of for such was the spirit of the age, that men
 liberties. had come to think the sovereign and the state
 one, and patriotism meant simply loyalty to the king. This
 was a devotion not without its noble aspect, but it was fatal
 to the people ; and we shall see that liberties surrendered
 thus lightly had afterwards to be reclaimed with terrible
 throes.

30. The absolute power which the great sovereigns had
 Nature of the acquired enabled them to wage wars for their
 wars waged. own purposes,—wars in which the nations
 that they governed had very little interest, and which were
 designed merely for the aggrandizement of particular royal
 families. Thus, though the most valuable part of history
 is that which concerns the people themselves, and not
 that which has to do with kings and courts, it happens
 that at this period we cannot pass over the latter in silence,
 because the relations, hostile or otherwise, of great princes
 form really the most salient facts in the history of the 16th
 and 17th centuries.

31. The understanding of this state of affairs will help
 Balance of the student to a knowledge of what is meant
 Power. by the *balance of power*,—of which we read
 a great deal in modern European history. For when the
 strength of nations thus became centralized in the hands
 of a few monarchs, it was not unlikely that one of these
 might through his own power, aided by family connections,
 gain a great and dangerous preponderance over the others.
 Now the aim of the policy named the balance of power was
 to attain such a just distribution of force, either by alliance
 or internal resources between the different states, that no
 one should overshadow the others. This led to exceed-
 ingly complicated international relations, and the combina-
 tion of nations thus formed is often spoken of as the “States-
 System of Europe.”

CHAPTER II.

GREAT EVENTS OF THE SIXTEENTH CENTURY.

TOPICS....	{	Age of Charles V.
		England under Henry VIII.
		Rise of the Dutch Republic.
		Civil and Religious Wars of France.
		Age of Elizabeth.

I. AGE OF CHARLES V.

32. It is the brilliant figure of Spain that first attracts our attention at the beginning of modern history; and indeed we may fairly say that during most of the 16th century Spain was the greatest power in Europe. For a long time during the Middle Ages Spain lay obscurely between the ocean and the Pyrenees, and carried on wars and policies which were limited by its territorial bounds. Indeed, we can hardly say that at this time Spain was a nation at all; for the peninsula was parceled out between a number of small independent kingdoms, while the Moors, though their power had been greatly circumscribed, still held firm foothold in Grenada. But the marriage of Ferdinand of Aragon with Isabella of Castile united the two most powerful states. Then these sovereigns entered upon a vigorous campaign against the Moors, and the year 1491 saw the fall of Grenada. In 1512 Ferdinand conquered nearly all the kingdom of Navarre, —so that the whole peninsula except Portugal was thus joined together; and the year 1516 saw the supreme power over all united Spain descend on the head of the grandson of Ferdinand and Isabella. Now this grandson was the character known in history as the Emperor Charles V.

33. Charles V. was born at Ghent in the year 1500.

Position of
Charles V.

He was the son of Philip, Archduke of Austria (son of Maximilian, Emperor of Germany), and of Joanna (daughter of Ferdinand and Isabella of Spain). At the age of fifteen he assumed the government of Flanders, which came to him through his paternal grandmother, Mary of Burgundy. In the following year, 1516, the death of his maternal grandfather, Ferdinand, placed on his head the brilliant crown of Spain, and as Don Carlos I. he ruled jointly with his mother, Joanna, who, however, was insane. The Spanish dominion at this time included not only Spain, but Naples, Sicily, Sardinia, and those vast possessions beyond the Atlantic with which the genius of the Genoese navigator had dowered the Castilian Crown. Three years after this, in 1519, the death of his paternal grandfather (the Emperor Maximilian) transferred to him the sovereignty of Austria and of the other hereditary possessions of the House of Hapsburg.

34. The death of Maximilian transferred to Charles

He is chosen
Emperor.

Maximilian's *hereditary* possessions, but not the imperial crown; for in these times the Emperor of Germany was *elected* by the *Electors*, or great princes of the various German states. Accordingly, on the death of Maximilian, in 1519, it became the duty of these Electors to choose an emperor of Germany. Charles's most formidable competitor was Francis I. of France, though for a while young Henry VIII. of England sought the glittering prize. Charles was chosen; so that now Don Carlos I. of Spain became the Emperor Charles V., and as such he was crowned with the diadem of Charlemagne at Aix-la-Chapelle, in the year 1520. He was but twenty years old, yet he ruled a dominion more extensive than that which had obeyed the sway of Alexander or of Augustus.

35. The two great events of the reign of the Emperor

Charles V. are : 1. The rise of Protestantism ; 2. The wars carried on under the lead of Francis I. of France against Charles V., to maintain the balance of power.

Two chief events of the reign.

36. At the beginning of the 16th century all the nations of Western Europe were in communion with the Roman Catholic Church. It is true that from time to time, during the latter half of the Middle Ages, there had been religious discontents among particular men. Thus in the 12th century there arose in the South of France a sect called the Albigenses, who agreed in considering the authority claimed by the popes in spiritual matters, as well as the discipline and ceremonies of the Roman Church, erroneous and unlawful. Very similar opinions were proclaimed in England in the 14th century by Wycliffe, and in the next century by Huss in Bohemia. But these revolts against the See of Rome had been partial and temporary, and they were all put down, though not till many persons were burnt as heretics.

Position of the Catholic Church.

37. It happened, however, very soon after the beginning of the 16th century, that great controversies on matters of religion arose. There was complaint at many practical abuses in the Church, and at the claims of the popes to interfere in the affairs of nations ; and there was also a growing feeling among many that not a few of the doctrines which were believed, and of the ceremonies which were practiced, in the Church, were contrary to Scripture.

Beginnings of dissent.

38. It was in this state of affairs that there arose a dispute, trivial indeed in its nature, but which kindled a flame that quickly spread over most of Western Europe. When Leo X. came to the Papal chair, he found the treasury of the Church exhausted by the ambitious projects of his predecessors. He therefore had recourse to every means which ingenuity could devise for

Protestantism at the fountain.

recruiting his exhausted finances, and among these he adopted an extensive sale of *indulgences*, which in former ages had been a source of large profits to the Church.* The Dominican friars, having obtained the monopoly of the sale in Germany, employed as their agent Tetzel, one of their own order, who carried on the traffic in a manner that was very offensive, and especially so to the Augustinian friars.

39. One of these, named Martin Luther, Professor of Theology in the University of Wittenberg, took the lead in opposing Tetzel. Having vainly sought to procure the suppression of the traffic from the Archbishop of Magdeburg, he appealed to the people and to men of letters (1517), by publishing ninety-five theses condemning the sale of indulgences as contrary to reason and Scripture.

40. This was in 1517. Several of the nobles and princes of Germany eagerly embraced his cause, for they were angered at seeing large quantities of money drained from their own country to be expended on works of art in Italy. The Papal party accepted Luther's challenge, fully believing that the slightest exertion of power would at once stifle opposition. Leo X., too proud to trouble himself about the opposition of a simple friar, published a *bull*, or decree, condemning the theses of Luther as impious and heretical (1520). The bold reformer at once declared open war against the Papacy by appealing to a general council, and burning the bull of excommunication in presence of a vast multitude at Wittenberg.

41. All Germany was soon in a ferment. Frederick,

* These indulgences were, in the early ages of the Church, remissions of the penance imposed upon persons whose sins had brought scandal on the community. But in process of time they were represented as actual pardons of guilt, and the purchaser of indulgence was said to be delivered from all his sins.

Duke of Saxony, was one of the first converts to the *Reformation*, as the movement now began to be called. Other German princes took the same side ; for indeed, as a Catholic historian has remarked, "Policy became more Lutheran than religious reform."

42. Pope Leo X. was now roused to the importance of doing something to arrest the spread of the new doctrines, and soon after Charles V.'s election as emperor, the Pope appealed to him to take the matter in hand. Accordingly, when, soon after his election, the young Emperor removed from Spain to Germany, he summoned an assembly, or *Diet*, of the German princes at the city of Worms. Luther was cited to appear before the Diet of Worms in 1521. Being called on to retract, he refused to do so ; and though he was dismissed under "safe-conduct" from the Emperor, yet Charles V. promised to "use all endeavors to extirpate the heresy."

43. Nevertheless, the new doctrines rapidly spread, and under various forms took deep root in Germany, France, Switzerland, England, Scotland, and Scandinavia. The result may be thus stated : allowing for considerable exceptions, the nations of Teutonic stock embraced the new doctrines, while most of the Latin race adhered to the faith of Rome.

44. An attempt was made to check the movement by the Diet of Spires, 1529 ; for by this assemblage a decree was promulgated forbidding any change until the meeting of a general council. Luther's friends and followers protested against this decree, and hence the professors of the reformed religion received the common name of *Protestants*.

45. We now turn to the other and political events of the age of Charles V., namely, the complications with Francis I. of France. This bitter rivalry led to four wars, in each of which the avowed object of

Spread of the
Reformation.

The Diet of
Worms.

Result.

Origin of the
name Protest-
tant.

Rivalry with
Francis I.

Francis was to preserve the balance of power, as against the menacing greatness of the House of Austria, represented by Charles V.

46. In the first war, which was mainly an Italian war, the decisive action was the battle of Pavi'a, 1525. Here the imperial forces shattered the French power in Italy; and Francis himself was taken prisoner and conveyed to Madrid, where he lay a year in prison. At the end of that time he was released by Charles on the promise that he would give up the Duchy of Burgundy, renounce all his pretensions to Italian territory, and surrender his two sons as hostages.

47. Francis had made the stipulations mentioned, without ever intending to keep them: the result was, that hostilities were immediately renewed, and the second war (1527 - 1529) began. This time Henry VIII. of England sided with Francis, who was also supported by the Pope. The French army entered Italy, but was there repeatedly defeated. This inclined Francis to peace; and as at the same time the Emperor was anxious to suppress the Reformation in Germany, a treaty was made in 1529 (Treaty of Cambray), the terms of which were quite unfavorable to Francis I.

48. The third war began in 1535, but in three years both parties were exhausted; so by the mediation of the Pope they concluded in 1538 a truce that was to last for ten years. Before the time of truce had half expired, hostilities were renewed, and the fourth war commenced. A strange alliance it was that Francis now formed; for Solyman, Sultan of Turkey, together with some of the Protestant princes of Germany, united with the French against Charles V., who was aided by Henry VIII. of England. The French king won a victory over the Emperor at Cerisoles; but this did not prevent the invasion of France both from England and

from Spain. However, the Emperor and the English monarch did not act in concert, and accordingly Francis concluded a peace with Charles at Crespy in 1544. Three years after this, 1547, the Emperor's two great royal contemporaries, Francis I. and Henry VIII., died.

49. At this time Charles V. became engaged in a contest with the Protestant princes of Ger- War with the Protestant princes. many, who had formed a league for their mutual protection at Smalcald, in 1531. A great council, called the *Council of Trent*, was convened against Protestantism in 1545. At the very commencement of the war, Maurice of Saxony, one of the leading Protestant princes, deserted the league and went over to the cause of the Emperor. The result was that the Protestant League was soon thoroughly broken up.

50. The triumph of the Emperor seemed now to be complete. Encouraged by this, Charles V. Defection of Maurice. became thoroughly tyrannical. But his overbearing course excited the animosity as well of the Catholic as of the Protestant princes of Germany. Maurice of Saxony, to whom he had owed his recent successes, and who was throughout a Protestant at heart, deserted the Emperor, joined the Protestant leaders, and formed a bold plan for compelling the Emperor to establish religious freedom. He formed an alliance with Henry II. of France (son and successor of Francis I.), and proclaimed war against the Emperor, 1552.

51. The Emperor's reverses in Germany were as rapid as had been his success, and he was compelled Triumph of Protestantism. to sign a treaty at Passau (1552) by which the free exercise of their religion was secured to the Protestants. Three years later (1555) the principles of mutual toleration were formally sanctioned by the Diet of Augsburg. Thus the Reformation gained its first decisive political triumph in Germany.

52. And now the clouds thickened fast around the Emperor. The son of his now dead rival, Francis I., had taken up, as a legacy, the long-standing quarrel, and was vigorously assailing the imperial power; while the Pope, angered at the Emperor's sanction of the principles of toleration at the Diet of Augsburg, became the avowed enemy of the House of Austria, and entered into close alliance with the king of France.

53. In this state of affairs Charles V. took a strange resolve: he determined to lay aside his crowns. Accordingly, in 1556 he resigned the scepter of Spain and the Two Sicilies to his son, Philip II., and the imperial crown to his brother Ferdinand: he then retired to the monastery of San Yuste [*yooos'tā*], in Spain, being resolved there to end his days. In the solitude of the convent he divided his time between religious duties and the making of mechanical contrivances. Towards his latter end he conceived the ghastly fancy of having his own funeral rehearsed. This theatrical display was the forerunner of the dread real tragedy itself; for death overtook the Emperor in 1558.

54. In summing up the character of Charles V., we may say that he was free from many of the vices of his kingly contemporaries. Yet his virtues were rather negative than positive, and seem to have been the result of his temperament, which was cold. He spoke but little, and a laugh or smile was rarely seen upon his face. In some respects he was a man of comprehensive views; yet his ambition was selfish, looking mainly to the aggrandizement of the House of Austria. He had great successes in his time; but in the end he was doomed to see all his

CHARLES V.

plans fail. Nor is the cause of this failure difficult to find : he did not comprehend his times. He stands to us as the last champion and the last support of the Middle Ages ; but the Middle Ages had passed away, — a new era had been ushered in by the new intellectual and religious movement, and the advance of the modern spirit was not to be checked even by the sovereign of Spain and the Indies.

2. ENGLAND UNDER HENRY VIII.

55. In the year 1509 Henry VII., the first of the Tudor line of English sovereigns, died, leaving as heir to the throne a son, who is known to history as Henry VIII. The young king, at this time eighteen years of age, was handsome, lively, accomplished, and learned. Soon after his accession he married Katharine of Aragon, widow of his brother Arthur, and aunt of Charles V. of Spain.

Events at the
accession.

56. The king soon became mixed up with continental politics, into which he was drawn by the fact that the two great sovereigns of France and Spain who were his contemporaries, namely, Charles V. and Francis I., both sought his alliance in their wars. Henry was generally on the side of the Emperor, and he more than once invaded France ; but in truth nothing very great was done by England on the Continent, and altogether the most important events of Henry VIII.'s reign were connected with matters that happened at home.

England's for-
eign relations.

57. During the first twenty years of this reign the most notable figure in political affairs was the celebrated Cardinal Wolsey. Wolsey was the son of a butcher ; but displaying while young great quickness and intelligence, he received a learned education with a view to his entering the Church. His first employment at court was in the humble office of chaplain ; but

Greatness of
Cardinal Wol-
sey.

becoming acquainted with the young monarch, he soon grew to be a great favorite. He was made Archbishop of York, then High Chancellor of England, and finally became Henry's sole minister.

58. It was in the early part of this reign that the doctrines of Luther began to make a great stir in Europe. (Henry's accession, 1509; Luther before the Diet of Worms, 1521.) At this time the English people were ardently Roman Catholic in faith, and Henry VIII. distinguished himself by writing a book against the Lutheran doctrines. The Pope was so much pleased with the production, that he gave the English king the title of *Defender of the Faith*. However, Henry was not destined to continue long an adherent of the Roman Pontiff, and we are now to see the circumstances under which the great schism arose.

59. After Henry VIII. had lived eighteen years with his first wife, Katharine of Aragon, he professed to feel conscientious scruples respecting the lawfulness of the marriage, on account of her having been the wife of his brother. About the same time he became enamored of the beautiful and fascinating Anne Boleyn [*bööl'in*], one of the queen's attendants. He now conceived the design of annulling his marriage with Katharine and marrying this younger and more agreeable person. To this end he applied to the Pope for a divorce.

60. The Pontiff (Clement VII.) was much perplexed by this request of Henry; for he could not accede to it without offending Charles V., one of his best supporters and the nephew of Queen Katharine. The process went on for several years, but without reaching the conclusion desired by the king. Wolsey at length fell under the king's displeasure for not acting with sufficient zeal in the matter; he was stripped of all his places of power and wealth, and, sinking under grief and mortifica-

tion, he died in 1530. In his last moments he is said to have exclaimed to his attendant, "Had I but served my God as diligently as I have served my king, he would not have given me over in my gray hairs."*

61. The negotiations with the Pope for the divorce went on for two years longer, and endless tricks and subterfuges were resorted to by both parties. Henry's decisive step.

At last in January, 1533, Henry took the final step from which there was no retreat,—he secretly married Anne Boleyn; and as, soon afterwards, the marriage with Katharine was declared invalid by the Archbishop of Canterbury, Henry's private union with Anne Boleyn was acknowledged, and on the 1st of June, 1533, she was crowned queen, with imposing splendor. In the same year was born their celebrated daughter Elizabeth.

62. History has pronounced a severe verdict on Henry VIII. for his conduct in divorcing Queen Katharine. And there is no doubt that in Verdict on his conduct.

many respects it deserves condemnation. But recent historians, and especially Froude in his "History of England," have endeavored to free the king from a considerable part of the burden of blame. His defenders call attention to the fact that Henry VIII. was moved by a *public* motive; to wit, the fear of civil war likely to break out, after his death, on the question of disputed succession, owing to the fact that he had no living son and heir by Katharine. It is further urged that on this account the divorce was warmly desired by the great body of the English nation.

* Shakespeare weaves this sentiment into the touching soliloquy of the Cardinal in the drama of Henry VIII.

" O Cromwell, Cromwell,
Had I but served my God with half the zeal
I served my king, he would not in mine age
Have left me naked to mine enemies."

Henry VIII., Act iii. Scene 2.

63. As regards the relations of the English people to the Catholic Church, all that had been done thus far was to declare that the Pope had no jurisdiction in England. There was no thought of secession from the unity of the Catholic faith, and this fact Parliament in 1534 took pains to declare. Nevertheless, events soon led to a considerable widening of the breach. Thus in this same year, 1534, the Pope declared King Henry VIII. to be excommunicated from the fellowship of the Church, and to have forfeited the allegiance of his subjects.

64. The English king now concluded that there was nothing left but to meet defiance with defiance. Accordingly the Pope's authority in England was declared to be abolished, and all persons were required to take an oath of allegiance, which pronounced the marriage with Katharine illegal, and the children by Anne Boleyn the only rightful heirs. In addition, Parliament in 1534 passed an act declaring the king to be the Supreme Head of the Church of England, and all who denied him this title were to be held guilty of high treason.

65. This led to some terrible acts of persecution against Catholics, whose consciences forbade their acknowledgment that the king was the head of the Church. First a number of humble friars were put to death. Then came nobler victims, — the venerable Bishop Fisher, and the illustrious Sir Thomas More, who had been Lord Chancellor after the disgrace of Wolsey, and who was acknowledged to be the most learned and eloquent man in England.

66. The happiness which the king had expected to find with Anne Boleyn was destined to be of brief duration. In less than three years after the marriage, charges of gross misconduct were brought against her; she was brought to trial before a high court, and, being found guilty, was condemned and beheaded, 1536.

67. Hitherto, though professing independence of the Church of Rome, Henry still maintained and enforced by bloody laws most of its doctrines. Changes in religion. Now, however, he took measures for altering the system of worship to something nearer the Lutheran model, and also for suppressing the numerous monasteries throughout the country. As many as 645 monasteries, 2374 chantries and chapels, 90 colleges, and 110 hospitals were broken up by this powerful but unscrupulous monarch. He partly seized the revenues for his own use, and partly gave them away to the persons who most actively assisted him. In the mean time it was difficult to tell what the state religion really was; for if not Catholicity, it was also not Protestantism. And, indeed, for many years Henry vacillated so much in his opinions, and enforced them with such severe enactments, that many persons of both religions were burnt as heretics.

68. The day after the execution of Anne Boleyn, the king married Jane Seymour; but in the following year she died, and Henry then married Henry's subsequent marriages. Anne of Cleves, a German princess. He was not pleased with her person, however; so he divorced her by an act of Parliament. Next he married Catherine Howard (1540), but had not been long united to her when he discovered that she had been guilty of evil conduct both before and since her marriage. The unfortunate woman was beheaded. To close this tragic business of Henry's marriages, it may be added that he took for his sixth wife Catherine Parr, widow of Lord Latimer (1542). She seems to have been a person of great discretion, who knew how to humor her arbitrary lord, and she survived the king, whose death took place five years afterwards.

69. Henry VIII. died in 1547, being in his fifty-sixth year. The common verdict which has been Common verdict on Henry VIII. pronounced on him by historians is that he was a remorseless tyrant. "If all the pictures and patterns

of a merciless prince," says Sir Walter Raleigh, "were lost in the world, they might all again be painted to the life out of the story of this king." "Perhaps no other monarch since the emancipation of woman from polygamy," says Mackintosh, "has put to death two wives on the scaffold, divorced another whom he owned to be faultless after twenty-four years of wedded friendship, and rejected a fourth, without imputing blame to her, from the first impulse of personal distrust."

70. In recent times a tendency to modify the rigor of this judgment has shown itself. It is urged* that an examination of contemporary history shows that for some of his arbitrary and seemingly cruel acts he had proper justification, and that many other measures which we must regard as reprehensible were forced upon him by the necessities of the difficult and perilous times in which he and England found themselves.

71. Though Henry VIII. ruled with a strong hand, his reign was not unfavorable to the progress of liberty. He first made Parliament a real power; and though that body was servile in doing his bidding, yet it then learned its strength and established precedents that were afterwards used to humble the insolence of kings. Though he struck at the high heads, he favored the commonalty: the taxes were light, the government was energetic, and the people were contented and well to do; so that, in spite of his faults, his follies, and his crimes, his reign tended, under Divine Providence, to the prosperity and glory of England.

HENRY VIII.

* See Froude's History of England.

3. RISE OF THE DUTCH REPUBLIC.

72. The name of the Netherlands is at present given only to the kingdom of Holland. In the 16th century, however, that name denoted a cluster of provinces extending from the Zuyder Zee and the Dollart to the northern frontiers of France, and forming that tract of fertile and alluvial land which is at present occupied by the two kingdoms of Holland and Belgium. These provinces were a part of the extensive dominion which the Emperor Charles V., on his abdication in 1556, resigned into the hands of his son, Philip II., King of Spain.

Extent of the Netherlands.

73. At this period the Netherlanders had by industry and intelligence attained a high degree of prosperity. They were the boldest navigators and the most skillful manufacturers in Europe. They were ardent lovers of civil liberty, and they were now eagerly embracing the principles of the Reformation.

Spirit of the people.

74. This last fact was very offensive to Philip II. The religious zeal of Charles V. had, in passing into the gloomy character of his son, taken the form of a dark fanaticism. He was a silent, plotting, patient man, and, sitting in his palace of the Escorial, he wove his webs of political intrigue. And now, above all, his somber soul brooded on how the heresy that had spread into the Low Countries might be rooted out, for he saw that if this were not done, a separation between the Netherlands and the power of Spain was inevitable.

Character of Philip.

75. It was soon discovered that the king had resolved to carry on the government in his own way, and independently of the will of the country as expressed by the council of nobles. The next step was the introduction of the terrors of the Inquisition. The people rose in a species of frenzy, and within four days no less than four hundred churches, with everything they contained, were

The quarrel begins.

destroyed. This riotous outrage infuriated the king, and accordingly he sent the Duke of Alva, a relentless soldier, with a large force to crush the insurrection, 1567. Then followed five years of dreadful work. The Duke of Alva, at the head of the famous "Blood Council," seized, imprisoned, and beheaded; and in six months he had passed a sentence of death upon every inhabitant of the country!

76. In this sad situation the man to whom the Netherlands looked for deliverance was William of Nassau, Prince of Orange, and known in history as William the Silent. He was a Protestant, and now took up the cause of the people. He led an army out of Germany into the Netherlands; but as the Spaniards held all the fortified towns, he could for a time accomplish very little. The capture of Brille (1572) was the first success. Then the people of the province of Holland, under the Prince of Orange, cast off the Spanish yoke. The province of Zealand followed. Various towns were taken, and the gallant defense of Harlem convinced Alva of the inability of strong measures. He accordingly asked to be recalled, 1573.

77. Alva was succeeded by Requesens, commander of Castile, a man of mild disposition. The war still went on. The defense of Leyden (1574), which was saved by cutting the dikes and flooding the Spanish trenches, was a great blow to the pride and power of the Spaniards. But they proved too powerful for the two revolted provinces. Then the Dutch in their despair offered the sovereignty of their country to Elizabeth of England, but the virgin queen, though a Protestant, did not then wish to interfere. The war raged as fiercely as ever.

78. Meanwhile Requesens died; and the Spanish garrison committed such atrocities at Antwerp that all the provinces entered into a union called

death of Wil-
liam.

the *Pacification of Ghent* (1576), William of Orange being chosen chief magistrate, with the title of Stadtholder. The struggling Dutch were able to confirm their constitution in 1579, when the *Union of Utrecht* formed the seven northern provinces into the Dutch Republic, under the presidency of William.

79. Philip II. had set a reward on the head of the Prince of Orange, and the dagger of an assassin deprived the states of their able and patriotic leader. Their gratitude made them appoint his son Maurice, a youth of eighteen, in his stead. He proved himself a valiant captain in the war with Spain, which continued to rage in the southern provinces. The Spanish general, the Duke of Parma, took Antwerp, which was a great blow to the states. Elizabeth now resolved to aid the Dutch. The Earl of Leicester accordingly was sent with an English force of 6000 men to Zutphen, near which the heroic Sidney received his mortal wound.

80. The bitter contest continued for several years yet. Towns were taken on both sides. The patience of the Netherlanders, however, sustained them through all their trials, and finally the Spanish commander gave it as his opinion that the subjugation of the United Provinces was impracticable. The pride of Spain was reduced to treat with the Dutch as an independent nation, and under the mediation of France and England a truce for ten years was made, 1609.

81. Thus, after a severe struggle of thirty-seven years, the independence of the Dutch Republic was secured, though it was not till the *Peace of Westphalia* (1648) that this independence was acknowledged by Spain. During the conflict the Dutch had increased in wealth, had made extensive acquisitions in the East Indies, and had established the most powerful navy in Europe.

Summing up.

4. CIVIL AND RELIGIOUS WARS OF FRANCE.

82. The history of France during the latter half of the 16th century is mainly taken up with a series of civil and religious wars between the Catholics and Protestants within the country.

Subject of the chapter.

CONNECTING NOTE. — On the death of Francis I. (1547), the crown passed to his son, Henry II., who was married to Catherine de Medicis, a wily and artful Italian. After a reign of twelve years (1547–1559) he met his death accidentally at a tournament held in honor of the marriage of his son Francis with Mary Queen of Scots. This son, a sickly boy of sixteen, now ascended the throne under the title of Francis II. The guardians of the feeble sovereign and managers of the Court were the two brothers Guise, — Francis the general, and the Cardinal of Lorraine, uncles of the fair young queen. The nominal sovereignty under Francis II. lasted only seventeen months; for at the end of that time he died, and his young widow, Mary Queen of Scots, sighing a sad farewell to beautiful France, sailed back to Scotland. Two other sons besides Francis were left by Henry II. The eldest, Charles IX., was now but nine years old; so the queen-mother, Catherine de Medicis, claimed the custody of her son, and became in fact, if not in name, regent of the kingdom. This brings the train of events up to the epoch at which begins a direful series of civil and religious wars.

83. Protestantism had taken root in France; but the French Protestants were followers, not of Luther, but of John Calvin, a Frenchman by birth, who had settled at Geneva. His teaching was a greater departure from the doctrines of the Roman Church than was that of Luther. The followers of Calvin grew to be very numerous in France, where they were known by the name of *Huguenots*.* The Huguenots were cruelly persecuted by Francis I., in whose reign they first came into notice, as they were also by his successor Henry II., and by his successor, Francis II.

* The name "Huguenot" is a corruption of the German word "Eidgenossen," that is, *persons associated by oath*, — "Covenanters"

84. These persecutions were the underlying cause of a series of wars which began in France in 1562. It should be noted, however, that these wars were quite as much political as religious ; for, so far as the great actors were concerned, it was personal ambition fully as much as religious zeal that animated them. We must, accordingly, guard carefully against misinterpreting the nature of this contest. For there were few on either side that cared for the things in whose name they fought ; while on both sides the most frightful crimes were committed in the name of religion.

85. During the brief reign of the feeble Francis II. the all-powerful Guises, together with Catherine de Medicis, governed the country. This fact excited the anger and jealousy of the Princes de Bourbon, who were of the blood royal, and claimed a direct descent from Saint Louis. One of these princes, Antoine de Bourbon, enjoyed the title of King of Navarre ; another occupied the principality of Condé. These nobles, being excluded from all court influence, formed an opposition party to the Guises. The Prince of Condé embraced the Reformed religion and became a Huguenot, and his example was followed by Admiral Coligny [*kol-lēn-yē'*] and other powerful persons. The partisans of the opposing factions arranged themselves on the one side or on the other.

86. In 1562 an event happened which precipitated France into civil war. The Duke of Guise, passing through the little town of Vassy in Champagne, found some Protestants singing hymns in a barn : his attendants insulted them ; blows were given and returned, and sixty of the Protestants were killed. This kindled the flame. For a year there was war, or rather mutual massacre. The contest went on till the following year, 1563, when hostilities were brought to a close by a treaty ; but this was soon broken, and between 1567 and

1570 the whole period was a continuous war, interrupted only by short and unsteady truces. The *Treaty of St. Germain* (1570) put an end to the contest.

87. In the latter part of the contest the chief part on the Reformed side had been taken by the young Henry of Bourbon, King of Navarre, who was next heir to the crown of France after the sons of Henry II. To cement the peace a marriage was proposed between the young king of Navarre and the Princess Margaret, the beautiful sister of the king of France. The proposal diffused universal joy, and both the Catholics and the Protestants came to witness the nuptials, which were celebrated on the 18th of August, 1572.

88. The events which led to the fearful tragedy that accompanied this marriage have been so misrepresented by party writers on every side, that it is desirable to state the facts as they have been narrated by the principal actors themselves.*

89. Charles IX., feeble in body and weak in intellect, had just attained his legal majority, but the real power of the state was wielded by Catherine de Medicis. In some of his conversations with the Protestant lords Charles complained very bitterly of the state of thralldom in which he was held, and Coligny, commiserating the unhappy monarch, promised to aid in his deliverance. The king soon began to vaunt of his design to assume the reins of power and to remove his mother and brother from the court. They took the alarm, and easily discovering by whose counsels the king was influenced, resolved to assassinate the Admiral Coligny. The attempt was made, but failed. When the Huguenot leaders discovered the real instigators of the plot, they very imprudently proclaimed their intention to exact heavy vengeance upon Catherine and her favorite son Henry.

* The following account is based mainly on the narrative of Tayler.

90. In this emergency Catherine convoked a secret council of her friends, and there it was re-^{Preparations for the tragedy.}solved to strike, on the eve of St. Bartholomew, a blow that would effectually crush the Huguenot party. Late in the evening of August 23d Catherine went to Charles IX., accompanied by her chosen advisers, and told him that the Protestants had formed a plan for the extermination of the royal family, which could be frustrated only by the most immediate and decisive measures. The feeble monarch, who was not many degrees removed from idiocy, exhibited every sign of helpless alarm: whilst in this condition his mother placed before him the dreadful decree of extermination, and demanded his signature. Charles at first refused, and for some time it was doubtful whether his consent would be obtained. At length he exclaimed, "I consent, provided that you kill them' all, and leave no survivor to reproach me."

91. On the night of August 23 - 24 the dreadful tragedy known as the Massacre of St. Bartholomew ^{Bartholomew's Eve.} began. The tocsin was sounded at two in the morning. All had been arranged beforehand, and the participants carried a scarf on the left arm and a white cross in the hat, for better distinction. Death reigned throughout Paris; the Huguenots rushed out of their houses half naked at the sound of the tocsin and the cries of their brethren, and were slaughtered in the streets. Coligny was one of the first victims; but Henry of Navarre saved his life from the personal fury of the king by promising to go to mass. After three days of direful destruction there fell a dead silence upon the streets of Paris, — there was nobody left to slaughter. Ten thousand victims are said to have fallen in the city. Royal orders were then forwarded through the provinces for the renewal of the massacre, and forty-five thousand more victims were sacrificed.

92. Queen Catherine and her son had anticipated as the

result of this blow a reign of submission and the termination of the civil wars. But they were deceived. The Huguenots, utterly desperate, flew to arms : the war broke out with greater fury than before, and it was terminated only after a year of bloodshed.

93. Less than two years after the fatal night of St. Bartholomew, Charles IX. died at the age of twenty-four (1574). His brother, the third son of Catherine de Medicis, now came to the throne with the title of Henry III. During his reign of fifteen years France was in a frightful state of anarchy, confusion, and bloodshed, and in 1589 Henry III. died by the hand of an assassin. With him the House of Valois, which had ruled in France during more than two centuries and a half, became extinct.

94. The crown now came of right to Henry of Navarre, and indeed Henry III. had before his death recognized his right to the succession. But this prince, who now took the title of Henry IV. (*Henri Quatre*), had to fight for his throne. He won two signal victories over his enemies, at Arques [*ark*] (1589) and at Ivry (1590), and three years later he removed all grounds of opposition by himself becoming a Catholic.

95. Henry IV., the first king of the House of Bourbon, was crowned King of France and Navarre, 1594. His first care was to terminate the religious disputes which had so long distracted the kingdom. For this purpose he in 1598 promulgated the celebrated *Edict of Nantes*, which re-established all the favors that had ever been granted to the Protestants by other princes.*

* The Edict of Nantes allowed the Protestants the exercise of their worship ; it left open to them admission to all employments ; established in every parliament a chamber composed of magistrates of each religion ; tolerated the general assemblies of the Reformers ; authorized them to raise taxes among themselves for the benefit of their church ; provided ministers for them ; and granted them fortified places of safety, the principal of which was Rochelle'.

The Edict of Nantes put an end to the disastrous wars which for thirty-six years had desolated the kingdom.

96. The administration of Henry IV. and of his sagacious minister Sully was a blessing to France ; France under Henry IV. agriculture revived, commerce was restored, new branches of industry were opened, and vexatious imposts abolished. The king became the most popular of sovereigns, and, despite some weaknesses of character, was unquestionably the most honorable and humane.

97. The career of Henry IV. was ended in the year 1610 by the hand of an assassin. On the 14th of May, as he was riding through the His death. streets of Paris in his carriage, a fanatic named Ravallac [*rä-vah-yak'*] mounted on the wheel, removed the leather curtain, and reaching over stabbed the king with two blows, of which the second was instantly fatal. Such was the end of Henri Quatre, surnamed by some the Great, and by others the Father of his People.

5. AGE OF QUEEN ELIZABETH.

98. The reign of Queen Elizabeth is in every respect one of the greatest eras in English history. It Character of the age. was an age of wonderful activity both material and intellectual, an age of great fullness of national life ; and this appeared in bold maritime enterprises, in deeds that gave England a proud pre-eminence in the politics of Europe, and in the most original and powerful literary creations ever witnessed.

99. Elizabeth was the daughter of Henry VIII. and Anne Boleyn. She came to the throne at the Genealogy of Elizabeth. age of twenty-five, in the year 1558, that is, eleven years after the death of her father.

CONNECTING NOTE. — The interval between Henry VIII. and Elizabeth was filled by two brief reigns.

1. Reign of Edward VI. lasted for six years (1547–1553). Edward,

who was the son of Henry VIII. by his third wife, Jane Seymour, was but ten years old when his father died; so the government was placed in the hands of one of the great nobles, Somerset, named the Protector; but Somerset was brought to the scaffold by another of the great lords, named Warwick. Warwick married his son to the Lady Jane Grey, a beautiful and accomplished princess of the blood royal; and when the young king Edward died at sixteen (1553), Warwick caused Lady Jane Grey to assume the crown. However, she can hardly be said to have worn it, for in ten days a stronger party set Mary, daughter of Henry VIII. by his first wife, Katharine of Aragon, on the throne. Mary caused Lady Jane Grey and her husband to be beheaded.

2. Reign of Mary lasted for five years (1553-1558). Under Edward the Protestant party had held sway in England; but Mary, who was an ardent Catholic, caused all the laws in regard to Protestantism to be repealed, and many men were burned for their religion. The chief scene of these tragedies was Smithfield, in London. In order to strengthen herself against the Protestant interest, she married Philip II. of Spain, son of the Emperor Charles V.; but the people, who detested the Spanish alliance, took care that Philip should have no power in England, — and on the whole the result was to withdraw the English more and more from the Pope. With the death of Mary in 1558 came a new turn of affairs.

100. From the peculiar circumstances of her birth, Elizabeth's right of succession was denied by all the Views as to the succession. Catholics at home and abroad. By the Catholic party in England the person looked upon as the legitimate sovereign was the then young, beautiful, and fascinating Mary Queen of Scots.*

101. Under these circumstances Elizabeth deemed that her best course lay in restoring and maintaining the Prot-

* Mary of Scotland was the daughter of James V. of Scotland, and grand-niece of Henry VIII. This princess, celebrated in history as Mary Queen of Scots, had been brought up in the Catholic faith at the court of France. In 1559 (the year after that in which Elizabeth came to the throne) Mary was married to the Dauphin of France who, the next year, by the death of his father, became king of France, under the title of Francis II. In the following year, however (1560), Francis II. died, and in 1561 Mary returned to Scotland to assume the personal government of that country.

estant religion in her own country, and in seeking to support it in all others where the people were favorable to it. Accordingly, soon after her accession Elizabeth's policy. two celebrated acts—the Supremacy Bill and the Act of Uniformity—were passed for the purpose of crushing the political influence of Catholicism. By the Supremacy Bill all clergymen and all holding offices under the crown were compelled to take an oath ascribing to Elizabeth all power both in the Church and State of England, and abjuring the temporal and spiritual jurisdiction of any foreign prince or prelate; the Act of Uniformity prohibited any one from attending the ministry of any clergyman who was not of the established religion. These laws were enforced with great severity, and under them many Catholics suffered death.

102. It was at this time that the Puritans arose in England. Many Protestants who had fled to the Continent from the persecution under Mary, Rise of Puritanism. returned on the accession of Elizabeth. For a time they reunited themselves with the Church of England; but being pressed to acknowledge the authority of Elizabeth as Supreme Head of the Church, they separated from that body in a few years. As they professed a desire to establish a purer form of worship, they received in derision the name of Puritans. As they refused also to be bound by the Acts of Supremacy and of Uniformity,* they were fined and imprisoned in great numbers during the rest of this reign.

103. Mary Queen of Scots had in 1561 returned to Scotland. After seven stormy years there she was The Queen of Scots. compelled to flee across the border (her infant son being proclaimed King of Scotland under the title of James VI. †), and came to implore the pity of Elizabeth.

* From this fact the Puritans are often called *Nonconformists*.

† James VI. of Scotland became, on the death of Elizabeth, King of England, under the title of James I. See p. 350.

The English queen imprisoned her in Bolton, Tutbury, and Fotheringay castles for eighteen years.

104. During this time Elizabeth was constantly harassed by plots formed by her Catholic subjects in behalf of the Queen of Scots. An act was passed declaring that any person *by* or *for* whom any plot should be made against the Queen of England should be guilty of treason. When, soon after, a gentleman named Babington formed a conspiracy for assassinating Elizabeth and placing Mary on the throne, the latter became liable to the punishment for treason. She was subjected to a formal trial in her prison of Fotheringay Castle, and found guilty.

105. The warrant for her execution was delayed by the reluctance — real or pretended — of Elizabeth. At last the queen signed the warrant, and sent her secretary, Davidson, with it to the chancellor, that it might receive the great seal. Recalling this order next day, she found that she was too late: the seal was affixed, and the warrant was on the way to Fotheringay. There, in one of the castle halls, in the gray light of a February morning (1587), Mary Stuart, aged forty-five, was beheaded.

106. The Catholic powers of the Continent formed many schemes for annoying or dethroning Elizabeth, and these finally culminated in a great invasion by Spain. The *Invincible Armada*, the most formidable fleet ever seen up to that time, was fitted out against England. This armament consisted of 129 ships, 3000 cannon, and 20,000 men, while 34,000 additional land forces prepared to join from the Netherlands.

107. In July, 1588, the Armada entered the English Channel. Thirty vessels prepared to meet the Spanish fleet. The command was taken by Lord Howard of Effingham. The English fleet attacked the Armada in the Channel, and was found to have a considerable advantage in the lightness and manageableness of

the vessels. After seven days, only three of which passed without warm actions, though there was no decisive engagement, the Spanish fleet was so harassed and damaged that it was forced to take shelter in the roads of Calais. The English during the night sent in fire-ships, which destroyed several vessels, and threw the others into such confusion that the Spaniards no longer thought of victory, but of escape. At daybreak they were attacked by Howard, Drake,

THE ARMADA.

and Lord Henry Seymour, and though the Spaniards fought gallantly, they were completely at disadvantage; in seamanship and gun practice they were inferior to their adversaries, and their great floating castles were no match for the active little English vessels. Had not the queen's ill-timed parsimony kept her fleet insufficiently supplied with powder, the Armada would have been destroyed. As it was, the Spanish leader, the Duke of Medina Sidonia, attempted to return home by sailing round the north of Scotland; but dreadful storms arose, scattering the fleet about in the seas of Scotland and Ireland; and of the triumphant navy that sailed from Lisbon but a third part returned in a wretched state to tell of the calamity.

108. This success was regarded as a triumph, not so much of England as of the Protestant cause Effect of the victory. throughout Europe; it virtually established the independence of the Dutch, raised the courage of the Hu-

guenots in France, and completely destroyed the decisive influence that Spain had acquired in the affairs of Europe.

109. The years following the defeat of the Armada were years of splendor and triumph. The flag of England became supreme on the seas; English commerce penetrated to the farthest corners of the Old World, and English colonies rooted themselves on the shores of the New; while the national intellect, stimulated by the excitement of sixty years, took shape in a literature which is an eternal possession to mankind.*

110. At this time the chief articles exported from England to the Continent were wool, cloth, lead, and tin. Formerly these had been sent in vessels belonging to the Hanse Towns; but now English ships were substituted for this trade. Birmingham and Sheffield were already thriving seats of the hardware manufacture, and Manchester was becoming distinguished for making cottons, rugs, and friezes. Stocking-weaving and the making of sail-cloth, serge, and baize, took their rise in this reign. The progress of other arts was much favored by the bloody persecutions in the Netherlands, which drove into England great numbers of weavers, dyers, cloth-dressers, etc.

111. Amongst the wealthier classes the wearing of handsome apparel, and of gold ornaments and jewelry, made a great advance. Coaches were introduced, but for a time were thought fit for the use only of ladies. Great improvements were made in the building of houses. Theatrical amusements were begun and became very popular, though only in London. The smoking of tobacco was introduced by Sir Walter Raleigh, who became acquainted with the plant in "Virginia."

112. During forty years of her reign Elizabeth was guided by the advice of Lord Burleigh, a wise and cool-

* Froude, History of England.

tempered statesman. He rose to be Lord Treasurer, and by his policy greatly increased the revenue of the kingdom. Sir Francis Walsingham, too, as Secretary of State, enjoyed much of Elizabeth's favor.

*Elizabeth's
ministers.*

113. It is remarkable that while Elizabeth increased in power and resources, she became more noted for feminine weaknesses. Her favorite in middle life was Robert, Earl of Leicester, a profligate and a trifler. In her latter days she listened to the addresses of the Earl of Essex, a young man of greater courage and better principle, but also headstrong and weak. Essex, who had acquired popularity by several brilliant military enterprises, began at length to assume an insolent superiority over the queen, who was on one occasion so much provoked by his rudeness as to give him a hearty box on the ear. Notwithstanding all his presumption and caprices, the queen still dotingly forgave him, until he at length attempted to raise an insurrection against her in the streets of London, when he was seized and condemned to die. He might still have been pardoned, if a ring given to him by the queen in some moment of tenderness, to be sent to her when any danger hung over him, had reached her. It never came, and Essex was beheaded in the Tower, aged thirty-four.

Her favorites.

114. Some two years later the queen was entreated to visit the Countess of Nottingham, who was dying. This lady confessed that Essex had intrusted the ring to her to be carried to Elizabeth; but that she, influenced by her husband, a bitter enemy of the earl, had not delivered it. Rage and grief seized the queen; and it is said that she shook the dying countess in her bed.

*Story of
Elizabeth.*

115. Never happy since the death of Essex, she sank under this blow. Ten days and nights she lay on cushions on the floor, taking neither

Her death.

food nor medicine; and then falling into a heavy sleep she died, March 24, 1603. She was in her seventieth year.

116. In Elizabeth's reign of forty-five years England advanced politically and commercially from the position of a second-rate to that of a first-rate power. It follows that she was a sovereign of very remarkable ability. Yet her character was a strange blending of the base and the noble, the weak and the strong. She bribed and bullied and deceived, and to the cruelty of a Tudor she added personal vanity and insatiable fondness for flattery and admiration. Still she had royal traits, and the heart of a *king*, and all she did was for her country. Throughout her long and agitated reign her constant object was the glory of her realm, the establishment of a united and irresistible bulwark against foreign oppression and domestic disunion. The proud pre-eminence which England held before all Europe while Elizabeth grasped the scepter is the noblest epitaph on the Virgin Queen.

THE VIRGIN QUEEN.

GREAT NAMES OF THE SIXTEENTH CENTURY.

ARTISTS.

Michel Angelo (1475 - 1564), an Italian sculptor, painter, and architect. He flourished under the patronage of Lorenzo de Medici. His works are characterized by exceeding massiveness and grandeur. He superintended St. Peter's, but did not live to complete the dome.

Raphael (1483 - 1520), an Italian painter of great distinction. Madonnas and sacred pieces chiefly employed his brush. His great work in

MICHEL ANGELO.

RAPHAEL.

Rome was the decoration of the walls of the Vatican. After producing immortal works, he died at the age of thirty-seven.

Titian (1477 - 1576), a Venetian portrait and landscape painter. His chief works are at Venice and Madrid. By many he is considered the prince of colorists.

Albert Dürer (1471 - 1528), a German painter, engraver, and sculptor. He is entitled the Father of German painting, and has certainly the pre-eminence. His best paintings are *Christian Martyrs in Persia*, *Adoration of the Holy Trinity*, and other sacred subjects.

Holbein (1498 - 1543), next to Dürer the most distinguished of German artists. The greater part of his life was spent in England, under the patronage of Henry VIII. He was celebrated for his portraits.

WRITERS.

Spenser, Edmund (1553 - 1599), one of England's greatest poets. His chief work is the *Faerie Queen*, an allegorical poem, written in stanzas of nine lines each, called the Spenserian stanza. It is not now much read, for the diction is archaic, and the poem lacks anything like strong human interest; but the *Faerie Queen* exhibits exquisite sweetness of language, pure and tender feeling, and fine imagination.

William Shakespeare (1564 – 1616), the greatest creative genius that ever lived. He was born at Stratford-on-Avon, where he lies buried.

SHAKESPEARE.

Removing, when a young man, to London, he became an actor, a manager of a theater, and a playwright. His fame rests on his dramas, of which he wrote thirty-seven. Among the greatest are *Macbeth*, *King Lear*, *Hamlet*, *Othello*, *Midsummer Night's Dream*, *The Tempest*, *The Merchant of Venice*, *Romeo and Juliet*, and *Julius Caesar*. Shakespeare has been called the "Myriad-minded." Some authors may be said to equal him in a particular point, but no man ever possessed his wonderful

power of searching out and exhibiting the workings of the human heart.

Sidney, Sir Philip (1554 – 1586), a courtier of Queen Elizabeth, who called him the "jewel of her dominions." Though he did not write for publication, being a man of the court and the camp, he had a fine poetic temperament, and he produced two works that had a powerful influence on the intellectual spirit of his age. These were *The Arcadia*, a heroic romance, now but little read, and the *Defense of Poesie*, one of the earliest pieces of English criticism.

Raleigh, Sir Walter (1552 – 1618), also a courtier, a soldier, and an adventurer, and necessarily a man rather of deeds than of the pen, is known for one celebrated work, — his *History of the World*. Although of course superseded in matters of fact by later works, it is regarded as a model of style, and contains passages of lofty eloquence. He was also a poet of no mean ability, and a great friend of Spenser. Raleigh was a favorite of Queen Elizabeth; but he incurred the displeasure of James I., and was beheaded on a groundless charge of treason.

Cervantes (1547 – 1616), a renowned Spanish writer. He led an adventurous life, even falling into the hands of pirates, and being sold into slavery. He wrote numerous plays and tales, but his immortal work is *Don Quixote*, one of the finest pieces of humor ever penned.

Rabelais (1483 – 1553), a famous French satirist. He was a priest, and wrote a book called the *Life of Gargantua and Pantagruel*. It vividly illustrates the first half of the 16th century, but is immoral.

Montaigne (1533 – 1592), the most lovable of French skeptics. He was a judge and mayor of Bordeaux; but after the Bartholomew massacre he retired from the court to the solitude of his own château. Here he jotted down the observations on life and manners which were afterwards published as his *Essays*. His motto was *Que sais-je?* (What do I know?) The *Essays* were early translated into English, and have been largely read ever since.

Ariosto (1474 – 1533), an Italian poet, whose great work was *Orlando Furioso*. The Emperor Charles V. created him laureate.

Tasso (1544 – 1595), an Italian poet, who celebrated the First Crusade in beautiful language in his *Jerusalem Delivered*.

Camoens (1524 – 1579), the only Portuguese poet of European reputation. His great poem is the *Lusiad*, which celebrates the chief actors in and events of Portuguese history.

PHILOSOPHERS AND SCIENTISTS.

Copernicus (1473 – 1545), a celebrated German astronomer. He was the first to question the ancient theory of the heavens (called the Ptolemaic theory), which taught that the earth was the centre round which all the heavenly bodies revolved. This doctrine had remained unquestioned for fifteen hundred years, when Copernicus demonstrated its falsity. He feared, however, to shock general belief by publishing his proof, and his great work, *De Orbium Celestium Revolutionibus*, was finally published by a cardinal, and dedicated to Pope Paul III., himself

a mathematician, — a politic step to secure himself from attack.

Galileo (1564 – 1642), a celebrated Italian astronomer. He adopted the Copernican system, and making use of the then recent invention of spectacle-glasses, he contrived a telescope with two such glasses in a leaden tube. By the aid of this instrument he discovered the satellites of Jupiter, the ring of Saturn, and the moonlike phases of Venus. Twice he was carried before the Court of Inquisition to renounce the theory of the earth's rotation, which he had put forth in his *System of the World*. He publicly recanted, to escape torture, but on rising from the ground is said to have exclaimed in an undertone: *E pur si muove*, — “It does move, for all that!” *

Tycho-Brahe (1546 – 1601), an astronomer of Copenhagen. Frederick II. of Denmark erected an observatory on the island of Huen, and there Tycho-Brahe was established for many years, making astronomical observations that were of great value.

* It should be said that the letters of Galileo's daughter discredit this story.

CHAPTER III.

GREAT EVENTS OF THE SEVENTEENTH CENTURY.

TOPICS... { England under the Stuarts.
The Thirty Years' War.
The Age of Louis XIV.

I. ENGLAND UNDER THE STUARTS.

117. ELIZABETH was the last of the Tudors. On her death, in 1603, James VI. of Scotland, son of Mary Queen of Scots, succeeded to the throne, and took the title of James I. of England.* With James I. begins the Stuart period of English history,—an eventful period, comprising six reigns and covering the whole of the 17th century.†

118. The distinctive feature of this period is the arduous and continuous struggle on the part of the people against the arbitrary and unconstitutional government of the Stuart sovereigns. The Tudors had been despots, but they ruled with vigor and tact. The Stuarts, at least James I., the two Charleses, and James II., had none of the rugged sense of Henry VIII. and his great daughter Elizabeth;—and, besides, times were changed, for

* James VI. of Scotland was the nearest living lineal descendant of Henry VII. Strictly speaking, his claim to the crown was not perfect; but Elizabeth on her death-bed declared as her will that her successor should be “her cousin of Scotland.”

	A. D.		A. D.
† James I. (son of Mary Queen of Scots).....	1603	James II. (brother).....	1685

[The Commonwealth and Cromwell].....	1649	Anne (daughter of James II.).....	1702
Charles II. (son of Charles I.).....	1660		

the English people had in the mean time been advancing greatly in intelligence, and consequently in the love of liberty. Blind to this significant fact, James I. no sooner came to the throne than he began to proclaim that the king, by Divine right to the crown, was above all laws. This is the famous Stuart doctrine of the "Divine Right of Kings," — on which doctrine James I. was almost crazed, and which he transmitted to his son, Charles I.

119. In carrying out this policy he was guilty of the most arbitrary and illegal measures, — imprisoning ^{James and his} members of Parliament, and raising money by ^{Parliament.} forced loans, Star-Chamber fines, and "benevolences." But Parliament gained some important advantages. They declared against monopolies and royal proclamations not authorized by Parliament; they secured their right of impeachment and of deciding disputed elections; and finally, when James told them they had no right to interfere in state affairs, they recorded the memorable protest that the "Liberties of Parliament are the undoubted birthright of the subjects of England; that all matters of debate are fit subjects for discussion there; that every member has a right to freedom of speech; and that no member can be lawfully imprisoned or molested for his conduct in Parliament, except by order of the House itself."

120. The reign of James I. was not marked by what are usually called great events. This was owing ^{Characteristics} to his timid character, which induced him to ^{of this reign.} maintain peace, at whatever sacrifice, throughout the greater part of his reign. On the other hand, it may be said that under the rule of this king the nation took greatly to trade and maritime enterprise, and increased rapidly in wealth and intelligence.

121. James I. was an oddity in human character. His appearance was awkward, chiefly from the ^{Character of} weakness of his knees. He was weak, obstinate, ^{James I.}

and conceited. He made a great show of his learning, which was considerable, and he wrote several books ; but he was exceedingly pedantic. The French statesman, Sully, called him "the wisest fool in Europe," and the phrase exactly paints his character.

122. The respect of the English people for royalty was not increased by the policy or character of James I., and the folly of that king descended to his son, Charles I., who came to the throne at the age of twenty-five (1625). He had a higher notion than even his father of the "Divine Right of Kings to govern wrong."

123. At the time of the accession of Charles I. a foolish war with Spain was going on. The Parliament having refused to grant the funds necessary for continuing it, the king raised money by illegal means. A general discontent spread over the nation. The Commons, seeing that, if the king could support the state by self-raised taxes, he would soon become independent of all control from his parliaments, resolved to take every measure in their power to check his proceedings. They also assailed him respecting a right, which he assumed, of imprisoning his subjects upon his own warrant and detaining them as long as he pleased. Having made an inquiry into the ancient powers of the crown, before these powers had been vitiated by the tyrannical Tudors, they embodied the result in what was called a *Petition of Right*. With great difficulty Charles was prevailed on to give his sanction to this bill (1628) ; but soon afterwards his dispute with Parliament ran to such a height that he dissolved it in a fit of indignation, resolving nevermore to call it together.

124. For some years Charles governed the country entirely as an irresponsible despot, levying taxes by his own orders, and imprisoning such persons as were obnoxious to him, in utter defiance of the *Petition of Right*. How long the English people would

have borne the tyranny it is impossible to say: events soon occurred that precipitated a struggle. The Scots, whom Charles had roused to revolt by trying to force on them the liturgy of the Church of England, crossed the border in arms, and then it became necessary to summon Parliament.

125. In 1640 the memorable assembly known in history as the *Long Parliament** came together. Action of the Long Parliament. They resolved to curb the royal power and remove the grievances under which the nation had groaned for the past eleven years. The king himself at last saw that the torrent was irresistible, and resolved, though too late, to give way to it. By the *Triennial Bill* it was enacted that there should be a Parliament at least every three years. Strafford and Laud, who were blamed as the authors of the king's obstructive policy, were brought to the block. The court of "Star-Chamber" was abolished. Finally a bill was passed declaring that Parliament should not be dissolved without their own consent.

126. By the month of November, 1641, all the abuses of which complaint had been made were removed; and as the king by his concessions The situation in 1641. had gained many friends, it seemed that all the troubles were now at an end. But it is the nature of a revolutionary movement that it gains as it goes on. The leaders of the Opposition, still distrustful of the king's sincerity, resolved that they would have a guaranty for the future. They accordingly passed in Parliament a measure called the *Remonstrance*, setting forth all the faults of the king's government, and expressing the distrust with which his policy was still regarded.

127. That the Radicals were right in their judgment of the temper of the king was soon made manifest by a despotic act committed by him. The explosion comes.

* So called because it sat for more than thirteen years.

Early in 1642 Charles, in order to overawe the refractory Commons, demanded the surrender of five of the most troublesome members on a charge of treason. They were not given up, and on the following day the king went to the House, accompanied by a considerable number of armed men, to seize them. They were, however, designedly absent. This violation of the Constitution alarmed the Commons. There was great indignation against the king, for he had insulted the nation. He left the capital and went to York.

128. For some months messages passed between the king and the Parliament; but there was no desire to yield on either side. At last the Parliament demanded that he should give up the command of the army. He refused, and CIVIL WAR became inevitable.

129. On the side of the king were the nobles, the clergy, and a majority of the country gentlemen. We may call these the Royalists; but in that time they received the name of *Cavaliers*. On the side of Parliament were the tradesmen and shopkeepers of the towns, the yeomanry, a considerable number of the country gentlemen, and a few of the nobility. The Opposition, or Parliamentarians, were called in derision *Roundheads*, from the Puritan fashion of wearing closely cropped hair.*

130. On the 25th of August, 1642, the royal standard was unfurled at Nottingham. In the following month the opening battle was fought at Edgehill; and, though indecisive, it enabled the king to approach London and produce considerable alarm. He then retired to Oxford, and negotiations were entered into which proved unavailing. From Edgehill (1642) to Colchester (1648) we may count six years of strife, and the names of the princi-

* Perhaps we may regard the *Whigs* and *Tories* who sprang up in England in the following century, as well as the *Liberals* and *Conservatives* of modern England, as in some respects the representatives of the principles of the *Roundheads* and *Cavaliers* respectively.

pal actions will be found in the note below.* During the first two campaigns the Royalists were generally successful; but after that, and especially onward from Marston Moor, the Roundheads were victorious.

131. The first leader on the side of the Roundheads was the Earl of Essex; but a greater than he was soon to appear. At Edgehill a captain of horse named Oliver Cromwell had fought in the army of the Parliament. He was then about forty years of age (born 1599), and had up to that time lived a peaceful country life in Huntingdon. As a member of the Long Parliament he was known chiefly as a man of homely manners, slovenly dress, and rough-and-ready speech.

132. Cromwell had been captain of a troop of horse at Edgehill; after that he became a colonel of cavalry. He put his regiment under the severest discipline, and soon Cromwell's "Ironsides" became famous.

* The following table exhibits the leading battles of the Civil War:—

P. means Parliamentary; R. means Royalist.

NAME.	DATE.	RESULT.
Edgehill	1642	<i>Indecisive.</i>
Reading (siege)	1643	<i>P. victory.</i>

Bridgewater (siege)	1645	<i>P. " "</i>
Bristol (siege)	1645	<i>P. " "</i>
Pembroke	1648	<i>P. " "</i>
Colchester	1648	<i>P. " "</i>

After two or three years the army was remodeled ; and then, though Sir Thomas Fairfax was appointed commander-in-chief of the Parliamentary forces, yet the real captain was Cromwell, who received the rank of Lieutenant-General. Then was organized that army, — the most wonderful ever seen, and the very embodiment of Cromwell's own fervent Puritan soul,—composed of stern, religious men, who prayed when they did not fight, and who, marching to battle with the singing of psalms, scattered like chaff the licentious and roistering Royalists. Naseby (1645) was the decisive battle of the war ; for there the king was so completely beaten that he and his party could no longer keep the field.

133. Meantime the Puritans had become divided into two parties: the one, called *Presbyterian*, and consisting of the majority of Parliament, was desirous only of limiting the power of the king ; the other, called *Independent*, and embracing the leaders of the army, was bent upon the destruction of the throne. Cromwell became the leader of the Independents.

134. After the disaster of Naseby the king fled to the Scots, who, however, gave him up to Parliament ; but Cromwell caused Charles to be seized and confined as a prisoner at Hampton Court. Much negotiation now went on between the king and the two parties, and indeed at one time a satisfactory arrangement was made between Charles and the Parliament for the settlement of all difficulties. This alarmed the leaders of the army ; and under the direction of Cromwell measures were taken to clear the House of Commons of all members opposed to their plans. For this purpose Colonel Pride, with an armed force, barred the door of the House of Commons, and thus prevented the entrance of more than a hundred members opposed to the army party (December, 1648). This high-handed act was called *Pride's Purge*. The remaining fifty or sixty members, all of whom were Independents, received the nickname of the "Rump."

135. This remnant proceeded to nominate a High Court of Justice for the trial of King Charles. The court sat in Westminster Hall, and Charles was brought to the bar January 20, 1649. The king entered a dignified protest against the right of the court to try him. This, however, availed him nothing; lengthy evidence was given, and on the 27th he was condemned to execution as a "tyrant, traitor, murderer, and public enemy."

136. The sentence was carried out January 30, in front of the banqueting-hall of Whitehall Palace. Soldiers surrounded the black scaffold, on which stood two masked headsmen beside the block. Even at the last moment, with "the ruling passion strong in death," the king declared that the *people had no right to any part in the government*. He then calmly placed his head on the block and gave the signal. One blow, and all was over; and the executioner, raising the dripping head of Charles Stuart, cried out, "This is the head of a traitor!"

137. The execution of Charles, the first and only king of England that has died on the scaffold, was utterly unconstitutional. The one right and open course would have been to depose him, for he had violated his Coronation Oath. But this was not a time for calm measures, when the nation was in the throes of a revolution, and the king fell a victim to the spirit of the age, which he obstinately refused to understand.

138. The Parliament now governed England, and established a republic under the title of THE COMMONWEALTH. It lasted for eleven years, which years may be divided into two periods: 1. From Charles's death to the appointment of Cromwell as Lord Protector; 2. The Protectorate of Cromwell.

139. During the first period the executive power was intrusted to forty-one members, but even under this arrangement Cromwell was the actual head.

Trial of the king.

His execution.

Verdict on his execution.

The Commonwealth.

Events of the first period.

He acted with astonishing vigor. He led an army into Ireland, and rapidly overran and conquered the whole country. The people of Scotland having proclaimed Charles II. king, Cromwell invaded and reduced that kingdom also. Charles entered England with a Scottish army; but the battle of Worcester (1651) put an end to his hopes. The Dutch becoming insolent, he chastised them, and forced their ships to strike their flag to the English.

140. At home Cromwell found himself surrounded by many difficulties. And the most troublesome of these were caused by jealous and discontented Puritans in Parliament. So one day in April, 1653, he went to the Parliament House, and said, "Get you gone, and give way to honester men." He stamped on the floor; musketeers stationed without poured in, the hall was speedily cleared, and Oliver, locking the door, carried off the key. In this forcible way was the Rump Parliament dissolved.

141. Under the direction of Cromwell a new Parliament, known as "Barebone's Parliament,"* was called. But after sitting a short time they resigned their power into the hands of Cromwell, bestowing upon him the title of *Lord Protector of the Commonwealth*. He was king in all but name, and indeed had more power than any king since Henry VIII.

142. In the government of England Cromwell ruled as a despot. To insure the maintenance of his authority the whole country was divided into eleven districts, and each placed under the command of a major-general with almost unlimited power. Resistance was hopeless; men were fined and imprisoned contrary to law, and some were sent as slaves to Barbadoes.

143. The Protector's foreign policy was as vigorous as

* So called from a London currier named Barebone, who was a leading member of it.

his home government. He made England honored and feared. He vanquished the Spaniards by land and sea, and took from them the island of Jamaica. He dictated peace to Holland. He united the Protestant states of Europe, and forced the Pope himself to moderate the religious zeal of Catholic princes.

His foreign
policy.

144. Cromwell's latter days were clouded with many cares and fears. Royalists, Presbyterians, and disappointed republicans plotted against him, and he was in constant dread of assassination. Anxiety and fear at last wore out his strength, and an ague carried him off in the sixtieth year of his age (September 3, 1658), on the anniversary of his decisive victories of Dunbar and Worcester.

Last days and
death.

145. In his person Oliver Cromwell was of a coarse and heavy figure, about the middle size. His eyes were gray and keen, his long nose was of a

Character of
Cromwell.

CROMWELL.

deep red. It is a characteristic trait that when a painter, wishing to flatter him, represented the Protector without a wart which deformed his face, he angrily told the artist, "Paint me as I am!" Yet within this rugged frame there burned a great and heroic soul. He had military talent of the highest order; but he was more than a mere soldier: he was an iron

character, a man of terrible, fiery earnestness, fitted by Divine Providence for the awful yet necessary part he had to play in the history of England.

146. Richard Cromwell, son of Oliver, succeeded by his father's appointment to the protectorate; but he was wholly unfit for the position, being a gentle, modest soul. Realizing his own deficiencies, he resigned the office in five months. Then followed an inter-

Events to the
Restoration.

val of great confusion, in the midst of which it was clearly seen that the English people were leaning towards their exiled sovereign, Charles II. He was accordingly invited back to his native land, and returning, he was proclaimed king in May, 1660.

147. The *Restoration*, as it is called, was hailed with transports of joy, — the joy of a people who loved order and hated anarchy. Yet a people may purchase order at too dear a price, and this fact soon received a striking illustration in England. The nation, without imposing any terms on the new sovereign, trusted implicitly to his good disposition. Charles II. soon showed his true character: though humane and amiable, he was indolent, prodigal, and licentious, unfitted either to support the national honor abroad, or to command respect at home.

148. During the greater part of his reign Charles II. made few inroads on the Constitution and laws. It is true that he issued Declarations of Indulgence, removed incorruptible judges, sanctioned excessive fines and punishments, and published proclamations on his own authority. But these measures were so feeble and few compared with those of his father, and they were counterbalanced by so many excellent laws conducive to freedom, that they excited little opposition; and the dislike with which the king soon came to be regarded sprang, not from these illegal measures, but from his disgracefully licentious manner of life, and the mean acts to which he resorted to procure money.

149. Towards the close of his reign he governed without a Parliament, under the influence of his brother,* and was guilty of acts as tyrannical and monstrous as any committed by his father. His conduct during these last years shows him to have been as

* The Duke of York, afterwards James II.

despotically inclined as any of the Stuarts ; and there seems little doubt that only his being steeped in vicious and idle pleasures during the greater part of his reign prevented his being the most arbitrary monarch of his line.

150. Under the austere Puritan rule of Cromwell sculpture and painting had been almost banished from the land, as savoring of idolatry. Then, too, all public amusements, especially theatrical performances, were forbidden, and even the innocent sports around the May-pole and by the Christmas-fire were sternly put down. Puritan austerity.

151. The nation, released at the Restoration from such restriction, plunged wildly into the opposite extreme. The king's libertine example was imitated, and morals became very corrupt. Members of Parliament sold their votes, as a matter of course. The plays written then, in which for the first time female performers took the female parts, are unfit to be read, so disgusting are the thoughts and the language. The power of even the Church was but feebly exerted to stem this torrent of wickedness. Manners under Charles II.

152. On the other hand, it may be noticed that the English during the reign of Charles II. advanced considerably in material prosperity. Navigation and commerce were encouraged. Manufactures of brass, glass, silk, hats, and paper were established. The post-office, set up during the Commonwealth as a means of raising money, was advanced in this reign. Roads were greatly improved, and stage-coach traveling was commenced, though not carried to any great extent. During this reign tea, coffee, and chocolate were first introduced. In 1660 the Royal Society was established in London, for the cultivation of natural science, mathematics, and all useful knowledge. Progress of England.

153. In 1685 Charles II. died, and was succeeded by

his brother, the Duke of York, who received the title of
Sketch of James II.'s reign. James II. His reign was brief and inglorious. James II. was a man of one idea,—that of making Catholicism the national faith. The Roman Catholics at this time were not the hundredth part of the nation, yet the king believed he could bring back the old religion, and to this end alone he directed the exercise of that prerogative to which he clung with Stuart-like tenacity. The efforts of James were for some time attended with success ; but at last they disgusted both Whigs and Tories, and both parties united in inviting over William, Prince of Orange, to deliver the nation. William was the grandson of Charles I., and nephew and son-in-law of James II., being married to that king's daughter Mary, known in history as Mary II.

154. He accepted the invitation ; and collecting a large
William of Orange and James. fleet and force, landed on the coast of England, 1688. James did not perceive the storm that was gathering around his head, until William had landed. It was in vain that the king now turned himself to the army and the people, and promised the removal of every measure repugnant to the Constitution. When a part of the army went over to William, and the general voice declared itself against the king, James sent his wife and son to France, threw the Great Seal into the Thames, and then fled himself in despair from the land of his fathers. He lived from this time forth at St. Germain, a pensioner of Louis XIV.

155. After the flight of James the representatives of
Throne declared vacant. the English people declared the throne vacant, and agreed that the Catholic line of the House of Stuart should be excluded from the government, and that this should be placed in the hands of the royal pair, William III. and Mary II. Instructed, however, by the past, they secured the liberties of the nation against any future arbitrary acts by the *Bill of Rights*.

156. Such was what the English people call the "Glorious Revolution of 1688." And indeed it is not unworthy of the name; for it presents a ^{Benefits of the Revolution.} striking example of the salutary power of public opinion directed by wisdom and aiming at just and worthy ends. By the Bill of Rights the British Constitution now became, in many important points, fixed and determined. This act secured by guaranties all the old English liberties which the Stuarts had violated. It was a triumph of the People over Kings. It destroyed at one blow and forever the false and pernicious doctrine that the royal prerogative is something more sublime and holy than the fundamental laws of the realm. It laid the sure basis of the stability and the prosperity of England.*

157. The Revolution was accomplished; but James did not yield without a struggle. Of this, Ireland ^{Hostile efforts of James.} was the chief scene. Besieging Londonderry in vain, he was signally defeated at the Boyne in 1690; and, utterly dispirited, he hastened to return to France.

158. The death of Mary in 1694 left her husband to rule alone. This he did by prudently conceding a good deal to the Parliament, provided that they ^{Career and death of William.} gave him money to carry on the war with Louis XIV. (Of this we shall have an account under the *Age of Louis XIV.*) The treaty of Ryswick brought the struggle to an end in 1697. A second war was in preparation when William died (March 8, 1702), in consequence of a fall from his horse.

* Some of the most important articles in the Bill of Rights are the following: 1. The king cannot suspend the laws or their execution. 2. He cannot levy money without the consent of Parliament. 3. The subjects have a right to petition the crown. 4. A standing army cannot be kept up in time of peace but with the consent of Parliament. 5. Elections and parliamentary debates must be free, and parliaments must be frequently assembled.

159. William was a prince of commanding ability, particularly in military affairs. His ruling sentiment was a wish to reduce the power of the King of France, and this he was able in no small degree to effect. His person was thin and feeble, and his ordinary demeanor was cold, silent, and unattractive. It was only in battle that he ever became animated or easy. He was a conscientious man, of sober and even kindly domestic habits, and sincerely attached to toleration in religion.

2. THE THIRTY YEARS' WAR.

160. The greatest event in the politics of Continental Europe during the first half of the 17th century was the famous *Thirty Years' War*, which began about 1618, and was terminated by the Treaty of Westphalia in 1648. This war had Germany for its center, and it was, properly speaking, a contest between the Catholic and Protestant princes of that country; but eventually most of the nations of Europe were drawn into it.

161. In order to understand the nature of this struggle, we must glance back to the affairs of Germany at the period of the abdication of the Emperor Charles V., the point at which our last survey of the Empire closed. Germany was at that time distracted by the political factions and quarrels of its independent princes, and by the contending sects of the Catholics, Lutherans, and Calvinists. Ferdinand I., the brother and successor of Charles V., attempted to reconcile these factions and unite the three religions, but in vain. This state of affairs was not at all changed under the succeeding three emperors down to Matthias, who was emperor in the early part of the 17th century.

162. When Matthias, who had been King of Bohemia and Hungary, was elected emperor, he had his cousin Ferdinand made King of Bohemia.

Ferdinand was intolerant towards the Protestants of Bohemia, and they rose in revolt. While the war was yet in progress Matthias died, and Ferdinand II., to the great alarm of the Protestant party, was raised to the imperial throne, 1619. But just about the time that Ferdinand II. was crowned emperor the Bohemians renounced their allegiance, and chose as their king the *Elector Palatine*, Frederick, a Protestant prince.

163. Frederick was the son-in-law of the English king, James I., and the Protestants of Bohemia in choosing Frederick trusted that he would be Defeat of Frederick. upheld by British influence and power. But this hope was frustrated by the weakness and timidity of James. The result was that in the next year (1620) Frederick was driven out of Bohemia by the imperial army, and he presently lost his own dominions as well.

164. The Emperor, blinded by his success, now determined to crush Protestantism in Germany. Narrative of the war. Wallenstein, a great general, but a most unscrupulous plunderer, was at the head of the army, and ravaged the territory of the Protestant princes. It seemed indeed that the Emperor would swallow up all Germany. But at this crisis other powers began to step in. The first was Christian IV., King of Denmark, who became the chief of the Protestant League (1625). He was able to accomplish nothing, however, and was presently forced to return to his own dominions. Then it was that a heroic figure from the North came upon the scene. This was the famous Gustavus Adolphus, King of Sweden.

165. Gustavus was a prince of the highest military and civil talents, and in every respect a noble character. He was a zealous Protestant, and had Gustavus Adolphus appears. the full confidence of the Protestant princes of Germany, who were ready to rally the moment he obtained any signal advantage. On the 20th of May, 1630, taking

in his arms his daughter Christina, then only four years of age, he presented her to the Swedish Parliament as their future sovereign, and made his farewell address. "Not lightly, not wantonly," said he, "am I about to involve myself and you in this new and dangerous war. God is my witness that I do not fight to gratify my own ambition ; but the Emperor has wronged me, — has supported my enemies, persecuted my friends, trampled my religion in the dust, and even stretched forth his revengeful arm against my crown. The oppressed states of Germany call loudly for aid, which, by God's help, we will give them."

166. Landing in Germany at the head of a small but highly disciplined army composed of moral, God-fearing men, Gustavus began his career of victory. At the same time aid came from other quarters. The great Cardinal Richelieu, then the real chief of France, made a treaty with Gustavus and helped him with money, — not that he loved Protestantism (for he was then bending all his energies to crush the Huguenots at home), but because he hated the House of Austria. England, too, though she never formally joined in the cause, lent it her moral support, and thousands of Englishmen and Scotchmen went over to enlist under the banner of Gustavus Adolphus, the "Lion of the North."

167. The career of Gustavus in Germany continued for two years, down to the time of his death (1630–1632). He defeated the imperial generals Tilly and Wallenstein, and rapidly regained all that the Protestants had lost. His last and greatest battle was at Lützen in Saxony (November 16, 1632), one of the memorable fields of history. Victory declared for the troops of Gustavus, but the heroic leader himself was killed in the fullness of his glory.

168. The Swedes were overwhelmed with sorrow, and began almost to despair of their cause ; for the successor of

Gustavus was an infant only seven years old. Fortunately, the council of regency intrusted the management of the German war to Ox'enstiern, a statesman of the highest abilities. Under his guidance the Protestant cause soon began to assume a formidable aspect ; the organization of the armies was once more completed, and the chief command intrusted to the Duke of Saxe-Weimar, a worthy successor of the great Gustavus.

169. An unexpected event soon after greatly raised the confidence of the Protestants. The Emperor Ferdinand had reason to suspect that Wallenstein meditated a revolt, and was about to use the imperial army as a means of obtaining sovereign power. Though Wallenstein's guilt was established by undoubted proof, he was too powerful in the camp to be arrested. Under these circumstances the Emperor had recourse to the disgraceful expedient of assassination ; and Wallenstein was murdered (1634) by some of his own officers, who had an imperial warrant for the crime.

170. The war now assumed a new aspect, by the fact that France under Richelieu took a direct part in the contest. In fact, it became a war for the aggrandizement of France, — and all the more so as most of the Protestant states of Germany made peace with the Emperor in 1635. Under the guidance of Richelieu and Oxenstiern the struggle went on in most parts of Europe with varying success.

171. After the death of Richelieu, in 1642, his policy of hostility to Austria was continued by Cardinal Mazarin, who succeeded to the power of Richelieu. The Emperor Ferdinand had died five years before ; so that the latter part of the Thirty Years' War went on under a different emperor and different rulers, both of France and Sweden, from those under whom it had begun.

172. In this latter part of the war the French armies,

the war.

Situation after
Richelieu.

under their great leaders, Turenne and Condé, were crowned with such success that the Emperor found it necessary to propose a treaty in order to prevent the dismemberment of Germany. After long and tedious negotiations the Treaty of Westphalia was signed at Munster, in 1648.

173. The Treaty of Westphalia is one of the most important treaties in the history of Europe. It established the religious independence of the Protestant states, and formally acknowledged the independence of Switzerland and Holland. And, what was even more important, the two foreign kingdoms that had had the chief share in the war, France and Sweden, obtained possessions within the Empire,* and also as sureties of the peace they obtained a general right of meddling in the affairs of Germany.

174. To Germany the Thirty Years' War was most ruinous. The Empire was thoroughly shattered, and became a mere lax confederation of petty despotisms and oligarchies, with hardly any national feeling. Whatever traces were left, either of authority in the Empire or freedom in the people, quite died out. Thus began that weakness and disintegration which marked Germany for the next two centuries, and from which the Teutonic Fatherland has only in our own day been lifted into unity by mighty throes.

3. THE AGE OF LOUIS XIV.

75. Before narrating the history of the age of Louis XIV. we must glance at the events that connect this age with the reign of Henry IV., the

Review of
events down
to Richelieu.

* France obtained Alsace, Brisach, Metz, Verdun, and other territories; Sweden got Upper Pomerania, Stettin, the isle of Rügen, Bremen, etc., with three votes at the Diet.

period at which we stopped in our last survey of French history. Henry IV. died by the dagger of Ravallac in 1610. His son, Louis XIII., being then but nine, the queen-mother, Mary de Medici, ruled as regent. It was a time of miserable court cabals, and France, which under Henry IV. had risen to high prosperity and splendor, sank into weakness, faction, and disorder. Louis XIII., becoming of age, assumed the government; but he was a feeble character. By the advice of his favorites he banished his mother: she took up her residence at Blois, rallied the dissatisfied nobles around her, and for two years the kingdom was kept in a state of anarchy. In the midst of these events a man came to the front who was to be the real king of France, and to mark an epoch in the history of Europe. This man was the Cardinal de Richelieu.

176. A few years before this time a quiet-looking young ecclesiastic named Armand Duplessis de Richelieu had spoken with eloquence at a meeting of the States-General, and had been appointed Bishop of Luçon. Then he became spiritual adviser to Mary de Medici; and, as it was through his tact that the quarrel between herself and her son was made up, the queen-mother succeeded in getting for him a cardinal's hat from the Pope, and in having Louis XIII. agree to admit him to the cabinet. He was only to give his opinion: he was to affect no state, to hold no levees, and to behave in all respects as a simple, humble-minded ecclesiastic. But no sooner had he taken his seat at the council-board than it was evident that the true man was found. For twenty years (1622-1642), up to the time of his death, he exercised an entire control over the king, making him, as was said, "the first man in Europe, but the second in his own kingdom."

177. Richelieu has been compared with Wolsey of England, and there are certainly points of comparison. Like him he was a prelate, a minister, a

Advancement
of Richelieu.

Comparison
with Wolsey.

consummate politician, and a master of the arts of intrigue. He gave his whole attention and all his vast abilities to affairs of state, was prodigal of display, and entertained projects of the most towering ambition. He added to his ministerial and priestly dignities the emoluments and honors of the profession of arms, assumed the title and dress of generalissimo of the French army, and wore alternately the helmet of the warrior and the scarlet hat of the cardinal. Richelieu, however, was far more crafty than the minister of Henry VIII., and more unscrupulous, while at the same time he pursued a more profound and comprehensive policy.

178. The chief domestic object of Richelieu was the crushing of the Huguenots. Alienated by persecution, they had attempted to throw off their allegiance, and establish an independent state of which Rochelle was to be capital. Richelieu laid siege to this city, which, after maintaining a most obstinate resistance for a year, during which 15,000 persons perished, was forced to surrender (1628.) By this event the civil war was ended, and the Protestant power in France finally crushed.

179. The principal aim of Richelieu's foreign policy was the humiliation of Austria. This he accomplished by giving his aid to Gustavus Adolphus in the Thirty Years' War; and after the death of that hero France took the field directly as one of the combatants of the struggle.

180. The power of the nobles was always hostile to Richelieu; but his stern resolve and deep craft thwarted all their schemes against him. When he got them in his grasp he did not spare, as Montmorency, Cinq-Mars, and De Thou — all of whom were executed for plots against him — bitterly experienced.

181. In 1642 the great Cardinal died. He had extended the glory of the French name to distant regions, com-

manded the respect of all the European powers, patronized

literature and sci-
ence, and founded the French Academy.

Five months later died the nobody who wore the crown.

182. Louis XIII. left a son who was at this time only five years old, but who, under the title of Louis XIV.

Louis XIV., inherited the throne of France.

The reign of this king

forms the main topic of this chapter. It had the extraordinary duration of seventy-two years, lasting from 1643 to 1715. It is usually regarded as one of the great periods of French history, for during this space France rose to be the most formidable power in Europe.

183. The long reign of Louis XIV. naturally divides itself into three eras: 1. The government of Mazarin; 2. The development of the ambitious policy of the king; 3. Its retribution.

Three epochs.

184. During the minority of Louis XIV. the regency was in the hands of his mother, Anne of Austria. She took as her counselor an Italian, Cardinal Mazarin, who became the guide and master, and finally the unacknowledged husband, of the weak and self-willed queen.

The regency.

185. At this time the war against Spain and the Emperor of Germany, begun by Richelieu and forming part of the Thirty Years' War, still continued. The result was glorious for the arms of France.

Part in the Thirty Years' War.

Condé, an

RICHELIEU.

illustrious general, won a series of brilliant victories over Spain and the Emperor. These victories were followed by the Peace of Westphalia (1648), which concluded the Thirty Years' War. The pacification, however, did not extend to Spain, which continued hostilities for ten years longer.

186. Though triumphant abroad, France was meanwhile in a state of civil commotion. Mazarin, the prime minister, was the object of numerous cabals, while at the same time the exhausted condition of the finances brought the crown into collision with the people. A reform party called the *Fronde* waged a civil war against the court party, from 1648 to 1653. This movement had in it promise of great good, but it came to naught, and was marked by extreme frivolity.

187. On the death of Mazarin, Louis XIV., at the age of twenty-three, assumed the direction of the government himself. The President of the Assembly of the Clergy desired to know to whom he should now address himself on business: "To myself," said Louis; and he was sole master of France until his death.

188. Louis XIV. had the discernment to choose great men as his ministers. Colbert and Louvois filled the highest offices, and put the finances, commerce, and the army and navy on an excellent footing.

189. The king wished to enlarge his empire, and to render his name illustrious by military renown. He took advantage, therefore, of the death of the Spanish king, Philip IV., to make pretensions to his inheritance as the husband of Maria Theresa, Philip's daughter, and to march an army into the Spanish Netherlands, 1667. By the triple alliance of England, Holland, and Sweden he was compelled, by the Peace of Aix-la-Chapelle (1668), to surrender, after a short campaign, the greater part of his conquests; but many of the frontier towns of Flanders remained with France, and were converted by the great engineer, Vauban, into impregnable fortresses.

190. As Holland had been the chief instrument in checking the victorious course of the haughty king, so she did not fail to experience his vengeance. Louis won Sweden to his side, and purchased the favor of the English king (Charles II.) by bribes. Thus prepared and protected on every side, Louis, in 1672, began a second war, which at first was directed against Holland alone, but in which almost all the European states were involved during the seven years of its continuance. War begins with Holland.

191. The Hollanders saw the approaching storm, and turned their eyes to a young man, the descendant of the great Nassaus, to whom they owed their deliverance from the Spanish yoke, and invited him to take the military government into his own hands. This was William, Prince of Orange, whom we have already seen as coming at a later period to the throne of England. The Dutch champion.

192. Passing the Rhine, the French army pursued a rapid course of victories into the territories of the United Netherlands. In forty days Holland was overthrown, and the French were already within four leagues of Amsterdam. De Witt, the Grand Pensionary, or chief magistrate, of the Netherlands, in despair demanded terms of peace. The Embassy was insultingly dismissed by the French king, and the people of the Hague rushed desperately to the house of De Witt and tore him and his brother Cornelius to pieces. French successes.

193. It seemed that the ruin of Holland was now complete; but the calm and resolute William of Orange ventured on a desperate yet successful measure. Better, thought he, that the sea should engulf his country than that his country should lose its liberties. He opened the sluices throughout the land. The German Ocean and the Rhine poured over all the plain, and the invading army was limited to the high grounds on which Deeds of William of Orange.

their citadels were placed. William then sent forth the Dutch fleet to meet his enemies on the sea, and the great Admiral de Ruyter met the united French and English fleets in three combats, which, though indecisive, were on the whole to the advantage of the Dutch.

194. And now from many quarters unlooked-for aid came to the Netherlanders. Shame took possession of the English Parliament at the alliance with France against a Protestant prince, and they forced the mercenary Charles II. to sign, with his nephew William of Orange, a treaty of peace, 1674. It needed but an example, and every generous heart warmed to the defender of his country. The King of Spain, the German Emperor Leopold, and the Elector of Brandenburg (now Prussia) took arms against the oppressor.

195. A grand combat of the nations, in which Louis XIV. stood opposed to half of Europe, now ensued. For four years (1674-1678) the tramp of a dozen armies shook the Rhine provinces, and Flanders and Alsace and Franche Comté. Great generals, Turenne and Condé and Montecuculi and William of Orange, put forth the mighty efforts of their genius. Success was now with the one side and now with the other, but it was not decisive with either. At length longings for peace seized on the heart of Europe. Louis himself was wearied with the struggle, which had drained the resources of his realm. Negotiations were entered into, and the war was brought to a close by the Peace of Nim'eguen, 1678.

196. The treaty was especially favorable to the interests of France, as it secured to Louis the provinces of Franche Comté, Alsace, and many of the strong fortresses and industrious towns of Flanders. Holland by the treaty recovered everything, so that Spain was the chief loser by the Peace of Nimeguen.

197. Louis XIV. was now at the height of his power,

and the municipal authorities conferred on him the title of Great. Yet in reality the grandeur of the French monarchy had culminated, for the glory of the king had been bought at too great a cost. The constant wars and the despotic home government of Louis had weakened and impoverished his kingdom.

198. A very impolitic measure was the *Revocation of the Edict of Nantes*, granted by Henry IV. for the toleration of the French Protestants.* While their worship was suppressed, their churches demolished, and their ministers banished, the Protestant laity were forbidden, under the most rigorous penalties, to quit the kingdom (1685). The government entered also on a most cruel persecution, employing *dragonnades*, as they were called; that is, raids by parties of dragoons, who were allowed full license to insult and worry the heretics till their conversion was obtained. The result was, that, in spite of the penalties, crowds of Huguenots continued to escape from France, which thus lost 500,000 of her most industrious and useful subjects.

199. The Revolution of 1688 brought the Dutch Stadtholder, William of Orange, to the throne of England. He had been the persistent enemy of Louis, and being now at the head of a great nation, he had a very formidable backing. King William became the soul of a general league, called the *Grand Alliance*, which was now made against the aggressions of Louis.

200. The war went on almost everywhere at once, and many battles were fought and towns taken on both sides, especially in the Netherlands. It was at last ended by the Peace of Ryswick (1697), which retrenched some of the unjust conquests of Louis XIV. on the Rhine and in the Netherlands, and recognized William III. as the lawful sovereign of England.

* See p. 338.

201. Another great war in which Louis was the moving spirit broke out in the year 1701. This is called the *War of the Spanish Succession*. The manner in which it originated was as follows. The King of Spain, Charles II., died in the year 1700, leaving no children, but leaving a will by which he bequeathed the succession of his house to a grandson of Louis XIV., named Philip of Anjou. This at once alarmed the nations of Europe as a menace to the Balance of Power, for Philip of Anjou was a mere boy. The astute and ambitious Louis XIV. would himself be the real ruler, and the close union of two such kingdoms as France and Spain was greatly to be feared.

202. Accordingly the German Emperor and William III. of England united with Holland and Prussia to prevent Philip's wearing the crown of Spain. They supported the claims of the Archduke Charles, second son of the German Emperor, as King of Spain. William III., who was the head of the coalition, died in the midst of his hopes and preparations ; but two men rose in his place, — one the greatest general except one in the annals of England, John Churchill, Duke of Marlborough ; the other, Prince Eugene of Savoy, who headed the armies of the Emperor.

203. This War of the Spanish Succession lasted for thirteen years (1701 – 1714), and resulted in the humiliation of Louis XIV. The French king was defeated in all his plans. Marlborough sent his marshals in headlong flight from Blenheim, Ramillies', Oudenarde, and Malplaquet. Gibraltar was wrested forever from Spain and attached to England. The French fleets were burned at Vigo, and Toulon was besieged by sea and land. Prince Eugene in the mean time crushed the French power in Italy and approached the boundaries of France. Domestic sorrow, too, came to Louis. His only son died, then

two of his grandsons ; and nobody remained in the direct line of succession to the old man of seventy-four but a great-grandson, then a child in arms.

204. Nevertheless, Louis succeeded so far that he established Philip of Anjou on the throne of Spain ; and the way in which, after so many defeats, this came about is rather curious. The allies were contending with France to set the Archduke Charles of Austria on the throne of Spain, in order to prevent too close a union between Spain and France. Now, in the thirteenth year of the war the Emperor of Germany died, and the Archduke Charles became Emperor. If he were made King of Spain while at the same time German Emperor, would not the Balance of Power, about which the allies were so anxious, be still more daringly menaced ? Accordingly Louis XIV. was surprised to find his nomination of Philip to the Spanish crown suddenly ratified by England and Holland. The chief point was conceded, and Philip V. became the first of the Bourbon line in Spain. The treaties of Utrecht (1713) and of Rastadt (1714) terminated the war. The next year Louis XIV. died.

205. During the last thirty years of the reign of Louis XIV. France stood at the culminating point of her power abroad and of her prosperity at home, so that the flattering chronicles of those days described the period of *Louis Quatorze* as the golden age of France. Trade and industry received a prodigious development by the care of Colbert ; the woolen and silk manufactures, the stocking and cloth weaving, which flourished in the southern towns, brought prosperity ; the maritime force increased ; colonies were planted ; and the productions of France were carried by trading-companies to all parts of the world.

206. In this age also the court of France displayed a magnificence that had never before been witnessed. Sump-

tuous buildings, costly libraries, splendid literary produc-
 tions, vast establishments for the natural sci-
 ences, academies and similar institutions, ex-
 alted the glory and renown of the Great Monarch. The
 refined air of society, the polished tone, the easy manners
 of the nobility and courtiers, subdued Europe more per-
 manently and extensively than the weapons of the army.
 French manners and fashions bore sway from this time in
 all the higher circles of society, and the French language
 and French style attained supremacy in Europe.

207. Nevertheless, it was not a period which any one
 who loves the greatest of all things, political
 liberty and the true virtue of nations, can re-
 gard with unmixed satisfaction. We must, in summing up
 the Age of Louis XIV., carefully guard against the false
 political philosophy that would teach us to judge an epoch
 by its mere external glitter. For beneath the polish and
 veneer was utter rottenness. The government, though tem-
 pered by courteous manners and superficial polish, was an
 Oriental despotism, and Louis XIV. himself summed up
 all the political characteristics of the reign in one signifi-
 cant sentence, "I am the State" (*L'État c'est moi*). The
 means to carry on the great and often unjust wars whose
 victories are cited as the ground of our admiration, were
 raised by a severe and unequal taxation that pressed heavily
 on the cultivators of the soil. Under a flimsy veil of pro-
 priety and *politesse*, the morals of society were exceedingly
 corrupt. The literature of the age was brilliant, but it was
 at the same time servile. Louis put the muses into his liv-
 ery, as he had already done with the nobility, and artists and
 authors took his wages to cover him with official adulation.

208. The great characteristic of the age, in fact, is its
 artificiality, which pervaded everything, — lit-
 erature, conversation, manners, life. The king
 himself wore red heels to his shoes, four inches high, which

The court and

 of the age.

Its artificial-
 ity.

addition was supposed to make his stature something very imposing. And so when he danced in public, and stalked across the scene, rolling his eyes and turning out his toes, it was thought the sublimest spectacle on earth ; and all the gentlemen of France then walked with a strut, and stuck out their elbows, and tied themselves in at the waist. The whole reign was a spectacle, a theatrical display with grand machinery, and calculated to excite astonishment ; — and the justest praise that can be given to the *Grand Monarque* is in the sentence of Bolingbroke, who pronounced Louis XIV. “ the best *actor* of majesty that ever filled a throne.”

4. PROGRESS OF CIVILIZATION.

209. The 17th century is one of the most active and progressive periods in the intellectual history of Europe. A great revival had begun in the previous century, and in this century it was carried forward in great scientific discoveries, in striking improvements in philosophy, in powerful literatures, and in a general advance in the condition of the people.

Character of
the century.

210. In philosophy the most notable change was the substitution of the modern method of *inductive inquiry* for the barren and fruitless method of reasoning which had come down from Aristotle to the schoolmen, and which consisted in *assuming causes* instead of interrogating Nature herself. The name of Bacon is associated with the new philosophy, which, indeed, is often called the Baconian method. But Bacon was not so much the author of the change as an evidence that the change had taken place.

Bacon and his
philosophy.

211. The man to whom the new philosophy was perhaps more indebted than to any other was the French philosopher Descartes [*dā-cart'*]. He found uncertainty and doubt everywhere, and gave

Descartes.

himself to the study of certainties by *universal doubt*; not nursing doubt as a skeptic, but striving to arrive at truth by dismissing all prejudices. He then starts from this fact, — *I think*; or, as he expresses it, *Cogito, ergo sum*.^{*} Then, *I exist, not of my own will, but from some source out of myself*. Then, *I cannot come from any source less perfect than my own ideas of perfection*, etc.

212. A still bolder course was pursued contemporaneously by a Jew of Holland, Spinoza, who by a method akin to geometrical demonstration proved that there must be only one "Infinite Substance," of which all the various forms of existence are but emanations. Ignorant and uncharitable persons have been accustomed to call him an atheist, and speak evil of him; but he was one of the most virtuous and self-denying of men. While speculative philosophy has any interest for the race, his works will be a wonder which thinkers will consider carefully as one of the grandest and, in many respects, most appalling creations of human genius.

213. In astronomy Galileo led the way, in the early part of the 17th century, by the discovery of the satellites of the larger planets and their motions. Then a greater genius followed: Kepler earned for himself the title of the "legislator of the heavens," by investigating with enormous labor three of the great laws that regulate the motions of the planets. Newton came after Kepler, and completed his work. He demonstrated the theory of universal gravitation, a principle which solves the chief phenomena of nature and connects and regulates the whole material universe. His theory of light and colors is the foundation of the science of optics, and his *Principia* the basis of all natural philosophy, or physics.

214. Newton was also the discoverer of that most power-

* "I think, therefore I am."

ful instrument of mathematics, the *Calculus*, which he called *fluxions*, — though it is a curious fact that Leib'nitz, a German philosopher of universal genius, discovered this method *independently* about the same time. Newton and Leibnitz.

215. The discoveries in astronomy led to improvements in navigation. Napier abridged calculation by the invention of logarithms. The Florentine physicist, Torricel'li, laid the foundation of hydraulics, and invented the mercurial barometer. Otte Guericke [*ger'ik-ka*] invented the air-pump. In 1628 Harvey published his discovery of the circulation of the blood, having spent nearly twenty years in collecting facts to establish his theory. Other great names.

216. The English Royal Society, which originated from private meetings of the English philosophers, was incorporated by Charles II. in 1662, and greatly contributed to the advancement of the sciences and the useful arts. Scientific societies. The French Academy of Sciences was instituted in 1666 by Louis XIV., and similar institutions were founded in most of the countries of Europe. These societies did much for physics and chemistry. Brandt, an alchemist, discovered phosphorus in 1677.

217. The progress of literature in the 17th century was equally remarkable with that of science and philosophy. And here the French showed the greatest advance. French drama. The French drama was the creation of the Age of Louis XIV. Corneille' and Racine' brought French tragedy to its highest elevation. Corneille has more grandeur and sublimity than his rival, who excels him in the tender and pathetic. The comedies of Molière [*mol-le-êr'*] are among the finest productions of wit ever composed.

218. The French pulpit oratory of this century can boast several unrivaled names. Bossuet [*bos-su-ā'*] was a universal genius and spirit-stirring orator; Other writers. Mas'sillon and Bourdaloue' were reckoned the greatest

of French preachers; Fénelon, the author of *Télémaque*, was an admired pastor. Pascal was a mathematician when a child, and was famous in many sciences before he had attained manhood. His *Provincial Letters*, directed against the Jesuits, are reckoned masterpieces of witty argument, and he is characterized by Bayle as "one of the sublimest spirits of the world." The other French writers of eminence are Rochefoucauld [*rōsh-foo-kō*], the author of the well-known keen and witty *Maxims*; Boileau [*bwah-lō*], the critic and writer of satirical poems; and La Fontaine, the modern Æsop, and author of the most delightful fables ever written.

219. English literature continued to flourish in all its splendor during the first half of the 17th century. Shakespeare died in 1616; but he was followed by Ben Jonson and Fletcher and Massinger. The period of civil war was not favorable to literary progress, but still there were many writers of undying fame even in those days of strife. In verse Milton produced his great epics; Jeremy Taylor shone in prose; and Bunyan, the "Dreamer of Bedford," gave to the world his famous allegories. The period following the Restoration produced many dramatic writers, of whom John Dryden was the prince. The stage literature of the epoch was, however, marked by great licentiousness. Butler, the author of *Hudibras*, shines as a humorous and satirical writer.

220. In art, though the 17th century showed rather a falling off from the epic grandeur of the previous century, yet there are not wanting illustrious names. At this period it is, strange to say, the Netherlanders that lead in art. Rubens, born in the previous century, was the greatest painter of the Flemish school, and specially famed for his coloring and bold execution. Rubens's famous pupil, Vandyck, was a native of Antwerp, but was naturalized in England, where he lived the larger

part of his life, painting those portraits that hand down to us the faces of most of the beauties of Charles I.'s court. The third great name of the Flemish school is Rembrandt, who excelled particularly in color and the effects of light and shade.

221. Of the Spanish painters Murillo was the most celebrated during this period. The land of Michel Angelo and Raphael could during Other painters. this century produce no greater name than that of Salvator Rosa, a second-class artist. England had but little native art, though we may mention the name of Sir Christopher Wren, the architect of St. Paul's Cathedral.

222. The social condition of the European nations during the 17th century is a subject so large and diversified, that we shall confine our attention Europe in the 17th century. to that people in which we are most directly interested, namely, the English people.*

223. The country "gentlemen," now a polished and important class, were then rough and poorly educated. Seldom leaving their native country, English gentry and clergy. even for London, they spent their days in field sports or in attending the neighboring markets, and their evenings in drinking strong beer. The ladies of the family, whose accomplishments seldom rose above the baking of pastry or the brewing of gooseberry-wine, cooked the meals of the household. In the evening they amused themselves by sewing and spinning. The country clergy stood low in the scale. In most mansions there was a chaplain, or, as he was often called, a Levite, who, receiving his board and \$50 a year, was no better than an upper servant. When he married, his wife was usually selected from the kitchen of his patron.

* The details here given are derived chiefly from the well-known third chapter of *Macaulay's History of England*, which should be read in full for a vivid picture of English life in the 17th century,

224. The yeomen, or small farmers, were numerous and influential. It is estimated that under the Stuarts one seventh of the whole population of England cultivated lands of their own. Men of this class were characterized by a spirit of independence and a leaning towards Puritanism, and they formed the strength of the Roundhead armies. Since then very many of the small freeholds have been bought up by large proprietors, and the English yeomanry of the present day are, in consequence, much less independent in political matters than the same class of men in the 17th century.

Laboring
classes.

225. Of the laboring classes we know little. Four fifths of them were employed in agriculture, at wages averaging from four to six shillings (English) per week. A mechanic, as late as the reign of Charles II., worked for a shilling a day, but oftentimes he was compelled to take less. The chief food of the poor was rye, barley, or oats. Rude ballads were their only means of complaint, and in these they poured forth their woes. The "poor-rate" was the heaviest tax, for the paupers amounted to no less than one fifth of the community.

Brutality of
the people.

226. In the English people there seems to have been a remarkable vein of coarseness and brutality; nor is this wonderful when the practice of every-day life is considered. Masters beat their servants; husbands beat their wives daily. Teachers used the lash as the principal means of imparting knowledge. The mob rejoiced in fights of all kinds, and shouted with glee when an eye was torn out, or a finger chopped off, in these savage encounters. Executions were favorite public amusements. The prisons were constantly full, and proved to be fruitful nurseries of crime.

Costumes of
Cavalier and
Roundhead.

227. To describe the various costumes and manners of the period would be impossible within brief compass, — so a few points on each head must

suffice. The Cavalier and the Roundhead present a striking contrast in their dress and habits. The Cavalier costume consisted of a tunic of silk or satin with slashed sleeves ; a rich lace collar adorned the neck, and a short cloak hung gracefully over one shoulder. Short full drawers, or trousers, almost reached the top of the wide boots, which came half-way up the calf of the leg. A broad-brimmed beaver, adorned with a rich band and a plume of feathers, covered the head. The hair hung in curls over the shoulders, and the beard was trimmed to a point, while the love-locks were tied up with a pretty colored ribbon. The Puritan Roundhead wore a cloak of sad-colored brown or black, a plain collar of linen laid carelessly down on the plaited cloth, and a hat with a high, steeple-shaped crown over his closely clipped or lank straight hair.

228. With regard to the ladies' dresses, the farthingale and stiff ruffs of the Elizabethan period gave way, under Charles I., to flowing skirts, and falling collars edged with lace. The costumes of the court of Charles II. were something of the same style, but the dress was worn indecently low. An improvement in the latter respect was made after the Revolution of 1688. Then, too, began the fashion of looping up the skirts to show the rich underclothing, and the custom of wearing the hair combed up like a tower. Both these fashions disappeared at the close of the period, when curls and the old farthingale, under the name of the hoop-petticoat, came again into use.

229. The means of communication between one place and another were very deficient. The roads were in a most wretched state, and canals were scarcely yet thought of. In wet weather it was almost impossible to get along the highways in any kind of carriage. The rich traveled in their own coaches, but six horses at least were required to overcome the badness of the roads. The post-bags were carried on horseback at the

rate of five miles an hour; but in many country places letters were delivered only once a week. The erection of toll-gates in 1663 was the first step towards improving the means of transit. Bad roads and conveyances were not the only drawbacks to traveling in this period. Mounted highwaymen infested all the most frequented ways, and it was not safe even for a public coach in broad day to pass certain places unless the passengers were well armed.

230. The state of culture and education was very low.

Culture and
education.

There was nothing equal to our modern newspaper, and there were few printing-presses in the country except in London and at the Universities. Books were therefore scarce and dear. Female education was at a very low point, and the most accomplished ladies spelled their letters very badly.

231. Those great branches of manufacturing industry

Industries.

which now form the wealth of England were then in their infancy. The woolen manufacture was the leading industry, though the silk manufacture began to attract attention during this period. The linen manufacture was chiefly a domestic employment; the cotton-trade was almost unknown. The mineral wealth of the country was quite neglected, and not until the close of this century did it begin to receive some attention.

GREAT NAMES OF THE SEVENTEENTH CENTURY.

PHILOSOPHERS AND SCIENTISTS.

Francis Bacon (1561–1626), the greatest of English philosophers — is called the founder of the *Inductive* system of philosophy (as opposed to the Deductive or Aristotelian system); for, though it was applied before his time, he was the first to put the method in philosophic form — his great works, the *Novum Organum* and the *Advancement of Learning*; but the book by which he is best known is his *Essays*.

LORD BACON.

Descartes (1596–1650), a great French philosopher — was brought up for the army, but abandoned the profession and retired to Holland to study philosophy — was tutor of Queen Christina of Sweden — had a great influence on the method of philosophizing in the 17th century.

Hobbes (1588–1679), a famous English philosopher — was early associated with Galileo and Descartes — he partly educated Prince Charles — was a “freethinker,” but not a deist or atheist — chief works, the *Leviathan* and the *Behemoth*.

Kepler (1571–1630), an illustrious German mathematician and astronomer — he discovered what are known as Kepler’s “Three Laws,” which laid the foundation of mathematical astronomy — one of the greatest thinkers of any age, combining the inspiration of a prophet and poet with the method of a mathematician — passed most of his life in great poverty.

Harvey (1578–1657), studied medicine at Padua, England having no schools for the purpose — in 1615, as lecturer at the College of Physicians, he first announced his discovery of the circulation of the blood.

Spinoza (1622–1677), of Jewish birth — one of the great modern philosophers — much persecuted for his inquiring and skeptical turn of mind — led a very simple and virtuous life — his philosophy is very profound, and his greatest work is *Ethica More Geometrica Demonstrata* (“Ethics Demonstrated by Geometric Method”).

Isaac Newton (1642–1727), professor of mathematics at Cambridge — discoverer of the law of universal gravitation — remarkable also for his optical discoveries — chief work, *Principia*, a Latin treatise on natural philosophy.

Leibnitz (1640–1716), a jurist, historian, mathematician, and metaphysician — the most learned of modern philosophers, and the founder of the eclectic system of German philosophy.

ARTISTS.

Rubens (1577–1640), born in Westphalia, but son of a Dutch refugee from Antwerp — destined for a lawyer, but was a painter by nature — his industry resulted in four thousand pictures and sketches, and his wealth was immense — as a painter of portraits and historical scenes was almost unrivaled — most famous pieces, the *Descent from the Cross*, the *Last Judgment*, *Peace and War*, etc.

Vandyck (1599–1641), son of a glass-painter — pupil of Rubens — went to England in 1632 — celebrated for his portraits — those of Charles I. and Strafford very fine — best historical picture, *The Crucifixion*.

Rembrandt (1606–1669), a native of Leyden, and one of the most original and able painters that ever lived — excelled particularly in color and the effects of light and shade, but shows lack of refinement in his figures.

Poussin (1594–1655), born at Andely in Normandy — a great painter — among his works are the *Death of Germanicus*, the *Taking of Jerusalem*, and the *Last Supper*.

Murillo (1618–1682), one of the most celebrated Spanish painters — his early pictures are taken from humble life, as beggar-boys, flower-girls, etc. — his later productions are religious pieces, as Madonnas, holy families, etc. — died of a severe fall whilst engaged in painting the interior of a church.

WRITERS.

Ben Jonson (1574–1637), in early life a soldier — then an actor — poet-laureate under James I. — author of fifteen plays extant, chiefly comedies, and numerous masques — earliest comedy, *Every man in his Humor*.

Calderon (De la Barca) (1601–1681), a distinguished Spanish dramatist — born at Madrid — wrote about five hundred pieces.

Corneille (1606–1684), a great French dramatist — born at Rouen — made his fame by his tragedy of the *Cid* — other great works, *Horace* and *Cinna*.

John Milton (1608–1674), the greatest epic poet of modern times — Latin secretary to Oliver Cromwell — author of *Paradise Lost* and *Paradise Regained*, which were written in poverty and blindness —

numerous masques and sonnets came from his pen—wrote also in prose—his genius remained unnoticed under the Stuarts.

Samuel Butler (1612–1680), son of a Worcestershire farmer—author of a mock-heroic poem called *Hudibras*, which was a famous satire upon the Puritans.

Jeremy Taylor (1613–1667), an English bishop after the Restoration—wrote on theology—author of *Liberty of Prophesying*, *Holy Living*, *Holy Dying*, and many other works—his style distinguished for its ornateness and splendor of imagery.

La Fontaine (1621–1705), a French poet and fabulist—lived a quiet, lazy life in patrons' houses—chief works, his *Fables*.

Molière (1622–1673), a distinguished French dramatist and writer of very charming comedies—among his many works, *Le Bourgeois Gentilhomme*, *Le Misanthrope*, and *Tartufe* may be named.

Pascal (1623–1662), an eminent French philosopher and scientist—early displayed great aptitude for mathematics and science, but went into the Church—wrote against the Jesuits in his *Provincial Letters*—another great but fragmentary work is his *Pensées*.

Bossuet (1627–1704), consecrated Bishop of Meaux in 1681—one of the greatest pulpit orators of France.

John Bunyan (1628–1688), a tinker of Bedford—became a Baptist preacher—imprisoned twelve years for preaching—wrote in prison the celebrated *Pilgrim's Progress*.

John Dryden (1631–1700), a great English poet—made poet-laureate by Charles II.—author of numerous plays and satires in verse—chief works, *Absalom and Achitophel*, the most perfect and powerful satire in our language, *The Hind and Panther*, *Alexander's Feast*, etc.

Boileau (1636–1711), a noted French poet, remarkable for the moral tone of his writings—chief works, his *Satires* and *Epistles*, and the *Lutrin*, a mock heroic.

Racine (1639–1699), the most celebrated of the French dramatists—*Andromaque* was his first successful piece, and *Phèdre* and *Iphigénie* were the most famous—his style is founded on classic models.

Fénelon (1651–1715), Archbishop of Cambrai—one of the sect called Quietists—denounced as a heretic by Bossuet—best-known work, the romance of *Télémaque*.

CHAPTER IV.

GREAT EVENTS OF THE EIGHTEENTH CENTURY.

TOPICS ...	{	England under the Georges.
		Prussia and Frederick the Great.
		Rise of Russia.
		The French Revolution.

I. ENGLAND UNDER THE GEORGES.

232. THE history of England has been traced down to the death of William III., in 1702. He was The successor of William III. succeeded by his sister-in-law Anne, who was a daughter of James II. Her reign fills the twelve years between 1702 and 1714, and with it ends the Stuart line of English sovereigns.

233. The three chief events of Anne's reign are : 1. The union of Scotland with England ; 2. The campaigns of Marlborough ; 3. The contests between the Whigs and Tories.

234. Though by the accession of James I. to the throne of England the two crowns were united, yet Hostility between England and Scotland. England and Scotland were still two separate nations, with separate parliaments. Indeed, ever since that event a feeling of jealousy and dissatisfaction had been growing up in the minds of the Scotch people with reference to England. This feeling grew apace ; and finally, at the beginning of the 18th century, it became plain that a separation of the two countries was nigh at hand, unless something was done to allay the discontent. There was even for a time a show of war upon the part of the Scots. But better counsels prevailed.

235. Wise men on both sides were commissioned to draw up a *Treaty of Union*, and this in 1707 received the sanc-

tion of the Scottish Parliament. This treaty provided that the two kingdoms should form one, under the name of *Great Britain*; and it is believed that this measure, to a great extent, laid the foundation of Scottish prosperity.

236. During a great part of the reign of Anne the War of the Spanish Succession, about which we learned under the account of the Age of Louis XIV., went on. It was in this war that the great captain, Marlborough, humbled the power of France. The contest, as already seen, was brought to a close by the *Treaty of Utrecht*, 1713.

237. Throughout the whole of the reign of Queen Anne a struggle went on between the Whigs and the Tories for the possession of the government. Anne, though at heart a Tory, was long compelled to yield to the guidance of her Whig ministers. The strife raged fiercely around two great questions,—the War and the Church. The Whigs, of whom Marlborough was leader, cried out for war; the Tories sought the restoration of peace. The Whigs were Low Church; the Tories, High Church. The Whigs at last were forced to succumb, a Tory ministry came into power, and the *Treaty of Utrecht* was their work.

238. Anne died of apoplexy in the year 1714. She had lost her husband (Prince George of Denmark) six years before. Not one of her seventeen children was then living. She was a woman of little talent and less learning; simple and homely in all her tastes and habits. The expression of her face was heavy,—the dull look of one upon whom domestic bereavements had laid a heavy hand. She had, however, an affectionate disposition, and her virtues obtained for her the title of “Good Queen Anne.” Her reign is noted as one of the brilliant periods of English literature.

239. Queen Anne dying without children, the Parliament chose as king, George, Elector of Hanover, who was a descendant of James I. in the female line, and the next Protestant heir. With him begins the Guelph line, or House of Brunswick. This dynasty still continues to rule England ;* but so far as we are now concerned we shall carry the narrative only down to George III., whose rule passes over into the 19th century.

240. George I. was a German ; so that England now presented the curious spectacle of being ruled by a king who could not speak English. At the time of his accession he was fifty-four years of age. His person was coarse and heavy ; his mind was uncultivated ; his tastes were low. His wife, Sophia of Brunswick, had been left in imprisonment in Hanover, condemned to perpetual confinement for some alleged misconduct.

241. George I., who was a thorough German, thought far more of his Electorate of Hanover than he did of his Kingdom of Great Britain ; and this partiality became a source of political complication. He had been called to the throne by the Whigs, and it was from this party that he chose all his advisers. The Tory leaders were prosecuted and impeached. Great riots then took place, for the feeling of almost the entire nation ran strongly in favor of the Tories ; and opposition to the king finally took shape in the rallying of a considerable party to the support of the *Pretender*.

* The following list comprises the sovereigns of the House of Brunswick, with the dates of their accession :—

	A. D.		A. D.
George I. (great-grandson of James I.).....	1714	George IV. (son).....	1820
George II. (son).....	1727	William IV. (brother).....	1830
George III. (grandson)....	1760	Victoria (niece).....	1837
Regency of the Prince of Wales.....	1811		

242. This person was the son of James II., and called himself James III. He had pretensions to the throne of England and Scotland, for, of course, he did not acknowledge the union of the two kingdoms. His supporters were called "Jacobites," from *Jacobus*, the Latin name for James. Louis XIV. had promised the Pretender aid in winning the British throne; but just then the French king died, — so that when in 1715 risings were made both in Scotland and England in the cause of the Pretender, and he himself came over from France to join in, he was easily defeated, and the attempt utterly failed.

243. A pacific reign, like that of George I., furnishes few events of importance in history. One, however, of disastrous consequence occurred. South Sea scheme.

A Scotchman named Law, who had become controller-general of France, and amused that country with financial schemes which at first promised to enrich, but finally almost ruined the country, was the means in 1720 of inspiring the British people with a similar visionary project, called the South Sea Bubble. It seemed for a time to prosper, and many realized large fortunes by selling their shares at a premium to others; but in a short time its unsoundness was discovered, the price of shares fell, and thousands were utterly ruined. With great difficulty the House of Commons equalized as nearly as possible the state of gain and loss among the innocent parties, and credit was restored.

244. George II., son of George I., ascended the throne of Great Britain in the forty-fifth year of his age, Character of George II.

1727. He was a little, light-haired, fair-complexioned man. Having resided some time in England, he had a partial knowledge of the English language, which, however, he spoke with a foreign accent. He cared as little for science, art, or literature as did his father, and he was more than once heard to growl, in his German-English, that he saw no good in "bainting and boetry."

245. During nearly half the reign of George II. (i. e. till 1742) the office of Prime Minister was held by Walpole. Sir Robert Walpole. He was a man of little learning, rough and boisterous in his manners and in his life ; but he retained his great power with a passionate grasp, preserving it, dishonorably indeed, but with consummate tact. Bribery was the secret of his long reign as Premier ; so that he had always at command a majority of votes in Parliament.

246. During the reign of George II. there were four wars of considerable importance : 1. The war with Spain ; 2. The war of the Austrian Succession ; 3. The war for the Young Pretender ; 4. The American war with France.

1. The war with Spain was begun in 1739, and was forced on George II. and Walpole by the general wish of the people, who were stirred up by tales of wrong done to Englishmen by the Spaniards in America. Little or nothing came of this war.

2. The war of the Austrian Succession broke out in 1741. It was to determine whether Maria Theresa, daughter of the Emperor of Germany, Charles VI., should succeed to the Austrian throne, or whether it should go to another claimant, Charles, the Elector of Bavaria. Though it was a quarrel with which in reality England had nothing to do, yet George II. espoused the cause of Maria Theresa, while Prussia under Frederick the Great, and France under Louis XV., took the side of Charles. Nothing came of this war, as England and France gave back their conquests to each other at the end of it. (Treaty of Aix-la-Chapelle, 1748.)

3. In the year 1745 Charles Edward, the son of the Old Pretender, tried with French aid to gain the British crown for his father. The battle of Culloden decided against him.

4. The war with France had relation to the colonies of the two countries in America, and is known in United States history as the "French and Indian War." It began in 1755, was continued into the reign of George III., who began to rule in 1760, and was ended in 1763 by the Peace of Paris. By this treaty all Canada was surrendered to the British.

247. During the latter part of the reign of George II. the great figure in politics was William Pitt, known as the *Great Commoner*. He was born

Pitt.

in 1708; he was educated at Oxford, served in the army, then in Parliament, and finally giving himself up entirely to politics, he won for himself a leading place in the government of his country. He directed all his genius to raising the glory of England both in America and in India; and it was to his clear head and admirable administrative faculties that Great Britain owed her formidable position in the politics of Europe in the middle of the 18th century.

248. George III. in 1760 ascended a glorious throne. Through the energy and foresight of the Great England under George III. Commoner Britain had become the first nation in the world. He was the first monarch of his House who could be regarded as English in feeling. His first speech to the Parliament contained words which showed that England had obtained at last a native king. "Born and educated in this country," said George, "I glory in the name of Briton."

249. George III. was the best of the Georges, which, however, is not saying much. He was correct Character of George III. in his private life, devoted himself faithfully to the duties of his station, and no doubt had the good of his country at heart. But he was a man of narrow understanding and obstinate prejudices, and his very patriotism led him into a series of fatal blunders. Long prone to insanity, his mind quite gave way in 1810, though he lived until 1820.

250. This reign was fruitful in Colonial history. Indeed, ere it was five years old, symptoms of the Events in America. great, and to Britain disastrous, American War began to appear. The trouble arose during the administration of Mr. Grenville, showing itself decisively on the passage of the Stamp Act, 1765. This was afterwards repealed; but other taxes were imposed which finally precipitated that momentous conflict which resulted in the inde-

pendence of our country and the appearance of the Republic of the United States among the powers of the earth.

251. It was in this reign also that the great struggle between the French and English for the possession of India was settled in favor of the latter. The English power in India first made great advances under Clive, and after him the most famous name in the history of British India was that of Warren Hastings. Not only were the French subdued, but the various native princes were conquered one after another, and their provinces incorporated with the British dominion; so that now England rules over 200,000,000 of people in Hindostan.

252. Aside from Colonial history, the most important events with which England had to do during the latter part of the 18th century were the events of the French Revolution, — that fearful maelstrom of war that drew into its vortex all the nations of Europe. The part which England played in this mighty epoch will, however, be best related in the special section on the French Revolution. (See p. 409.)

2. PRUSSIA AND FREDERICK THE GREAT.

253. We are now to trace the rise of Prussia, that great power which in our own times has been able to bind together the long-dissevered German states into the mighty German Empire.

254. One of the numerous states of the German Empire during the Middle Ages was the Electorate of Brandenburg. Lying alongside of this was a small territory known as the Duchy of Prussia.* While Elizabeth sat on the throne of England, the Electors of Brandenburg added this duchy to their dominions. By

* The name *Prussia* is derived from the word *Borussi*, the name of a fierce Slavonic tribe.

good management on the part of its rulers Brandenburg grew apace ; and finally, towards the close of the 17th century, the Elector Frederick III. bargained to lend the Emperor aid in the War of the Spanish Succession, provided he obtained the crown of Prussia. The first year of the 18th century (1701) marks the change of the last *Elector of Brandenburg*, Frederick III., into the first *King of Prussia*, Frederick I.

255. The second king of Prussia was Frederick William, (1713-1740). He was a stern old tyrant and semi-savage, but he was at the same time a rigid economist ; and he set himself to drilling and disciplining a magnificent army, which in the hands of his son was to be the instrument for raising Prussia to the position of one of the greatest military powers in Europe.

256. This son was the famous Frederick II., or, as history calls him, Frederick the Great. He was born in 1713. By his tyrannical old father, Frederick William, he had been kicked and raved at and fed on bread and water, till he finally ran away, and was with great difficulty saved from the death of a deserter. This was not a promising training ; but there was the true marrow in the young man, so he bided his time, while in the mean time he played on the flute, and scribbled books, and kept up a correspondence with Voltaire and others of the new French school of philosophy.

257. In the year 1740 rough old Frederick William died, and his son came to the throne of Prussia. He had as a boy had the dream of being a great soldier : he was now the possessor of a full treasury and a well-drilled army, — so he looked about for a war.

258. In the very year in which Frederick came to the throne the Emperor of Germany, Charles VI., died. His daughter Maria Theresa, by a law called a *Pragmatic Sanction*, became ruler over all the

hereditary dominions of Charles, namely, the kingdoms of Hungary and Bohemia, the Archduchy of Austria, etc.— and she was called by her highest title, that of Queen of Hungary. The Empire, of course, was at the disposal of the Electors. No sooner had Maria Theresa come to power, than various princes began to lay claim to the whole or part of her dominions.

259. Among others Frederick set up a claim to part of the territory of the helpless princess; to wit, Silesia, claiming it as part of the ancient dominion of the House of Brandenburg. It was a mere pretext, without show of justice; but Frederick marched an army into Silesia, won two victories (1741, 1742), and Maria Theresa, anxious to concentrate her energies against her other foes, made over Silesia to him. This is known as the *First Silesian War*.

260. Hostilities were renewed in 1744; but nothing came of this *Second Silesian War*, though France and England were both in it on opposite sides, and it was closed the next year. Eight years of peace followed, and this breathing-space was devoted by Frederick to the good of Prussia, which, under his able administration, continued to rise in importance.

261. And it needed all the strength he could husband; for in 1756 there broke out another and far greater contest, called the *Seven Years' War*. This time Frederick was not to blame for drawing the sword; for though, in fact, he drew it first, the war was strictly defensive. Austria formed a secret treaty with France, and another with Russia, Poland, Saxony, and Sweden, for the partition of Prussia. England, then engaged in the great Colonial wars with France, took sides with Prussia;— and so it was that Frederick, unaided save by the half-hearted support of Great Britain, had to confront more than half of Europe, arrayed in arms to overwhelm him.

261. The story of how the Prussian captain-king bore up against this "sea of troubles" that raged all around his country forms one of the most wonderful chapters in military annals. Some of the main points are stated in the note below ; * but, leaving aside details here, we may say that after the conflict two results appear : 1. That in Frederick himself was one of the world-soldiers, one of the men that make epochs in the history of war and of nations : 2. That in Prussia a new power had arisen. In fact, henceforth *Prussia takes rank as one of the Five Great European Powers, and the Holy Roman Empire is practically divided into the two great monarchies of Austria and Prussia, which till the French Revolution held the balance of power on the Continent.*

* FIRST CAMPAIGN, 1756. — Frederick assumed the aggressive, knowing that a league had been formed against *him*. At the head of 70,000 men he invaded Saxony, took Dresden, and defeated the Austrians at Lo'wositz. At Dresden Frederick seized the state papers, and found therein the whole story of the secret plot for the partition of Prussia : these papers he published, in order to defend his action in beginning hostilities.

SECOND CAMPAIGN, 1757. — This campaign, the greatest of the seven, began with the invasion of Bohemia by Frederick. Near Prague he won a great battle over the Austrians, but he suffered a severe defeat at Kolin. Then a succession of terrible misfortunes burst over the head of the Prussian king, — Russians breaking through his eastern frontier, Swedes in Pomerania marching on Berlin, his friends the English driven in disgrace from Hanover by the French, who were rapidly advancing into Saxony. It is said that at this time Frederick meditated suicide, such were the disasters that overwhelmed him. But presently there came a turn in the tide. The Russian army of invasion was recalled, owing to the illness of the Empress Elizabeth ; Frederick, taking heart again, dashed into Saxony with only 20,000 men, and at Rossbach overwhelmed an Imperialist and French army of three times the force. Another crushing defeat to the Austrians took place a month afterwards at Leuthen, in Silesia. The immediate result of these victories was the recapture of Silesia, which had been overrun by the Austrians, and the exaltation of Frederick to the greatest fame. London was a blaze of illumination in his honor, and the English Parliament voted him £ 700,000 a year.

262. It is estimated that, counting the losses on all sides, a million of men fell in the Seven Years' War. Prussia bore her own sad share in this sacrifice, while those who survived found themselves in a wasted land. Frederick now set himself to repair the terrible mischief done by the war. He gave corn for food and seed to the starving people, and rebuilt the houses that had been burnt. Silesia was freed from the payment of all taxes for six years, and other districts received the same boon for a shorter time. Rewards to his living soldiers and pensions to the widows and children of the dead were bestowed with liberal hand. Measures were taken for the revival of commerce ; and though these measures were not always wise (the debasement of the coin by

THIRD AND FOURTH CAMPAIGNS, 1758-1759. — In the third campaign the cause of the Prussian king was on the whole triumphant : he still held Silesia, and the French had been driven out of Germany. But in the fourth year of the war blow after blow fell heavily on Frederick. At Kunersdorf, in Brandenburg, he was terribly defeated by the Russians who had again taken the field against him. Dresden was taken and held by the Austrians, and an army of nearly 20,000 Prussians, hemmed in by Austrian bayonets among the passes of Bohemia, was forced to unconditional surrender.

SIXTH CAMPAIGN, 1760. — Frederick, desperate, stood at bay, surrounded by a gigantic host of 200,000 men. One tremendous dash he made at Torgau, where he won a victory that saved the Prussian monarchy from annihilation. But he could do no more than watch his foe from a strong camp in the heart of Silesia. The outlook was so discouraging that again, we are told, the thought of suicide crossed Frederick's mind.

LAST YEAR, 1762-1763. — A death saved him. Elizabeth of Russia died in January, 1762, and her cousin Peter III., Frederick's warm admirer and friend, not only made peace, but sent him aid. The example set by Russia was followed by Sweden. Then came the Peace of Paris (1763), concluded by England and France, so that Austria and Prussia fronted each other alone. However, these Powers also signed the Peace of Hubertsburg (1763), and this ended the Seven Years' War. This treaty left the face of Germany on the whole unchanged, — Prussia intact and still holding Silesia.

the king's order is a notable instance of financial unwisdom), yet, on the whole, Prussia flourished greatly under Frederick. The best proof of this is, that, having inherited a kingdom with a population of two millions, and six million thalers in the national treasury, he died leaving seventy-two millions of thalers, and a contented and happy population of over six millions.

263. Frederick the Great died in the year 1786; and it may be noticed as an interesting fact that his last great public act was the conclusion, in

Character of Frederick.

FREDERICK THE GREAT.

that year, of a commercial treaty with the then infant Republic of the United States of America. He was in his seventy-fifth year at the time of his death, and had reigned forty-seven years. He was a great soldier, of daring courage in battle, of quick and fertile genius in difficulties, of most elastic spirit in the hour of depression. He gave himself little trouble respecting the justice of his undertakings; but he was distinguished from the

common herd of conquerors by having one fixed object,—to make his country one of the great powers of Europe. Carlyle selects him as a hero for the characteristic reason that “he managed *not* to be a liar and a charlatan, as the rest of his century was.” And certainly, as compared with his royal contemporaries, the Georges of England and the Louises of France, he challenges our admiration for his consummate ability, if he cannot claim our love as a man.

3. THE RISE OF RUSSIA.

264. In the history of Europe down to the beginning of the 18th century Russia is a blank. Why is this? The stock to which the Russians belong, the Slavic race, is inferior in capacity to no other member of the Aryan family. Moreover, Russia early started on the path of civilization. The foundation of the kingdom was laid by the Norseman Ruric in the 9th century, and in the 10th century the Russians were Christianized, adopting the faith of the Greek Church.

265. The explanation of why no progress was made is found in the fact that Russia lies directly exposed to the attacks of those fierce Mongolian savages who, from their hive in Central Asia, were wont to pour themselves in devastating tides into Europe. From these inroads the Slavic land had repeatedly suffered, when, in the 13th century, it was completely overrun by the Tartars of Genghis Khan. For more than two centuries Russia was held in bondage by these savages, while the Poles and Lithuanians hemmed her in to the west, so that she was quite cut off from any part in European affairs.

266. The deliverance of Russia from Tartar supremacy was due to Ivan Vasilovitz, who became *czar*, or emperor, about the same time that Queen Elizabeth ascended the throne of England. Russia was now a powerful state, but it was cut off from the Baltic by the Poles and Swedes, and from the Black Sea by the Tartars, who held the Crimea. However, the close of the 17th century saw the appearance of a ruler who was to give Russia for the first time a place in the states-system of Europe. This man was Peter the Great.

267. Peter was a son of the czar Alexis, called the Good (1645 - 1676), and the father of this Alexis was a certain Michael Romanoff, who in 1613 was

Russian ques-
tion stated.

wardness.

Progress of
Russia.

Peter's biog-
raphy.

made czar : from him the present royal family springs (the old line of Ruric then ceasing). Peter was born in 1672, and ten years later was crowned, along with his half-brother Ivan ; but the latter, a poor deformed idiot, was only a name in the state. Having baffled the ambitious scheme of his half-sister Sophia, a bold and beautiful woman who acted as regent, the young Peter, when only seventeen, seized alone the scepter (1689).

268. At this time he was a tall, rough youth, sensual and debauched, but showing at the same time a tremendous fund of native energy and will. And, His person and aims. strangely enough, this energy and will seemed to aim, not at what is ordinarily with such characters the object of ambition, namely, war and destruction, but at the elevation of his people by means of those peaceful creative arts that are the basis of all national prosperity. Wars he waged, indeed, but he did not make war for war's sake : he made it because he was forced to do so in carrying out his pacific plans.

269. The first great idea that possessed Peter seems to have been that the absence of any available His first idea. seaboard was necessarily a source of weakness to his country. Seizing Azof from the Turks (1696), he obtained a footing on the Black Sea ; and, having accomplished this, he resolved to form a fleet sufficient to overawe that power.

270. With this view the young monarch, leaving the government in the hands of an old noble, traveled His visit to the West. to Holland and England for the purpose of learning the art of ship-building, and of acquiring whatever knowledge might be necessary for his great undertaking. At Saardam in Holland he worked as a common ship-carpenter, receiving his wages every Saturday night, and every day boiling his own pot for dinner. At the same time he picked up rope and sail making, blacksmith's work and some surgery, though afterwards his surgery was mostly of

a very rough kind.* In England, whither he went in 1698, he was heartily received by King William III. ; but, instead of passing his time in the usual entertainments of princes, he busied himself visiting dock-yards and looking into all the details of naval construction.

271. Returning home in the first year of the 18th century, Peter began his social reforms. Dressing himself in a brown frock-coat, he insisted on all Russians, except the priests and the peasants, casting off the long Asiatic national robe. He laid a tax on beards. He changed the titles and lessened the power of the nobility. He tolerated all sects, and gave free circulation to the Bible.

272. To obtain an outlet on the Baltic was now Peter's object. The opportunity seemed to be excellent. Three years before this, in 1697, the king of Sweden had died, leaving as his successor a youth but fifteen years of age. He seemed to be helpless ; so, in kingly fashion, Russia and Denmark and Poland entered into a league for the dismemberment of his kingdom. But this was not to be so easily done ; for the youth was Charles XII., that astonishing meteor that for a decade swept across the northern sky.

273. Charles XII. allowed his foes no time to carry their plot into execution. Moving swiftly, first upon Denmark and then upon the Polish army at Riga, he speedily rid himself of two of his three enemies. Next he turned upon a Russian force of 80,000 men that was besieging Narva, a small town near the Gulf of Livonia, and within the Swedish dominion. His own force was only a tenth that of the Russians ; but with his gallant Swedes he flung himself with such impetuosity on the enemy that he utterly overthrew the Russian army, capturing most of it,

* Thus, on his return to Russia he found that his guards had made a rebellion, which, however, had been quelled. With his own hand he beheaded twenty of the wretched guards in one hour.

with its artillery and baggage (November 30, 1700). Peter was not at the battle. "Ah," said he, when the news came to him, "these Swedes, I knew, would beat us, but they will soon teach us how to beat them!"

274. The same marvelous fortune attended the Swedish warrior in the operations of the next four years in Poland and Saxony. His success quite intoxicated him, and he prepared to invade Russia. Peter offered terms of peace, but Charles declared that he could negotiate only at Moscow. When the czar was informed of this haughty answer, he coolly replied, "My brother Charles affects to play the part of Alexander, but I hope he will not find in me a Darius." Proposes to invade Russia.

275. The strategy adopted by Peter for the purpose of meeting this invasion was simple and sensible. The advance of the Swedes on the direct line to Moscow was prevented by the destruction of the roads and the desolation of the country. After enduring many privations Charles turned off towards the U'kraine, whither he had been invited by Mazep'pa, a Cossack chief who had thrown off his allegiance to the czar. The convoy and reinforcements which Charles had expected from Lithuania were intercepted by the Russians; but, notwithstanding these misfortunes, he continued the campaign even in the depth of winter, though the season was so severe that two thousand men were at once frozen to death, almost in his presence. Peter's strategy.

276. At length Charles laid siege to Pultowa, which contained one of the czar's principal magazines. The town was obstinately defended, and Charles was wounded in the heel while viewing the works. Before he recovered he learned that Peter was advancing to raise the siege. Leaving 7000 men to guard the works, the Swedes advanced to intercept the Russians, accompanied by their king borne in a litter. The battle was Pultowa.

decided by the Russian artillery, for Charles in his rapid march had abandoned his cannon. In less than two hours the Swedish army was ruined, and Charles, with only 300 followers, sought shelter within the frontiers of Turkey (1709).

277. To pursue the subsequent career of Charles XII. Close of Charles XII.'s career. would be aside from our purpose here. Suffice it to say that this astonishing man ran a course of nine years longer, — a course of strange ups and downs, and was finally killed by a cannon-ball while besieging the castle of Fredericshall in Norway, 1718.

“ His fall was destined to a barren strand,
A petty fortress, and a dubious hand;
He left the name at which the world grew pale
To point a moral or adorn a tale.” *

278. To Russia the winnings of the struggle with Sweden Gains to Russia. were most important, for Peter gained Livonia and the other Swedish possessions east of the Baltic, so that now he had a water-front on that sea as well as on the Euxine. Later in his reign he extended his borders on the other Russian sea, the Caspian, at the expense of Persia.

279. In the intervals of the war Peter the Great was not His pacific measures. forgetful of his pacific ambition. In 1704 he founded the city of St. Petersburg,† at the mouth of the Neva, on the Gulf of Finland (a region won from the Swedes), and he made it his capital in place of the old metropolis, Moscow. In the internal state of the country he made many changes: he remodeled his army, created

* Dr. Johnson, *Vanity of Human Wishes*. The fine passage beginning with “On what foundation,” etc., and of which the four lines above quoted form the conclusion, may be read for a summing up of the whole career of the “Madman of the North.”

† So called after the name of his patron saint and name-father, the Apostle Peter.

a navy, improved the administration of justice, enlarged the commerce, encouraged manufactures, cut canals, built roads, and introduced the printing-press. It was the task of a giant to lift the great savage land into a position among the civilized nations, but Peter did it.

280. This greatest of the czars died at the beginning of the year 1725, of fever caught by wading knee-deep in Lake Ladoga, to aid in getting off a boat which had stuck on the rocks. His character is well

Death and
character.

PETER THE GREAT.

described by Voltaire: "He gave a polish to his people, and was himself a savage; he taught them the art of war, of which he was himself ignorant; from the sight of a small boat on the river Moskwa he created a powerful fleet; he made himself an expert and active shipwright, sailor, pilot, and commander; he changed the manners, customs, and

laws of the Russians, and lives in their memory as the 'Father of his Country.'"

281. The history of Russia from the time of Peter the Great down to the close of the century may be rapidly sketched. During the greater part of this time the throne was filled by women. There was first his widow, named Catherine I., who continued the policy of her great husband. Her reign, however, lasted but for two years, when she was succeeded by Peter II., the grandson of Peter the Great. His death, three years afterwards, brought to the throne a niece of Peter the Great, named Anne. Her rule lasted for ten years, till 1740. Then came Peter the Great's daughter Elizabeth, who filled the throne till 1762. Elizabeth left her empire to her nephew, who became Peter III. In a few months, however, he was murdered, and his wife was raised to the throne as Catherine II., surnamed the Great (1762).

Peter's suc-
cessors.

282. Catherine II. was, next to Peter the Great, the ablest and most successful of the Russian autocrats. By her vigorous generals, Potem'kin and Suwarrow [*soo-ör'ro*], she won greatly from the Turks, and achieved the conquest of the Crimea, thus getting rid of the last trace of the old Tartar dominion, and at the same time obtaining free access to the Black Sea.

283. But Catherine II. won still more by her share in what is called the *Partition of Poland*, though the means by which she won was a gross violation of the law of nations. The scheme for dismembering the kingdom of Poland is supposed to have originated with Frederick the Great of Prussia, and he and Catherine of Russia and the Empress-Queen Maria Theresa, Queen of Hungary, entered into it. The Poles were so weakened that they could make no resistance, so the royal robbers each seized certain provinces in 1772.

284. In 1792 another partition was made by Russia and Prussia only, and in 1795 Poland was destroyed altogether as an independent nation, and its remaining territory was divided among its three neighbors.

“Oh ! bloodiest picture in the book of time !
Sarmatia fell, unwept, without a crime.”

Wicked as was this assassination of a nation, the accession of territory to Russia was of immense importance to the empire, and “brought that nation into the middle of the continent and into the thick of European affairs.”

285. Catherine II. died in 1796. She was succeeded by her son Paul ; but he was an eccentric, half-crazy creature, and when he was murdered, in 1801, his son Alexander I. came to the throne. Now this Alexander I. was the grandfather of the present Alexander II., Emperor and Autocrat of all the Russias.

4. THE FRENCH REVOLUTION.

286. "After me the deluge" (*Après moi le déluge*), sighed Louis XV. to his courtiers as he lay on his death-bed in the year 1774, which was the very year of the meeting of our "First Continental Congress." The deluge came, — that dreadful deluge of fire and blood known in history as the FRENCH REVOLUTION. We are now to learn about the causes, the leading facts, and the results of this tremendous explosion.

Remark of
Louis XV.

287. The student will remember that the close of the reign of Louis XIV. (1715) saw France in an exhausted and a demoralized condition. Under his successor, Louis XV. (1715–1774), things went from bad to worse. The court, ruled by the painted favorites of the licentious king, Pompadour and Du Barri, exhausted every shape of costly debauchery. The last sou of taxation was wrung from the starving peasants. And, to add to the awful burden, a continued series of wars was carried on for the gratification of a profligate ambition, and sometimes apparently for no better reason than to afford

France and
Louis XV.

employment to a numerous body of idle nobility, who disdained to follow any other profession than that of arms.

288. Louis XV. died in 1774, leaving his throne, with all its embarrassments, to his grandson Louis XVI., a kind-hearted, amiable, pious young man, but utterly destitute of the mental qualities calculated to fit him for the arduous position he was called upon to occupy. Then twenty years of age, he had been already four years married to Marie Antoinette, the beautiful daughter of Maria Theresa. Surrounded by eager courtiers, and saluted for the first time as king and queen, they fell upon their knees and cried, weeping, "O God, guide us! Protect us! We are too young to reign!"

289. And they were indeed too young and too inexperienced to deal with a problem whose solution would have demanded the supreme genius and iron will of a Cromwell or a Napoleon. For already signs of dissolution and prophecies of woe were abroad. France had been sowing the wind, and was now to reap the whirlwind. Long wars and the lavish expenditures of the last century and a half had reduced the finances of the kingdom to a deplorable condition. The public credit was at its lowest ebb. The treasury presented a deficit of two hundred millions of dollars. The people were overtaxed, restless, and half savage. Many abandoned agriculture and sought a precarious subsistence by smuggling and spoliation.

290. A spirit of political and religious infidelity pervaded the middle and lower classes. The throne had been too long degraded by excess and tarnished by scandal to command the affection of the multitude. The nobles were scorned rather than revered, and not even the ancient stronghold of terror remained. The clergy, by their cruelties, their ignorance, and their debaucheries, had alienated the great body of the people.

ple, and brought down upon themselves the satire and indignation of the enlightened. In Voltaire [*vol-tāre'*], Rousseau [*roo-so'*], Helvetius, and Condillac [*con-de-yāk'*] the new opinions had found their chief advocates and leaders. Before their sweeping censures so-called Christianity, Loyalty, Tradition, had been reduced to powder. They were speedily reinforced by all the intelligence of the age. A host of distinguished men hastened to their support, and the innovators carried all before them,—leveling good as well as evil, and sapping the foundations of truth, mercy, and chivalry, while compassing the necessary destruction of falsehood, despotism, imposition, and vice.

291. The grand problem was the finances. The first financial minister of the reign was Turgot [*tür-go'*], an able man of extensive views, who proposed gradually to sweep away the abuses which weighed so heavily upon the kingdom; but his reforms alarmed the courtiers: they persuaded the king that such experiments were dangerous, and Louis, always obedient to the last adviser, dismissed Turgot in 1776. Two new ministers soon gave way to Necker, a Geneva banker of good reputation and the best intentions. His maxims were the reduction of expenditure, so as to avoid all necessity of loans, except on extraordinary occasions, and the maintenance of public credit, so that money might be borrowed when requisite. This clever banker held his office for five years, and in 1781 was able to produce a balance-sheet which showed a revenue larger than the expenditure. But his accounts angered the nobility by revealing that they paid no taxes; so Necker was harassed into a resignation.

292. It was during the administration of Necker that France became embroiled in a war with England, caused by the former country's siding with the Americans in the struggle for independence. To have aided in founding a great democracy across the Atlantic

Financial
measures.

Effect of the
American war.

was a subject of pride to the French ; but the sight of their handiwork reminded them painfully of the position still occupied by themselves. Democratic doctrines from America found their way into the dull head of the French peasant, who could not help realizing the injustice that gave two thirds of the soil to the nobility (who numbered only about 150,000 souls) and to the priests, both of which orders were exempt from taxes, while he and his twenty-five millions of brother serfs, owning but one third of the land, had to bear all the burdens of the state.

293. The war with England only added to these burdens, while the finances, no longer in the skilled and prudent hands of Necker, were managed by a brilliant financial juggler named Calonne [*cal-on'*], who borrowed on every side without one thought of repayment. For a time this went on ; but the day came when even Calonne could get no more. It was necessary to devise some new expedient, and the one adopted was the assembling of the *Notables*.

294. The *Assembly of the Notables* is the name given to a convention of the chief nobles and magistrates of France called to consult on public affairs. Such a meeting had in the previous centuries been occasionally called by the kings in emergencies, and much was now hoped from it by the nation. It met in February, 1787 : there were 137 members. Calonne wanted to make up for the deficiency of revenue by a land-tax ; but his proposal was rejected by these lords of the soil, and the Assembly was dissolved in May. Then came the dismissal of Calonne, who was soon succeeded by Brienne, Archbishop of Toulon. But Brienne could do nothing to stem the rising tide, so Necker was recalled in 1788.

295. Necker, as his first act, proposed to convoke a *States-General*, an assembly having the rights of conferring and petitioning. There had been no meeting of

such a body since the days of Richelieu, the last being in 1614. Since that time the existence of a constitution had been almost forgotten, for Necker's proposition. the three kings that intervened had caused a virtual suspension of every power except their own. But the convocation of a States-General, where, as in an English Parliament, every class of society had a voice, was hailed as an acknowledgment that power proceeded from the people.

296. All over France the elections went on, and no man who wore a decent coat was refused leave to vote. The elections. Three millions of the people sent up their deputies — lawyers, doctors, priests, farmers, writers for the press — to the great States-General, in which for the first time during nearly two centuries the down-trodden Commons were to sit in council with the nobles and the high clergy. There were 1200 representatives, and they met in the king's palace at Versailles [*ver-sālz'*] on the 5th of May, 1789.

297. It soon became evident that the real strength of the States-General lay in the Commons, or, as the The Commons assert themselves. French named them, the *Tiers État* [*te-airz' ā-tū'*], i. e. the Third Estate.* They numbered as many members as the *noblesse* and the clergy together. At the very outset came the trial of strength. It had not been decided whether the nobility, the clergy, and the *Tiers État* should meet in one chamber, or be organized into two: it had been *assumed* that the latter would be the plan. But the deputies of the *Tiers État* would not submit to be separated from the Upper House. Sitting in their own chamber, they invited the nobles and the clergy to join them; and when the invitation was scornfully rejected, they constituted themselves the *National Assembly*, by which name we shall now have to call the body.

* The Clergy and the Nobility constituting the First and the Second Estates.

298. In vain did dukes and archbishops complain of this unexampled usurpation of supreme power. The king was undecided and alarmed, and in this condition he took a suicidal step. He prorogued the Assembly for a month, and stationed soldiers at the door to prevent the members from going in. Their president, Bailly, when crossed bayonets refused them admittance, led them to the Tennis-court (*Jeux de paume*) of the palace, where they swore a solemn oath not to dissolve their Assembly until they had formed a constitution for France. The firmness of the Tiers Etat gave them the victory. A large secession took place from the other orders, — most of the clergy and forty-seven of the *noblesse*, with the Duke of Orleans at their head, joining the Commons in their hall.

299. There was Lafayette, a pure patriot, but not a man of commanding ability. And there sat Mirabeau [*mēr-ä-bo'*], the wickedest and most debauched aristocrat in France, but a man of pre-eminent power and eloquence. Different from him, and near him, was the small person and commonplace countenance of Robespierre [*robz-pe-air'*], — grinning, smirking, and contemptible, — but who ere many months were over was to thrill with terror the stoutest hearts.

300. The Court, thus foiled and acknowledging its own humiliation, adopted again an unpopular course : Necker was banished, and troops were gathered around Versailles. But the Assembly proceeded with their business in the most radical fashion. They abolished all privileges of birth or profession ; taxes were imposed on all equally ; the public debt was consolidated, the press was declared free, and political and religious liberty was guaranteed. These were great steps in advance.

301. Meanwhile all Paris was in a state of insane commotion. Clubs, meetings, associations of all kinds, kept every quarter of the great city astir.

King and Commons.

Three characters.

Action of the Court and Assembly.

Madness of Paris.

Enthusiasm grew with every fresh event, and already the thirst for blood, which so strongly distinguishes the Parisian mob, began to fire the hearts of the rabble. A single spark exploded the mine. There came a report that the soldiers were on the march to dissolve the National Assembly. The people rushed to the defence, guns were procured, and tricolored flags hoisted on public buildings. Rioting and pillage went on in various quarters, and the more so that the guards, when called out to disperse the mob, refused to fire. Finally on the 14th of July a definite aim was given to the wild intoxication of the people by a cry which suddenly went through Paris, "Let us storm the Bastile!"

302. This ancient and fortified prison was at the time defended by a feeble garrison of eighty-two invalids and thirty-two Swiss, under a stanch old soldier, the Marquis de Launay. The wild multitude raged around its walls, but the governor utterly refused to surrender. Then a siege of four hours began. The besiegers were joined by the French guards, — cannon were brought, — De Launay capitulated, — the drawbridge was lowered, and the Bastile taken: taken by a lawless mob of maddened men and women, who forthwith massacred the governor, his lieutenant, and some of the aged invalids, — freed the few prisoners found in the cells, — set fire to the building and razed it to the ground, — garnished their pikes with the evidence of murder, and so paraded Paris.

Capture of
the Bastile.

303. From this moment the people were supreme. The troops were dismissed from Versailles, Necker was recalled, the king visited Paris, and was invested at the Hôtel de Ville with the tricolored emblem of democracy. Then began what is called the first *émigration*, — that is, a general and most cowardly, as well as most imprudent, flight of the nobles, who from beyond the frontiers witnessed the revolution in ignoble safety. The king and his family remained at Versailles, sad at heart amid

The sequel.

their presence-chambers and garden-groves, four leagues from volcanic Paris.

304. Hither, from time to time during the few days that intervened between the 14th of July and the 4th of August, came strange tidings of a revolution which was no longer Parisian, but national, — tidings of provincial uprisings, of burning châteaux, of sudden vengeance done upon unpopular officials, tax-gatherers, and the like. It was plain that the Nobility must bow its head before the five-and-twenty savage millions, make restitution, speak well, smile fairly, or die.

305. The memorable 4th of August came, when the nobles did this, making ample confession of their weakness. The Viscount de Noailles [*no-ăy*] proposed to reform the taxation by subjecting to it every order and rank, by regulating it according to the fortune of the individual, and by abolishing personal servitude and every remaining vestige of the feudal system. An enthusiasm, which was half fear and half reckless excitement, spread throughout the Assembly. The aristocrats rose in their places and publicly renounced their seignorial dues, privileges, and immunities. The clergy abolished tithes and tributes. Yet all this availed but little now: it should have been done many months before, to have weighed with the impatient Commons. The people scorned a generosity that relinquished only what was untenable, and cared little for the recognition of a political equality that had already been established by the pike.

306. And now another false step was made by the king. The popular demonstrations had so alarmed the little court yet hanging around Louis at Versailles, that they persuaded him that he must have military assistance. The regiment of Flanders and a body of dragoons came; and on the 1st of October the newly arrived officers were invited to a grand banquet by their

comrades of the royal body-guard. After the dinner was removed and the wine had begun to circulate, the queen presented herself with the Dauphin in her arms, and her husband at her side. Cries of loyalty and enthusiasm burst forth, their healths were drunk with drawn swords, the tricolored cockades were trampled under foot, and white ones, emblematic of the house of Bourbon, were distributed by the maids of honor.

307. The news of this fatal evening flew to Paris. Exasperated by the arrival of the soldiery, by the insults offered to the tricolor, and by hunger, The mob goes to Versailles. the mob rose in fury, and with cries of "Bread! bread!" poured out of Paris and took the road to Versailles. A strange, fearful mob it was, — thousands of women of the wildest appearance, maddened furies, followed by thousands of haggard, cruel, revengeful men. Reaching Versailles they sent messages, threats, and deputations to the king and to the Assembly. They had their smooth speeches from the king and their fair assurances from the Assembly; but they still lingered about Versailles, and though a great rain came on they camped for the night around the palace.

308. Towards morning a grating that led into the grand court was found to be unfastened, and the mob Attack on the palace. rushed in. On they went across the marble court and up the grand staircase. The body-guards defended themselves valiantly, and raised the alarm; the queen fled, half dressed, to the king's chamber, while the "living deluge" poured through galleries and reception-rooms, making straight for the queen's apartments. The royal family listened tremblingly to the battering of the axes on the yet unbroken doors. At this moment of peril came Lafayette, with the national guard of Paris, and succeeded in clearing the palace, and in rescuing for the time the hapless group in the king's apartments.

309. The crowd demanded that the king should come to Paris; and amidst a procession of market-women, at a foot pace, with human heads borne aloft on pikes before the carriage, the unhappy Louis and Marie Antoinette were conducted to the capital (so-called *Foyous Entry*, October 6, 1789), and placed more immediately under the eyes of the revolutionists.

310. During all this time the emigration of the *noblesse* went on. Assembling upon the German frontier towards the spring of the year 1791, they formed themselves into an army under the command of the Prince de Condé, and adopted for their motto, "Conquer or die"; yet they neither conquered nor died, but merely hovered along the Rhine, fearful of endangering the personal safety of the king by any aggressive measures.

311. The king's position was by this time not only humiliating, but perilous. Such had been the desertions, that now Louis and the queen, with their two children and the king's sister, were the only members of the royal family left in Paris. Flight had long been talked of, frequently delayed; but at last everything was arranged for, and Monday night, June 20, 1791, was fixed for the attempt. Eluding the vigilance of the guards, they stole out of the palace in disguise, and entered a carriage-and-four at the gate St. Martin.

312. The flight was successfully made as far as Varennes; but there, while stopping to change horses, the king was recognized. The national guard flew to arms; an aide-de-camp came up in breathless haste, seeking the fugitives and bearing the decree of arrest,—the horses' heads were turned towards Paris, and the last chance for life and liberty was past. After a return-journey of eight days the king and his family re-entered the capital, and were received in profound silence by an immense concourse. More closely guarded, more

mistrusted than ever, he was now suspended by the National Assembly from those sovereign functions which he had so long ceased to exercise or possess.

313. In the mean time the articles of a new constitution had been drawn up, putting France on the basis of a constitutional monarchy. Its articles were publicly ratified by the royal oath and signature, on the 14th of September, 1791. The new constitution.

314. The National (or, as it is sometimes called, the *Constituent*) Assembly having sat for three years, now passed a resolution dissolving itself (September 29, 1791). Its place was taken by a new body, called the *Legislative Assembly*, which began to sit on the 1st of October in the same year. The new assembly.

315. By this time three distinct factions were clearly marked out, and between them there was to be battle to the death. First were the *Feuillants*, who adhered to the law and the constitution; they formed the ghost of the vanished National Assembly, which had established a constitutional monarchy, and they sat on the right of the tribune. The *Girondists*, or Moderate Republicans, formed the second party. Mirabeau would have been their leader, and might have wielded their influence to some effect; but that great man had died a few months before this time. Occupying the highest seats in the hall, and therefore called the *Mountain*, sat the Red Republicans, chiefly members of the Jacobin and Cordeliers Clubs; whose rallying cry was, "No king!" The list of this third party contained those terrible names — Robespierre, Danton, Marat [*mä-rä*] — the very sound of which suggests the thought of blood. The three factions.

316. The spirit of revolution which had set France in a blaze menaced every throne, and it behooved the kings of Europe to see to their own safety. Armies were raised by Austria and Prussia to defend the Foreign invasion and its effect.

royal cause, hostilities were threatened, and the Legislative Assembly declared for war, April 20, 1792. Soon afterwards a force of 70,000 Prussians and 68,000 Austrians and emigrant French royalists crossed the frontier. Perhaps no effort on the part of his most eager enemy could have so injured the cause and periled the safety of Louis XVI. The Assembly replied by fitting out an army of 20,000 national volunteers, and giving the command to General Dumouriez [*dū-moor-yeu'*], who in several actions repelled the invaders.

317. In the mean time, enraged at this interference of the foreign powers, and fluctuating (according to the reports from the scene of war) between apprehension and exultation, the Parisian mob and the extreme Republican party came to regard the king with increased enmity. He was named in the Assembly with violent opprobrium; and the mob, incited to fury by Robespierre and his associates, demanded the deposition of Louis.

318. On the 10th of August the palace of the Tuileries [*tuweel-rees'*] was attacked. The national guards, who had been appointed to the defense of the court-yard, went over to the insurgents, and pointed their cannon against the château. Only 300 Swiss guards were left; and they, overpowered by numbers and fighting gallantly to the last, were literally cut to pieces. The king and his family escaped to the Legislative Assembly, and on the 14th were removed to the old Temple prison.

319. From this time that awful period known in history as the *Reign of Terror* may properly be said to have begun. "My advice," said Danton, "is to confound the agitators, and to stop the enemy by striking terror into the royalists." This advice produced the imprisonment of hundreds of persons considered not sufficiently zealous in the revolutionary cause. A tempo-

rary success won by the Prussians in the capture of Verdun was the death-doom of the unfortunate prisoners. The news was brought in the night, and next day (September 2, 1792) the prisons were cleared by the death of the captives. Three days did the horrible scene of bloodshed continue, and the victims displayed the most touching traits of resignation and heroism. This wholesale massacre is known as the *Massacre of September*.

320. On the 21st of September, 1792, the Legislative Assembly, having sat for the allotted space of one year, was succeeded by a new body of representatives, known by the name of the *National Convention*. The new government.

321. The constitutional party of the old Legislative Assembly (the *Feuillants*) had disappeared in the maelstrom of the Revolution, and the Convention was divided between the Girondists and the Mountain. In the Chamber the Girondists had the majority; but the Mountain, led by Danton, Robespierre, and Marat, had the great revolutionary advantage of being on the aggressive; and they had, besides, the support of all the *sans-culottes*, or rabble of Paris. Their policy was simple and well defined, — the death of the king, and the establishment of a Republic. The parties and their leaders.

322. To proclaim the Republic was the first act of the Convention. Then came the trial of the king. Trial of the king. On the 13th of November, 1792, Louis XVI., who had been four months a prisoner in the Temple, appeared before the tribunal of his enemies. The charges brought against him were based principally upon some papers that disclosed the intrigues of the Court against the Revolution, and on others that seemed to indicate a knowledge of the proceedings in favor of the royal cause in foreign countries. Some writers have pointed out that the deposition of the king (which had already taken place when

the Republic was proclaimed) should have barred all these accusations. But this was not a time either for legal technicalities or calm judgment to have any weight. Robespierre appealed to the will of the people. "What have not the friends of liberty to fear," said he, "when they see the ax unsteady in your grasp, and detect a regret for your past fetters, even after your emancipation?"

323. Louis stood before his judges with a firm countenance. He required counsel, and when one of those he selected declined the task, Malesherbes [*malz-erb'*], who had in the early part of his reign been one of his ministers, came forward to undertake his master's defense. Said he: "I have been twice called to assist at his council-table, when such a summons was an object of ambition to every one. I owe him the same service now that it is a function that many persons would consider dangerous." After an able defense by Malesherbes, a long and earnest discussion arose. Robespierre said, "The last proof of devotion which we owe to our country is to stifle in our hearts every sentiment of sensibility." On the side of the Girondists vigorous efforts were made in the king's defense; but finally the discussion was closed, and three questions were put to the vote, — the guilt of Louis, the appeal to the people, and the penalty.

324. The king by a unanimous vote was pronounced guilty, and the appeal to the people rejected; the question of the penalty to be inflicted remained. But the orators did not deliberate alone; for around the doors of the Assembly was a savage mob, heap ing threats upon all who dared to be merciful, — so that even those who most desired to save the king became frightened. For ten days the voting went on, and when with a voice of emotion the President of the Convention, Vergniaud [*vern-yo'*] declared the result, he found that, out of 721 votes, the sentence awarded by a majority of 26 was death, — death within twenty-four hours!

325. Louis requested the attendance of a priest (the Abbé Edgeworth) to administer the offices of religion to him in his last moments: the request was granted. A last interview with his family, from whom he had for some time been separated, was granted also; but the keepers required that the meeting should take place in a hall which had a glass door giving a view of the interior. The king entered the apartment at eight, and walked about for some time in expectation. At half past eight a door opened, and the queen, the king's sister Elizabeth, and his two children entered, casting themselves with sobs into his arms. After a long and sad conference Louis rose and promised to see them again on the morrow: in spite of this promise, which was not to be fulfilled, the farewell was heart-rending.

A sad scene.

326. Towards midnight the king slept soundly, continuing to do so till five in the morning, when he received the sacrament from the priest. At eight on the morning of January 21, 1793, the officers entered; the procession moved between two lines of armed men, and arrived, at half past ten, at the Place de la Révolution. There in a large open space stood the scaffold with the fatal guillotine,* surrounded by the guards and a rabble uttering ferocious cries and yells. Louis attempted to speak: "I die innocent; I pardon my enemies; and as for you, unfortunate people—" but the drums drowned his voice, and while the confessor poured into his ear the words, "Son of St. Louis, ascend to heaven!" the king ceased to live.

Execution of Louis XVI.

327. This act of regicide was equivalent to a declaration of war with the whole of Europe. England, Holland, Spain, Germany, Sweden, and finally

Foreign affairs.

* "La guillotine," as the French call this deadly machine, was invented about 1755 by Dr. Guillotin, whose name in the French feminine form it bears. It is a large loaded knife set in a wooden frame, and its action is instantaneous.

Russia, flew to arms. Almost at the same time the French province of La Vendée broke into open insurrection, and the Republic found itself called upon to suppress disaffection at home, to organize armies, and to defend France from 350,000 of the best troops in Europe, now approaching the frontiers upon every side. A levy of 300,000 men was accordingly decreed, and Dumouriez marched into Holland, where he won several victories ; but soon after, becoming disgusted with the excesses of the republican government, he went over to the enemy's camp. Other generals, however, took his place, and the war went on in the Austrian Netherlands, along the Rhine, and in Italy. Though sometimes beaten, the French were on the whole victorious, and were able all the time to make head against the allies. The energy displayed by the leaders of the Revolution was truly amazing.

328. These achievements of the French armies abroad were, however, almost effaced by the disgrace **Excesses of the revolutionists.** which fell upon the name of the Republic in consequence of its atrocities at home. Appropriately commencing with the abolition of religious belief, the worship of Reason, and the suppression of the Sabbath, the savage man who ruled the whirlwind passed on to a saturnalia of blood. The queen, Marie Antoinette, the king's sister Elizabeth, and hundreds of persons of rank and station went to their death. The victims of the guillotine in Paris amounted to seventy or eighty a day, and a sewer was constructed for the express purpose of carrying off the human blood. The Girondists were slain without mercy. Two hundred thousand suspected persons were cast into prison, and thence day by day brought out in tumbrels to the place of doom. It is shocking to record that women sat and knit as calmly as in the pit of a theatre while the fearful tragedy was being played out before their eyes.

329. During the height of the Reign of Terror all the

powers of the state were centered in a small body of Jacobins called the "Committee of Public Safety," foremost among whom were Danton, Robespierre, and Marat. Marat met a deserved death at the hands of Charlotte Corday, a young woman who came to Paris from Caen for the express purpose of assassinating him, — a purpose which she accomplished in his bath. Danton, thinking that the revolution had gone far enough, wished to bring back something like order. But the "sea-green" Robespierre had another thought; he determined to destroy his former friends, that he might stand alone on the dreadful eminence of terror. He succeeded in his attempt, and, as we shall see, was himself swallowed up in the same abyss.

330. In the spring of the year 1794 Robespierre became absolute ruler of the Convention, and he determined to exterminate the leaders of all parties. He therefore denounced on the one hand what were called the *anarchists* as enemies to the true welfare of the state, and on the other the *moderates* as lukewarm in the cause of liberty. Among the latter were Danton and his party: the leader himself, with most of his followers, went to the scaffold. Robespierre ruled by murder, and between June 10 and July 17, 1794, he sent 1285 persons to the guillotine in Paris.

331. At length, terrified by the rapidity, the impartiality, and the number of Robespierre's condemnations the members of the Convention resolved to rid themselves of the tyrant. No man's life was certain for a day. No man knew but that his name might be found upon the next list of victims. On the 27th of July, 1794, Robespierre was defied in the tribune, and with his brother and some of his accomplices arrested. A contest between the Assembly and the Jacobins of the city ensued: after many times inclining the other way, it was decided in favor of the Convention.

The leaders
and their
struggles.

Robespierre
master.

The reaction.

332. Robespierre, with some of his fellow-demons, had taken refuge in the Hôtel de Ville. In despair he attempted self-destruction with a pistol, but only fractured his jaw. He and his fellows were cast rudely into a cart and carried to the guillotine (July 28, 1794), where they suffered a part of the punishment due to their accumulated crimes.

333. The Reign of Terror was over. It is true that some of the Jacobin members of the Convention continued to advocate the principles of the revolutionary tribunals, and the *sans-culottes* attempted one or two insurrections. But the reaction had fairly set in. The people awoke as from a hideous dream. The prisons were opened, the living Girondists were recalled from exile, the laws of Robespierre were repealed, and the churches were again devoted to the worship of God.

334. While these things were passing in Paris, the campaigns against the allies, who had all along kept the field against the French, were eminently successful. All Flanders, the frontiers of Holland, and many strongholds on the Rhine, as also several places in Spain, submitted in 1794 to French commanders. And early in 1795 the French general Pichegru marched into Holland and took possession of Amsterdam. The stadtholder fled to England, and up to the close of the revolutionary wars Holland remained a dependency of France. Indeed, so successful were the French in the field, that in the year 1795 both Prussia and Spain made peace with them.

335. In this same year, 1795, France received a new constitution, — the third since 1789. Two legislative councils were decreed, — the *Ancients* and the *Five Hundred*. The executive power was vested in five Directors, and hence the name of the *Directory* is often given to this phase of French government. The Directors were to be chosen by the two councils, and each Director was to be in turn President for three months.

336. The Directory was not established without a struggle. The inhabitants of Paris were dissatisfied with the change proposed by the Convention ; Conflict for power. so the citizens by their Sections, or municipal divisions, joined battle with the Convention, supported by 5000 regular troops. The Sections, joined by the National Guards, mustered 40,000 men, and had at first the advantage. The Convention, however, gave command of the regular force to a general named Barras. He nominated as his second in command a young Corsican officer of artillery named Napoleon Bonaparte, of whom we shall soon hear a great deal.

337. Bonaparte pointed his cannon down all the streets by which the Tuileries could be approached, Triumph of the Directory. and when the assailants attempted to advance he mowed down the mass with grape-shot (October 4, 1795). This settled the matter : the Convention triumphed, and the new constitution and Directory stood on firm ground. With this ended the French Revolution, and here opened the wonderful career of Napoleon Bonaparte.

338. Napoleon Bonaparte was of Italian blood and name, and was a native of Corsica. Only two months Youth of Napoleon. before the birth of Napoleon (which took place in the year 1769) Corsica had given up its long struggle for independence and was incorporated with France, — so that he chanced to be born with all the privileges of French citizenship. He was the second son of Charles Bonaparte, a lawyer. At the age of ten he was sent away from home to the French Military School at Brienne. Here he spent over five years. At the end of that time the official report made of him was as follows : “ Distinguished in mathematical studies, tolerably versed in history and geography, much behind in Latin, belles-lettres, and other accomplishments ; of regular habits, studious and well-behaved, and enjoying excellent health.” In 1785 he received his commission as a sub-lieutenant of artillery.

339. When the Revolution broke out Napoleon took the popular side. He first comes to notice in connection with the siege of Toulon. That city had made a royalist uprising in 1793, and the garrison was aided by English and Spanish ships. The Republican general, Barras, made very little progress till Napoleon discovered a mode of converging his artillery-fire on the forts in the harbor, and the result was that Toulon soon fell. Barras recognized the ability of the young artillerist, and accordingly, when he was appointed to the command of the troops of the Convention to oppose the Paris Sections, he asked for Lieutenant-Colonel Bonaparte as his assistant. The part which Napoleon played on that occasion we have already seen.

340. In the new government of the Directory, which we saw formed in 1795, Barras was one of the five Directors. Now in the spring of 1796 the Republic organized three great armies to oppose the allied enemies of France. One army was given to General Moreau [*mor-o'*], another to General Jourdan'. The third, the army of Italy, through the friendly influence of Barras was conferred upon the young Corsican officer. He was twenty-six years of age, and had but just married Josephine, widow of the Count de Beauharnais [*bo-harn-ā'*], when appointed to this important command.

341. A strict following of chronology would require us here to enter upon the narrative of the campaigns that Napoleon now made in Italy, and of his subsequent campaigns, up to the close of the 18th century. But it will be much more convenient to treat the Napoleonic wars as a whole, which we shall be able to do in the next chapter. And, indeed, it is the appearance of Napoleon on the stage, rather than the mere date of the year 1800, that marks the close of the period under review. The booming of the cannon with which, on that October

day, in the year 1795, he stayed the on-coming of the Sections and secured the victory of the Directory, was the death-knell of the Revolution, and announced a great era of French, and indeed of European, history, in which himself was for twenty years to be the central figure. France had waded through revolution to a republic, but it was only to find herself in the hands of a master more despotic than any king that had ever sat upon her throne.

5. PROGRESS OF CIVILIZATION.

342. The details already given under the topics embraced in this chapter show that the 18th century was a period of wonderful changes, — Character of the century. a time when old ideas and old institutions were swept away in a manner that had never happened in any previous time.

343. The great characteristic of this period is the advance of democratic ideas. These ideas were Influence of French writers. first promulgated in systematic form in France, where about the middle of the 18th century a series of remarkable writers arose to doubt and question all existing beliefs and things. There were wits and philosophers and economists in this school; and its leaders were Voltaire, Rousseau, Montesquieu, Diderot, Condorcet, and the Encyclopedists. They attacked the State and the Church with bitter wit and telling arguments. They were not always wise men, nor were their motives always noble; but they did a needed work in what was, perhaps, the only way possible. They voiced a passionate desire, that swelled in the hearts of all the peoples, for those "inalienable rights" of which kings had robbed them.

344. These ideas, though first proclaimed as theory in France, were to find their earliest practical Democracy in America. embodiment in America. England itself was astir with the new thought, and in our own country was a

constituent part of the English people, whom the circumstances of colonial life had obliged in a great measure to exercise self-government,—so that, of all parts of the world the American colonies were the ripest for democracy. The influence of the French school of political and social philosophers upon the founders of our Republic is readily traceable, and the *Declaration of Independence* draws some of its inspiration from Rousseau's *Contrat Social*.

345. While France by her ideas influenced America, the reflex influence of America on France was prodigious. Here in the Republic of the United States was a living embodiment of the gospel of democracy. Here was a great self-ruling nation,—a government of the people, *for* the people, and *by* the people. French armies and fleets had fought to establish this government, and the reports from across the Atlantic, and the living voice of those who had shared the conflict, set the blurred brain of every poor French serf into activity.

346. The result of this ferment was the French Revolution,—that savage uprising of a people against the abuses of feudalism and the divine right of kings. That this deluge swept away much that was good cannot be doubted; yet it is equally certain that all the crimes and atrocities of the dreadful period between 1789 and 1795 were far more than counterbalanced by the permanent gains which liberty then made.

347. The influence of the French Revolution spread throughout all the nations of Europe. Even where there was no great political change there was a wide social change; and we may say, generally, that since that great popular upheaval there has been no part of Europe where the people have been so utterly down-trodden as they were before. If all the glittering dreams of French *Liberté*, *Fraternité*, and *Égalité* were not destined to be realized, one immense and perma-

ment gain there was: it was acknowledged that the people *have* rights, and ever since that time there have been slow yet steady advances towards the embodiment of these rights in the constitution of society and nations.

348. The literature of the 18th century is distinctively the literature of wit, which glitters in all kinds of composition, — letters, pamphlets, Literature. lampoons, essays, novels, and poetry. Nearly every celebrated writer had the talent of exciting laughter not only as a conspicuous talent, but as his most conspicuous. Pious Addison and pious Cowper had it, surly Dr. Johnson, good-natured Goldsmith, courtier Voltaire, and rustic Burns. Another century of ridicule may not occur again in history, but it was needed. Institutions, manners, and habits had become ridiculous and vicious, and they required to be laughed out of the world. (For the most eminent writers of the 18th century see “Great Names,” pages 437, 438.)

349. In pure philosophy the progress was not specially marked. In England Locke’s *Essay on the Human Understanding* had at the time a great Philosophy. repute; but the book has not held its place. Bishop Berkeley propounded a form of idealism, and Reid on the other hand put forth his system of Common Sense. The contributions of Hume have probably had a more lasting influence than those of any contemporary English philosopher. French philosophy was almost wholly of a negative and destructive character, — and hence had but a temporary influence. Far deeper were the metaphysical speculations which now began to engage the attention of some profound German philosophers. Among these the greatest name is that of Kant, whose system laid the basis of all subsequent German metaphysics.

350. The fine arts were cultivated assiduously during this century. It was now for the first time that England began to have native painters of Fine arts.

some eminence and originality. The chief names in the English school are Gainsborough, Sir Joshua Reynolds, and Benjamin West, the last of whom was born in this country. But the most notable fact in the artistic history of this period is the great advance in the art of music, which now began to take embodiment in truly grand compositions. It is sufficient to mention the names of Handel, Haydn, and Mozart. These great composers all belonged to the 18th century, and they were the fathers and founders of modern music.

351. The progress of science during this century was most striking. It was at this time that chemistry first took rank as a science. Black discovered carbonic acid gas; Cavendish, the composition of water, and the constituents of the atmosphere; Priestley, oxygen and more new substances than any other chemist; while the great French chemist, Lavoisier [*lä-vväs-yea'*], systematized and generalized all previous discoveries, adding also other important contributions.

352. The science of electricity may be said to have originated at this same time. Benjamin Franklin did much for this branch of investigation, both by theory and by experiment. He demonstrated the identity of natural and artificial electricity. Then came an accident that made the electric telegraph possible in our own time. The wife of Galvani, a professor in Bologna, had skinned some frogs, and noticed the twitching of the leg of one of them when the nerve came in contact with a piece of metal, — and this was the first observed manifestation of galvanism. To produce it Volta devised his pile, but in time a battery of plates of zinc and copper was found most convenient.

353. To enumerate even a tithe of the great scientific discoveries that render the 18th century illustrious is impossible here. It was then that

Other discoveries.

the basis of modern geology was laid. Botany, from a jumble of pre-existing observations, was by the genius of Linnæus first brought into systematic form. Comparative anatomy was created. The weight, form, and size of the earth were determined. Laplace collected and elaborated the mathematics of astronomy in his *Mécanique Céleste*; Sir William Herschel discovered Uranus (1781), and resolved the Milky-Way into distinct and separate stars. Adam Smith, in his *Wealth of Nations*, created the science of political economy, and thereby rendered mankind one of the greatest services.

354. Striking as are these advances of pure science, we are even more impressed by the mighty practical applications in the arts of industry which ^{Great inven-} science received at this time. At the right moment, when human undertakings became too vast for the hand and for primitive implements, Brindley, Watt, and Arkwright, and other great inventive geniuses, devised machinery to meet the requirements of the new industrial era. Navigable canals began to be made, and the genius of James Brindley proved that in the construction of these highways the most formidable engineering difficulties might be overcome. The manufacture of iron received an immense impetus by Roebuck's process of smelting by coal instead of charcoal. Machinery was applied to spinning and weaving cotton. The spinning-jenny was invented by Hargreaves in 1765, the spinning-frame by Arkwright in 1768, and the mule-jenny by Crompton in 1775. But the crowning achievement of the age was that of the Scotchman, James Watt, who though not actually the inventor of the steam-engine, so improved it as to place a new power in the hands of mankind. Probably no material service of equal value was ever rendered to humanity. Its use as a motive-power at once revolutionized all the processes of industry, and it soon drew after it, though not till early in the next century, steamboat naviga-

tion, railroad traveling, and a thousand other beneficial applications.

355. The following minor though important details of invention and industry will be found of interest: —

Other inventions.

Piano-forte: invented by an organist of Dresden in 1717; the instrument was not made in England until 1766.

Caoutchouc, or india-rubber: was brought to Europe from South America in 1730.

Stereotyping: William Ged of Edinburgh first practiced the art of printing from stereotype plates.

Chronometer: John Harrison (1736–1742), in response to a Parliamentary offer of a reward of £20,000, first constructed a clock which kept perfect sidereal or solar time, — invaluable in determining the longitude of ships at sea.

Umbrellas: in 1778 Joseph Hanway introduced one into England, probably from Spain.

Vaccination: Jenner made the first experiment of inoculating a child from a cow-pox pustule in 1796.

Hydraulic Press: invented by Bramah, an Englishman, in 1786; by this machine a slender column of water may be made to raise the heaviest weights.

Gas-lights: used by Murdoch in Cornwall in 1792, and in the foundry of Watt and Bolton in 1798; but gas was not used for street-lighting until this century.

Cotton-gin: Eli Whitney, an American, in 1793 made a machine for separating the fiber of cotton from the seed, and cleansing it with ease; this invention enormously increased the demand for cotton.

Lithography: was invented in Germany in 1796.

356. All great inventions are essentially democratic, that is, they tend to the benefit of the whole people. We therefore mark, during the 18th century, a perceptible rise in the condition of the European masses. It is true, there was a terrible amount of squalid poverty and deplorable ignorance, as there still is; but, as a whole, things were on the mend. The poorer classes received an amount of consideration which they never knew before;

Improvement of the masses.

while they inevitably shared in the advantages, improvements, and inventions created by capitalists, in bringing more of the comforts of life within their reach. Public libraries, mechanics' institutes, clubs, co-operative societies, and Sunday-schools were now first established. It is a fine proof of the enlarging humanity of the age, that there now arose a considerable number of men who devoted their lives to the amelioration of the condition of the poor, the down-trodden, and the criminal. John Howard is famous for his labors for the reform of prisons in England. Thomas Clarkson and William Wilberforce are honored as the leaders of the party which did away with the slave-trade in the English colonies. Sir Samuel Romilly is distinguished for his efforts to improve the English penal laws, at that time the most severe in Europe.

357. It is worthy of note, that towards the close of this century men began to lay aside the elaborate fripperies of dress—the hanging cuffs and lace ruffles, the cocked hats, wigs, buckles, and swords—that had previously constituted the costume of a gentleman, and took to a sensible attire, fit for our work-a-day world. Gentlemen turned their attention to more useful occupations than roistering, drunkenness, and gallantry. The occupation of a merchant or a manufacturer became honorable, and the morality and decorum of the higher classes had a beneficial effect upon the habits of the common people.

Reform in
dress.

GREAT NAMES OF THE EIGHTEENTH CENTURY.

PHILOSOPHERS AND SCIENTISTS.

- Swedenborg** (1688–1772), a Swede — distinguished for scientific and religious speculations — believed himself favored with special revelations — wrote voluminously on apocalyptic subjects — his doctrines still followed by members of the New Church.
- Benjamin Franklin** (1706–1790), an American philosopher and statesman — his public career well known — established the identity of lightning with electricity, and contrived lightning-rods — published two volumes of essays, with an autobiography.
- Linnaeus** (1707–1778), a Swedish botanist — simplified and popularized botany — introduced a new system of classification by stamens and pistils.
- D'Alembert** (1717–1783), an eminent French scientist — principal contributor to the famous French *Encyclopædia*.
- Hunter, William and John** (1718–1783, 1728–1793), brothers, born in Scotland — both distinguished as anatomists — two of the greatest surgeons that ever lived.
- Adam Smith** (1723–1790), a Scotchman — professor in Glasgow University — chief work, the *Wealth of Nations*, by which was founded the science of Political Economy.
- Kant** (1724–1804), a German metaphysician of the first rank — his great work, *The Critique of Pure Reason*, which is a review and reconstruction of the whole theory of human knowledge.
- Priestley** (1733–1804), by profession a Unitarian minister, but by nature a priest of science — discovered oxygen — a voluminous writer — sympathized with the French Revolution, for doing which his house, library, and valuable apparatus were burned by a mob.
- Galvani** (1737–1798), an Italian physician — discovered that part of electricity known as galvanism.
- William Herschel** (1738–1822), a great astronomer — came to England as a bandman in the Hanoverian Guards — improved the reflecting telescope — discovered Uranus in 1781.
- Lavoisier** (1743–1794), one of the greatest French chemists — devised the improved chemical nomenclature — first introduced the balance into chemical analysis — was guillotined during the French Revolution.
- Bentham** (1747–1832), a political philosopher, and juridical reformer —

one of the deepest thinkers England ever produced — was the author of *Utilitarianism* — chief works, *The Principles of Morals and Legislation*, and *Evidence and Penal Legislation*.

Laplace (1749–1827), a celebrated French mathematician — author of the *Mécanique Céleste*, a work that produced as great a sensation in the scientific world as Newton's *Principia*.

WRITERS.

Jonathan Swift (1667–1745), Dean of St. Patrick's, Dublin — an eminent political writer — chief work, *Gulliver's Travels* — wrote verses also — very sarcastic — died mad.

Addison (1672–1719), educated at Oxford — much engaged in politics under Anne and George I. — famous for his prose papers in the *Spectator* — wrote also *Cato, a Tragedy*, *A Letter from Italy*, and other poems.

Alexander Pope (1688–1744), the son of a London linen-draper — wrote good verses at twelve — chief works, the *Essay on Man*, *The Rape of the Lock*, a short mock-heroic poem, and a translation of Homer into English verse — lived chiefly at Twickenham on the Thames — deformed, sickly, and peevish.

Richardson (1689–1761), one of the founders of English novel-writing — his chief works, *Pamela*, *Clarissa Harlowe*, and *Sir Charles Grandison* — they are now regarded as tedious and sentimental.

Montesquieu (1689–1755), an eminent French thinker — born near Bordeaux — president in the parliament of that city — chief works, *Lettres Persannes*, *Esprit des Lois*.

Voltaire (1694–1778), the greatest of French wits and satirists — author of the *Henriade*, the only French epic poem — among his historical works are the *Age of Louis XIV.*, *History of Charles XII.* — wrote numerous plays and minor poems — lived his last twenty years at Ferney in Ain — an enemy of the Christian faith — his mission was to destroy.

Buffon (1707–1788), born at Montbard in Burgundy — a great naturalist — chief work, his *Histoire Naturelle*.

Fielding (1707–1754), the greatest of the English novelists of the 18th century — his chief works, *Tom Jones*, *Jonathan Wilde*, and *Joseph Andrews*.

Samuel Johnson (1709–1784), born at Lichfield — lived generally in London — chief works, *The Lives of the Poets*; *Rasselas, an Eastern Tale*; an *English Dictionary*; and a poem called *London*.

David Hume (1711–1776), a Scotch philosopher and historian — chief

work, *History of England* — held the strange doctrine that we can be sure of nothing — wrote a *Treatise on Human Nature* and *Essays*.

Rousseau (1712–1778), born at Geneva — son of a watchmaker — a skeptic in religious matters — author of many operas and eloquent literary works — obliged to leave France on the publication of his *Contrat Social*, an essay which maintains the equal rights of all men.

Sterne (1713–1768), prince of English humorists — author of *Tristram Shandy* and *The Sentimental Journey*.

Oliver Goldsmith (1728–1774), born in Ireland — in early life regarded as an idiot — rose, however, to be a famous writer — best-known works, *The Vicar of Wakefield*, *Deserted Village*, and *She Stoops to Conquer* — marked by charming simplicity of style, tenderness of sentiment, and racy description.

Lessing (1729–1781), a German critic and playwright — chief works, *Laocöon* and the Tragedy of *Emilia Galotti* — a very profound and suggestive thinker.

Edmund Burke (1750–1797), born in Dublin — a famous orator — chief works, *An Essay on the Sublime and Beautiful* and *Reflections on the French Revolution*.

Edward Gibbon (1737–1794), born in Surrey — chief work, *The Decline and Fall of the Roman Empire*, in six volumes, written in twelve years.

Robert Burns (1759–1796), an Ayrshire farmer — famed for his lyric poems — author of the *Cotter's Saturday Night* and *Tam O'Shanter*.

Schiller (1759–1805), a distinguished German poet and prose writer — made Professor of History at Jena in 1789 — the great dramatist of Germany — chief works, *William Tell* and *Wallenstein* — wrote also a *History of the Thirty Years' War*.

ARTISTS.

Handel (1684–1759), an illustrious German musical composer — very precocious as a boy — visited England in 1710, and remained there during the most of his subsequent life — his most famous oratorios are *Israel in Egypt*, *The Messiah*, and *Judas Maccabæus*.

Sir Joshua Reynolds (1723–1792), born in Devonshire — the first President of the Royal Academy — a famous portrait and historical painter — published *Discourses on Painting* — a great friend of Dr. Johnson.

Thomas Gainsborough (1727–1788), born in Suffolk — a fine painter of English landscapes — lived in Ipswich, Bath, and London.

Haydn (1732-1809), born near Vienna — a great musical genius — father of modern orchestral music — greatest work, *The Creation*, an oratorio.

Benjamin West (1738-1820), born in America: President of the Royal Academy; a distinguished historical painter.

Mozart (1756-1792), a great German musician — lived much at Vienna — chief works, *Don Giovanni*, and the celebrated *Requiem*, the latter written on his death-bed — died of fever, December 5, 1792, aged 36.

Canova (1757-1822), a celebrated Italian sculptor — famous for many very beautiful statues.

INVENTORS.

James Brindley (1716-1772), native of England — engineer of the canal made by Duke of Bridgewater from Worsley to Manchester, and hence the founder of canal navigation.

Hargreaves (1730-1778), born in England — the inventor of the carding-machine as a substitute for carding by hand — produced the spinning-jenny in 1765 — was persecuted by the ignorant of his time.

Josiah Wedgwood (1731-1795), the great improver of our porcelain manufacture — the son of a Staffordshire potter — inventor of the "Queen's ware," made of white Dorsetshire clay mixed with ground flint.

Sir Richard Arkwright (1732-1792), born at Preston, Lancashire — originally a hair-dresser — invented the spinning-frame, by which hand-labor is saved in the cotton-mills — hence may be called the founder of the cotton manufacture.

James Watt (1736-1819), native of Greenock — invented the double-acting condensing steam-engine, and applied it to machinery — lived first in Glasgow, and then in Birmingham.

Jacquard (1752-1834), born in France — at first employed as a plaiter of straw — the inventor of the loom for figured weaving — at first encountered much opposition among manufacturers, but his machine was soon in great demand.

Crompton (1753-1827), the inventor of *the mule*, a machine that greatly facilitated the spinning of yarn.

Robert Fulton (1765-1815), an American engineer — studied in England the adaptation of the steam-engine to boat-propulsion — applied his knowledge in the construction of the first large steam-vessel, which made its trial trip on the Hudson in the year 1807.

CHAPTER V.

GREAT EVENTS OF THE NINETEENTH CENTURY.

1. THE CONSULATE AND THE EMPIRE.

358. We have now come to a period that is in the strictest sense modern; for when we speak about the period and its character. the *Nineteenth Century*, we are speaking about our own times, and many persons who are now alive saw the beginning of this period. It is an age crowded beyond all the ages of history with great events, — an age fuller, richer, and more varied than was ever seen before.

359. There are several broad facts that stamp the 19th century with this peculiar character. Thus: First, the

struggles waged in this period are no longer struggles of the kings with one another, but struggles between the *kings and the peoples*. This fact alone ^{Reasons of this peculiarity.} has served to work a complete change in the politics of Europe. But, secondly, new problems of a political and social nature have arisen, such as the questions of democracy, of representative government, of national unity, of the rights of labor, etc. ; and these have made a wonderful stirring in the spirits of men. Third, The historic stage is enlarged to embrace the whole world, since, on the one hand, new nations have arisen in distant and hitherto unsettled regions, and, on the other, the old lands of Asia and Africa have shown a marked awakening, and have again begun to count for something in the world's history, after lying dormant for ages.

360. The first of our topics is the career of Napoleon, because for fifteen years he was the great central figure not only in the history of France, ^{Topic here treated of.} but in the history of Europe.

361. In the last chapter the narrative of events in France was brought up to the establishment of the government under the Directory, in 1795. This is ^{Retrospect of events.} known as the *Constitution of the Year III.** It was the third constitution France had received since the outbreak of the revolution, the first being the Constitution of 1789 (a Constitutional Monarchy, formed by the National, or Constituent, Assembly), and the second, the Constitution of September, 1792 (a Republic, formed by the National Convention). The establishment of the republican government

* The "Year III.," because the NATIONAL CONVENTION when, in 1792, it abolished the monarchy and declared France a Republic, also reformed the calendar, decreeing that the new chronologic era should date from the establishment of the Republic, September, 1792. The year 1795 of the Christian chronology was therefore the "Year III." of French antichristian chronology.

under the DIRECTORY may be regarded in some sense as the close of the French Revolution ; for, though there were many subsequent changes, all these changes were effected by the *Government*, or its armies, *without the interference of the people*.

362. It has already been seen that the French Revolution, which was at first *political* (that is, concerned with the internal constitution of the French government and society), afterwards became *military*, or aggressive, because the European sovereigns, fearful of its consequences in their own dominions, attacked it. The year 1792 saw the *First* of that series of *Coalitions* against France into which nearly all the powers of Europe were successively drawn. This war was still going on when, in 1795, the management of affairs fell into the hands of the Directory, under the Constitution of the Year III. In the spring of 1796 they fitted out three great armies, and the command of the army of Italy was, as we have seen, assigned to the young general, Napoleon Bonaparte.

363. The Republic under the Directory lasted for four years, 1795 - 1799, when it came to an end, and the *Consulate* was established, with Napoleon as First Consul and real master of France. The series of events by which this change was brought about is presented in the following synoptical view, which shows side by side the military operations of Napoleon and the course of affairs under the Directory :—

THE DIRECTORY, 1796 - 1799.

1796: The Directory organized three armies,—two, under Jourdan and Moreau, to operate against Germany ; and the third, under Napoleon, to operate against the Austrians in Italy. The armies of Moreau and Jour-

NAPOLEON, 1796 - 1799.

1796: *Italian Campaign.*—Napoleon, being appointed by the Directory to the command of the army of Italy, went, in March, 1796, to his headquarters at Nice, where he found an ill-fed, half-clad army of 36,000 men. He

dan, uniting in Germany, forced the Austrian army, under the Archduke Charles, to retreat beyond the Danube. But the Archduke Charles then took the offensive, and defeated Jourdan, while Moreau saved himself only by a rapid retreat through the Black Forest and over the Rhine (August). An ill-concerted expedition under General Hoche was sent to invade Ireland, towards the close of the year. He returned without accomplishing anything.

was to operate against the Austrians in Italy, where they had a force of 60,000 men. He entered Italy by a series of skillful manœuvres. "Two standards, fifty-five pieces of cannon, five victories, 15,000 prisoners, and peace with the Piedmontese were the results of a campaign of fifteen days." In May Napoleon won the brilliant victory of the Bridge of Lodi and entered Milan. He next attacked the Austrian army under Wurmser, as it marched, divided, along the banks of the Lago di Garda, — falling upon the divisions separately and overwhelming them at Castiglione, Roveredo, and Bassano (August and September). Two months afterwards he had to meet, with his feeble remnant of an army, a new Austrian force of 60,000 under Alvinzi. But Napoleon was victorious at the bridge of Arcola (near Verona), and as the result the third Austrian army was driven out of Italy.

1797: The Directory found itself greatly embarrassed in the attempt to rule France. The elections proved more favorable to the reaction than to the Republic. The government accordingly determined to maintain its position by force. Troops were brought to Paris; several members of the Five Hundred and of the Ancients were arrested, and two of the Directors, Carnot and Barthélemy, were banished; so

1797: Wurmser, beaten the previous year, still lay at Mantua, where Napoleon besieged him. The Austrians sent a fresh force of 65,000 under Alvinzi across the mountains to the relief of Mantua. Napoleon, reinforced to 45,000 men, beat this army at Rivoli (January), and took Mantua. He then advanced to the Adriatic, captured Venice (in consequence of hostilities against the French), and overthrew her ancient inde-

that there were but three Directors in place of five. This violent movement is called the "Revolution of 18th Fructidor" (September 4, 1797).

pendent government. He next crossed the Alps through the Tyrol into Carinthia and Styria, making for Vienna; but, in consequence of the French army operating in Germany (under Moreau and Jourdan) having been driven back out of Germany by the Archduke Charles, Napoleon's base of operations was threatened by the advance of the Archduke Charles into the Tyrol. He therefore ceased his advance against Vienna. The Austrian emperor was glad to negotiate for peace. The Treaty of Campo Formio (October, 1797) ended the campaign. France obtained possession of Milan, Mantua, Modena, Ferrara, Bologna, Corfu, Zante, and the whole of the Austrian Netherlands. France ceded Venice to Austria.

1798: The Directory had now to meet a *Second Coalition* against France, consisting of England, Russia, and Austria. Things went badly for the French. Italy, the reward of Napoleon's brilliant campaign, was recovered by the Austrians, aided by the Russians. The finances were in the worst possible condition. The forced conscription ordered by the government disgusted all classes. The appeal to the military by the Directory made them feel their power, and the army began to long for the strong hand of a martial master. The members of the Directory were terrified,

1798: Egyptian Campaign.— Napoleon, returning at the close of 1797 to France after this brilliant campaign, became the hero of the French people. The Directory began to fear his popularity and ambition; but for some months he lived very quietly with Josephine in Paris. Napoleon then proposed an invasion of Egypt as a means of attacking the commerce and power of England in the East. The remoteness of the expedition influenced the jealous government in giving him the command. With an army of 40,000 veterans, he landed at Alexandria;

and resigned or changed their places.

and captured it (July). He then overthrew the Mamelukes in a brilliant action, the "Battle of the Pyramids" (July 21), which opened to the conqueror the gates of Cairo and made him master of Egypt. While Napoleon was thus engaged, the whole of his vast fleet, anchored in Aboukir Bay at the mouth of the Nile, was totally destroyed by the English fleet under Nelson ("Battle of the Nile," August 1). Thus left in Egypt with his army, and deprived of the vessels upon which he had relied for his return, Napoleon, undismayed, saw the commencement of his Oriental career.

1799: With the armies of the Coalition threatening the soil of France, and the demoralized state of things at home, the murmurs of the people grew louder and louder, and the government was blamed for having, in what was called the *banishment* of Napoleon, deprived France of the only man who was equal to the occasion.

1799: Advancing from Egypt, through the desert of Arabia Petræa, into Palestine, he took Gaza, and at the foot of Mount Tabor defeated the Turks with enormous slaughter (April); but he received a check in the siege of Acre (defended by the Turks and a body of English marines under Sir Sydney Smith); so that he had to return to Egypt after losing half his army (July). Here, however, he won a brilliant victory over the Turks at Aboukir. Finding now that matters were in great confusion in France, Napoleon, without consulting the wishes of the home government, left the army in command of Kléber, and, embarking secretly on a French frigate (August), returned to France (October).

364. When, in October, 1799, Napoleon suddenly returned to France from Egypt, he found the state of affairs in a condition similar to that in which Cæsar found Rome on *his* return from Egypt. The Republic had broken down. Anarchy prevailed. The Directory was without any support in public opinion. To concentrate the executive power in a single individual needed but one act of daring. Napoleon felt that his was the genius to conceive and execute so bold a deed.

365. The Council of Five Hundred and the Council of Ancients had been summoned to assemble at St. Cloud [*clou*] on the 10th of November, 1799. On that day General Bonaparte, who had been appointed to the command of all the troops, entered the Chamber of the Ancients, and protested against the Constitution under which they were formed. Leaving the senators overwhelmed with surprise, he proceeded to the Council of Five Hundred, accompanied by about twenty officers and grenadiers. He reproached the members vehemently with their misrule, refused to swear to the Constitution, and declared the Directory an incompetent body. But he was received with cries of "Outlaw him! Down with the Dictator!" and, unaccustomed to scenes like this, he retired abashed. Then mounting his horse he harangued the troops, who saluted him with acclamation. "Soldiers, can I count upon you?" cried the new candidate for empire. "Yes, yes," was the reply; and Murat with a company of grenadiers cleared the hall of the Assembly, drowning all remonstrance by the rattle of the drums.

366. The Constitution of the Year III. was at an end. What should now be the government of France? Nature of new government. There was at that time in Paris a certain Abbé Sieyès, a leader in politics, and a great constitution-monger. He had a new constitution all ready, and it was adopted. The new government was a *Consulate*. There were to be

three Consuls, — a First Consul, and two assistants. The First Consul, it is needless to say, was Napoleon. The two other Consuls, Sieyès and Ducos, it is equally needless to say, were mere clerks to register his decisions. The First Consul was to have the patronage of all the offices of administration, of the army and navy, and of the magistracy, the promulgation of laws, and the declaration of peace and war. It is true, France preserved the *show* of a Republic (as did Rome under Cæsar), and provisions were made in the new Constitution, called the “Constitution of the Year VIII.,” for a senate, legislative body, etc.; but in reality Napoleon was master of France.

367. Napoleon immediately began to assert his power : he placed newspapers under the severest restrictions, shut up political assemblies through-
Doings of Napoleon. out the Republic, and filled France with detectives ; but at the same time he improved the financial condition of the country by establishing the Bank of France and removing restrictions from trade ; while, aware of the national taste for show, he gathered into the ball-rooms of the Tuileries crowds of handsome soldiers and lovely women. At the same time he bent his energies to the raising of troops, and a quarter of a million of conscripts were soon marshaled beneath his banners.

368. And he needed these troops ; for, though he succeeded in detaching Russia from the Coalition, yet England rejected his overtures of peace, and Austria was still against him. Indeed, England, Austria, and most of the European powers still acknowledged Louis XVIII. as the only legitimate authority in France, and regarded Bonaparte as a usurper. The “usurper,” however, felt every inch a king when he put on his cocked hat and plain gray riding-coat, and summoned his legions to follow him once again to victory on the plains of Italy. It was here that he proposed to humble Austria.

369. In the spring of the year 1800, having by artful manœuvres made his enemy believe that he intended attacking Germany by the open passage of the Rhine, he secretly led his army across the lofty summits of the Alps, and poured like an avalanche into the valley of the Po. The Austrians — two or three times his own numbers — had chosen the great level of Marengo as the field of battle, and there fell upon the French on the march, June 14, 1800. It was the most brilliant, but at the same time the most bloody, of Napoleon's earlier battles, and resulted in the complete defeat of the Austrians, who were driven beyond the Adige and the Brenta. Five weeks after he left Paris he made his re-entrance into that enraptured city. In November of the same year Moreau, whom Napoleon had sent to the Rhine, defeated the Austrians at Hohenlinden. These successes were followed by the treaty of Luneville, February, 1801, by which Austria ceded to France Belgium and the left bank of the Rhine.

370. There was now peace around all the borders of France except the sea. There the English ruled supreme. In order to destroy this supremacy, Napoleon worked in the Northern courts until he united Russia, Sweden, Denmark, and afterwards Prussia, in a formidable league against England and her ships. But Nelson, sailing into the harbor of Copenhagen, crushed the naval power of Denmark in four hours (April 2, 1801). A few days earlier Paul of Russia, the enthusiastic admirer of Napoleon, was strangled by conspirators. So the giant league melted into nothing, and as, at the same time, the British overwhelmed the remnant of the French force in Egypt, the First Consul was willing to make peace. This was arranged between France and England by the Treaty of Amiens, March, 1802. The peace was, however, only a breathing-spell, for neither party trusted the other.

371. That Napoleon had the entire confidence of France

was proved by a decree of the senate (August, 1802), proclaiming him First Consul for life ; the votes of the people all over the land ratified the change. Napoleon's reforms.

And his own conduct showed that, to the best of his knowledge, Napoleon had the good of France at heart. He set his best lawyers to work arranging the laws of the land. These were simplified and condensed into what is called the *Code Napoléon*, and France still enjoys the benefit of this valued legacy. Every department of government received its portion of care ; public instruction, the administration of justice, commerce, industry, roads, courts, arsenals, were placed on an excellent footing, and the Legion of Honor became the first step towards the creation of a nobility.

372. It was England that again provoked hostilities, by issuing letters of marque, and imposing an embargo on all French vessels in English ports (May, 1803). Hostilities renewed. Napoleon, in retaliation, seized upon all English and Dutch subjects sojourning in the territories of the Republic. In the months of May and June the French armies took possession of Hanover, and menaced England with invasion. Russia and Austria then coalesced with England.

373. Napoleon, taking advantage of this crisis, contrived with admirable diplomacy to have himself solicited by the senate to exchange the Consulship for the Imperial Crown. On the 18th of May, 1804, a decree was passed giving him the title of Emperor, and this elevation was ratified by the popular vote of France, only about 4000 names being recorded against it. The Pope, Pius VII., was invited to France to crown the newly elected Emperor. At Notre Dame, on the 2d of December, 1804, the ceremony of coronation was performed. The Pope blessed the crown, and Napoleon, taking it from the altar, placed it on his own head. He next passed into Italy, similarly to ratify his royal authority, and in May, 1805, was proclaimed

King of Italy, and was crowned at Milan with the iron crown of the Lombards.

374. In order to break the force of the English, Austrian, and Russian coalition, the Emperor Napoleon, His plan of campaign. in the spring of 1805, formed a prodigious plan of campaign. It was to begin with the invasion of England, for which immense preparations were made at Boulogne.

375. While these were still going on, Napoleon heard Operations in Germany. that the Austrian army, 200,000 strong, was moving towards the Rhine, and that the Russian army was on the march to join it. He immediately left Boulogne, and crossing the Rhine with an army of 160,000 men, advanced to Ulm, where he forced the Austrian General Mack to surrender with 30,000 men (October, 1805). A few days afterward he entered Vienna in triumph. Passing beyond the capital to Aus'terlitz he gave battle to the united Austrians and Russians, whom he utterly defeated, inflicting on them a loss of 15,000 dead, 20,000 prisoners, forty standards, and two hundred pieces of artillery, December 2, 1805. The next day Francis II. of Austria came to the tent of Napoleon to ask for peace. The request was acceded to, and a treaty was made; but it cost the House of Hapsburg the loss of twenty thousand square miles of territory, and two millions and a half of subjects.

376. In the mean time an event had happened that forever put a stop to Napoleon's design of invading England. Trafalgar. The fleet which the Emperor had counted on to protect his transports in crossing to England was chased up and down the seas by the British, and finally, with the ships of his ally, Spain, was blockaded in Ca'diz. Lord Nelson lay hard by, watching them, and when, three weeks after Napoleon crossed the Rhine, the French and Spanish fleets came out, he attacked them off Cape Trafalgar' (October 21, 1805), and annihilated them. Nelson died in the arms of victory, the French Admiral Ville-

neuve committed suicide, and Napoleon never again attempted to dispute the dominion of the sea with England.

377. This was a severe blow, but the fruits of Napoleon's own wonderful victories in Germany remained. Changes in Germany. And one result of his triumph was a great change in the Constitution of Germany itself. Napoleon raised the Electors of Bavaria and Würtemberg to the rank of Kings; and in the following year (1806) the Kings of Bavaria and Würtemberg, the Elector of Baden, the Landgrave of Hesse and the princes formally declared themselves separated from the German Empire. They were formed into a league called the *Confederation of the Rhine*, with Napoleon as their "protector," and undertook to aid him in war with an army of 60,000 men. Francis II. resigned the Imperial Crown in the same year (August 6), taking the title of *Emperor of Austria*, so that Germany was no longer, even in name, a united state acknowledging a common head. Thus it was that the "Holy Roman Empire" came to an end.

378. At this time Napoleon began to give away kingdoms. Seizing Naples early in 1806, he made his brother Joseph king. Turning the Netherlands ("Batavian Republic") into the Kingdom of Holland, he placed its crown on the head of his brother Louis.* Napoleon as a king-maker.

379. In the struggle of Germany with Napoleon, Prussia had hitherto, out of selfish motives, taken no part. But its turn now came. By gross insults Napoleon stung the Prussian King, Frederick William III., into war, when Prussia was most unfit for a struggle. Then he threw forward his armies with his usual marvelous promptitude, and in two great battles, — Auerstadt [*our'stat*] and Jena [*yea'nä*], — fought upon the same day Napoleon invades Prussia.

* The father of the late Emperor Napoleon III. (Louis Napoleon).

(October 14, 1806), he utterly crushed the military power with which, but half a century ago, the Great Frederick had wrought such marvels. Prussia lay writhing at his feet, and Bonaparte entered Berlin in triumph.

380. What remained of the Prussian army now joined the Russians on the Prussian frontier. At Eylau and Jena. Eylau [*i'low*] (February, 1807) a battle was fought of which nothing in particular came. But in June of the same year there was another battle, fought at Friedland, in regard to the results of which there could be no doubt, for the Russians were defeated with a loss of 60,000 men. The Czar now sued for peace, which was made by the *Treaty of Tilsit* (July, 1807).

381. The terms of peace were terribly severe to Prussia : she had to resign Saxony, Westphalia, and Prussian Poland ; and the conqueror, in his character of king-maker, elevated his third brother, Jerome, to the crown of the newly formed *Kingdom of Westphalia*.

382. The reaction now began. Having driven the royal House of Bragan'za from Portugal to Brazil, and having deposed the Bourbons from the throne of Spain, he set up his brother Joseph, in place of the latter, as King of Spain. Murat was promoted to fill Joseph's vacant throne at Naples. This appropriation of Spain was the commencement of a struggle in which the British, under Wellington, first assumed an important part in the military operations of Europe. Joseph was driven out of Madrid, and the French were compelled to evacuate Portugal. These reverses compelled Napoleon to take the field in person, and his genius soon restored the French prestige in the Peninsula (1808). But no sooner had he conquered in one direction than he was menaced in another. He had conquered all Europe, and all Europe was arrayed against him. It was Austria this time that menaced his power.

383. Austria had never looked on the result of the battle of Austerlitz as final, and was resolved to re-
 cover her lost territory. So, while Napoleon ^{The Wagram campaign.} was occupied in Spain, the Emperor, Francis II. of Austria, mustered half a million soldiers, and committed the command to the Archduke Charles. On the receipt of this intelligence, Napoleon quitted Spain and took the command on the Danube (May, 1809). Combats took place at Aspern and Essling, which on the whole were favorable to the Austrians; but in the decisive battle at Wagram (July 5, 1809) Napoleon was completely successful, and Austria purchased peace by a large surrender of territory.

384. The treaty of peace, called the *Peace of Vienna* (1809), was followed by negotiations for the hand of ^{The Austrian} Maria Louisa, Archduchess of Austria; and ^{marriage.} in the following year, Napoleon, having divorced the faithful Josephine, married that princess. His hope in this marriage was, that an heir might be born to him, and this hope was realized in the birth of a son, afterwards known as the Duke of Reichstadt.*

385. In the year 1811 Napoleon was at the height of his power, and his position at this time is well ^{Napoleon touches the zenith.} worth marking. The French Empire over which he ruled extended from the borders of Denmark to those of Naples. Holland, Naples, and Westphalia were ruled by his kinsmen. His brother Joseph was on the throne of Spain, though not very secure there. Bernadotte, one of his generals, had been chosen Crown Prince of Sweden. As Protector of the Confederation of the Rhine he held the German states in subjection, as he did also the Helvetic Confederation, into which he had formed the cantons of Switzerland; Austria and Prussia crouched at his feet, and Russia seemed his firm ally. Yet in a short time

* See p. 468.

all this was changed. "The magician's wand was broken, and his magnificent theater of action had sunk into a little house and garden far out in the tropic sea."

386. The beginning of Napoleon's disasters was the war which he commenced with Russia in 1812. *Invasion of Russia.* This arose out of Napoleon's dissatisfaction at the Czar's having opened his ports to British goods. As usual, Napoleon assumed the aggressive. Assembling a vast army, he crossed the Niemen (June, 1812) with 500,000 men, and headed his columns towards Moscow. The Russians gave battle at Borodino (September 7), and were defeated, but fell back in good order towards Moscow, — the Russian strategy being to lure Napoleon into the interior of the country.

387. On the 14th of September the French entered the ancient capital of Russia, and beheld the towers of the Kremlin and the fantastic spires of Moscow. *The French in Moscow.* But when they entered the city, it was silent and empty, — an enchanted city, and all their own. Exulting in their plunder and security, they spread hither and thither, and proceeded to pass the night in revelry. But in the midst of their merriment the city was found to be in flames. The Russians, knowing no other means by which to deprive their foes of winter-quarters and provisions, had set fire to their ancient and beautiful capital, which after four days sank into a heap of ashes, leaving the conquering legions alone with famine and desolation.

388. Retreat was all that now remained for the Emperor. *The retreat.* It began on the 19th of October. We shall not describe the horrors of this journey, in which the French were perpetually harassed by flying bodies of Cossacks, were starved, were frozen, and were left to die by the wayside. It is calculated that 125,000 perished in battle; that 130,000 died of fatigue, hunger, and cold; and that 190,000 were made prisoners.

389. At Smorgonoi (December 5) Napoleon abandoned the wretched phantom of the grand army and set out in a sledge for Paris, which he reached Events to battle of Leipsic. on the 18th. He knew that the struggle was to be one of life and death. All the powers of Europe now combined against him. In the Peninsula Wellington had in the mean time defeated Napoleon's marshals and had entered the South of France. Nevertheless, the Emperor was still far from despairing. With incredible energy he marshaled a fresh army, and marched to the banks of the Elbe. He defeated the Prussians and Russians at Lützen, and again at Bautzen, in May, 1813. But these victories were of little use to stem the great tide of enemies which had set in towards Paris, for the Austrians and the Bavarians had joined the coalition against him. Battle after battle was fought, until he made his final stand at Leipsic. The combat there was a crushing defeat to Napoleon, who lost upwards of 70,000 men (October 16-18, 1813).

390. The great allied host was now advancing in all directions towards the frontiers of France. Events up to Elba. Napoleon summoned all his energies to meet the crisis, and amazed his enemies by the rapidity of his movements and the fertility of his resources. At last he made a false move: he dashed to the rear of the allies, in the hope that they would retreat in terror; but instead of this they marched direct upon Paris, which was surrendered without a struggle (March 31, 1814). Napoleon, who came up too late to save his capital, rode away to Fontainebleau [*fon-tain-blo'*]. Two days afterward he was deposed by a decree of the senate; on the 4th of April he signed his abdication, and on the 20th he set out for the little island of Elba, which was now to be all the sovereignty of the once mighty potentate.

391. The Bourbon Dynasty was now restored in the person of Louis XVIII., the brother of the guillotined king.

But Louis XVIII. was indeed a Bourbon,—“one who forgot nothing and who learned nothing.” Indeed, so unpopular did he make himself, that soon all hearts began to turn once more to the exile of Elba. And he was now to startle Europe with a new appearance on the stage.

392. After ten months in Elba, Napoleon escaped. Landing near Cannes [*can*], he pushed on to Paris, being joined by a small body of troops, and reached the capital without firing a shot. Louis XVIII. fled to Ghent. At this time a congress was sitting at Vienna, and the task of reconstructing the map of Europe, so roughly disturbed by Napoleon, was going merrily on when the news came. The news is said to have been greeted by the assembled diplomatists first with a silent stare of incredulity and then with a roar of laughter.

393. But Napoleon was in Paris, levying troops; action must be prompt and decisive. The allies immediately declared Bonaparte an outlaw, and poured their armies toward France. Resolving to deal first with the enemies nearest to him, Napoleon invaded Belgium, where lay the English and Prussians under Wellington and Blücher.

394. The result of this campaign is told in a single word,—WATERLOO! This decisive combat took place on the 18th of June, 1815. It was an overwhelming defeat to the French, and Napoleon hastened to Paris to announce that all was lost.

395. On his arrival he found himself no longer treated as a sovereign: his star had set, and as in his grandeur he had made the best interests and liberties of France subservient to his own glory, so now he was cast aside that the nation might be cared for. On the 22d of June he signed his second abdication, and the allies, entering Paris on the 7th of July, reinstated Louis XVIII.

as King of France. Napoleon now sought to escape to the United States ; but this he could not do, as the British cruisers watched all the coast. On the 15th of July he went on board a British ship, having previously written to the Prince Regent of England, to say that "he came like Themistocles to claim the hospitality of the British people, and the protection of their laws."

396. But the British government regarded him as a tiger who was better chained than free, and orders were sent to carry him to St. Helena. St. Helena and death. The ship reached the lonely rock in October, 1815, and there he lived for six years. His death took place May 5, 1821 ; and his last words, as he lay dying amid the crash and glare of a tropical thunder-storm were, *Tête d'armée !* ("Head of the army!")

397. The character of Napoleon Bonaparte has been matter of great discussion and of most opposed opinion ; and this necessarily so, since, in the His character. judgment of lives, men differ so widely in their *basis* of judgment. Viewed purely from an intellectual standpoint, as a man accomplishing worldly ends by worldly arts, — by generalship, by faculty of combination, by administrative genius, — he was undoubtedly the greatest that ever lived. But as a *character* he was neither good nor in the highest sense great ; for he was not great enough to be above *self*. We can only say that the work he did needed to be done, and let the verdict go at that. For the rest, never has the world seen ambition so brilliant in its success, so tragic in its fall.

NAPOLÉON.

2. MODERN ENGLISH POLITICS.

398. At the time when peace came to Europe, after the long Napoleonic wars, George III., whose reign and George IV. began far back in the previous century, was still alive; but he did not rule. Long prone to insanity, his mind had given way in 1810, and the appointment of a Regent had become necessary. This office devolved upon his eldest son, who held it until the death of the poor old blind, crazy king, in 1820, when he ascended the throne as George IV. He is said to have been a man of considerable ability; and from his fine person and polished manners he was called by his flatterers the "first gentleman in Europe"; but if to be a gentleman one must lead a decent life and have a feeling heart, then this king deserves not the name.

399. After the battle of Waterloo the sovereigns of England and the Holy Alliance. Austria, Russia, and Prussia entered into what is called the *Holy Alliance*, by which they bound themselves "to aid one another, in conformity with Holy Scripture, on every occasion." By this high-sounding profession they seem to have meant no more than that they would crush the desire for liberty and reform which began to show itself in the several countries. France also joined the alliance; but England, suspecting that its object was the maintenance of despotic government, refused to assent to the principle of interference with the internal affairs of other states.

400. The most important political event of George IV.'s reign was the removal of certain grievous disabilities under which all persons who did not belong to the Church of England labored. These affected both Catholics and Protestant dissenters. The restriction which required all persons taking office to commune according to the rites of the Established Church was

removed in 1828 ; but many grievous laws yet remained in force against Catholics, who were shut out from Parliament and from many offices, franchises, and civil rights.

401. In Ireland there arose a great agitation for the repeal of these laws, and early in the reign of Daniel O'Connell, an Irish barrister of great eloquence, organized the *Catholic Association*, for the purpose of pushing the question of emancipation. The subject was frequently debated in the House of Commons, and motions in its favor were carried ; but the House of Lords would not sanction the repeal of the penal laws. The excitement became intense, and the Catholic Association elected O'Connell to a seat in Parliament. So well did he fight the battle of his Church, that a bill was passed removing all penal laws against Catholics, and placing them on the same political footing as Protestant subjects. The Duke of Wellington, who was at that time Prime Minister, avowed in the House of Lords that he had brought forward the measure in order to avert civil war. The bill received the royal assent in April, 1829. Next year the king died.

402. George IV. was succeeded by his brother, William Henry, Duke of Clarence, who ascended the throne as William IV. He reigned seven years, that is, till 1837.

403. At the time of William's accession, the great question of *Parliamentary Reform* agitated the people. For many years there had been a growing demand for a change in Parliamentary representation, and certainly such a change was greatly needed. Many towns, such as Liverpool and Manchester, which contained a teeming population, were without representation at all, while many small and insignificant places returned to Parliament one or more members. In such boroughs, known as "pocket" or "rotten" boroughs, the property was in most instances in the hands of some one large owner, by

whom the elections were controlled. The large centers of population, unrepresented in the national legislature, could no longer suffer this state of things to continue, and loudly demanded Parliamentary reform.

404. The celebrated *Reform Bill* was brought into Parliament in March, 1831, by Lord John Russell. Passage of the Reform Bill. The two parties in the House of Commons were so evenly balanced, that another appeal was made to the country, and a new House of Commons was returned, pledged to carry "the Bill." After a desperate struggle the measure was passed in the House of Commons by a large majority, but it was thrown out in the Lords. This caused great excitement throughout the country, and riots broke out in many places. On the assembling of Parliament the following year, 1832, the Reform Bill was again introduced, and passed the Lower House; and on finding both the Crown and the people against them, the Lords were induced to give up their opposition to the measure.

405. By this Act three great changes were made: 1. Fifty- Changes it effected. six of the pocket boroughs were disfranchised; 2. Several towns which had sprung, during the last century, into first-class cities, now for the first time received the right of sending members to Parliament; 3. The franchise, or right of voting, was extended more widely among the middle classes. The right of voting for towns was given to the tenants of houses worth £10 a year or upwards; for county members all were entitled to vote who owned land worth £10 a year, or who paid an annual rental of £50.

406. When the Reform Parliament met in the following Abolition of colonial slavery. year, 1833, it justified the best hopes of its friends by entering upon a course of wise and liberal legislation. One of the most important of its acts was the abolition of slavery in the British colonies. The merit of this work is mainly due to William Wilberforce,

who for many years had devoted himself to the question of Emancipation. For the 800,000 slaves who thus received their freedom, a compensation of £ 20,000,000 was paid to their masters.

407. William IV. died in 1837, and was succeeded by Alexandrina Victoria, daughter of his brother, Edward Duke of Kent. She was then eighteen years of age, and three years afterward was married to her cousin, Prince Albert, of Saxe-Coburg and Gotha.

Accession of
Victoria.

408. The most important political event during the early part of this reign was the *Repeal of the Corn Laws*. These were laws imposing heavy duties upon the importation of foreign grain. All who lived by agriculture — the land-owners, the farmers, and the laboring classes — wished to keep foreign grain out of the market, in the belief that it was their interest, by high duties, to *protect* home agriculture. On the other hand, those who held free-trade doctrines argued that every man and nation should be free to buy in the cheapest and sell in the dearest market, and that *all* protective restrictions were futile. In 1839 a number of these men, of whom Richard Cobden was the most prominent, formed what was called the *Anti-Corn-Law League*. By vigorous agitation the cause triumphed in 1846, when bills were carried through Parliament for abolishing or reducing to a merely nominal amount the duties on grain, cattle, and other productions.

Repeal of the
Corn Laws.

409. About the same time the English people were greatly stirred up by what was called the *Chartist* agitation. The Chartists were for the most part workingmen, and took their name from their *People's Charter*, — a document in which they demanded six changes in the Constitution: 1. Universal suffrage; 2. Vote by ballot; 3. Annual Parliaments; 4. Electoral districts; 5. The abolition of property qualification for members; 6. The payment of Parliamentary representatives.

The Chartists.

After some rioting in 1839 the Chartists remained tolerably quiet until 1848, when, excited by the revolutions that took place during that year in France and other parts of the Continent, they determined to show their strength.

410. On Kensington Common, 20,000 of them assembled, for the purpose of walking in procession through London to the House of Commons, there to present a monster petition in favor of their claims. How they were put down. Why they should have been prevented from doing so, if they broke no law, it is not easy for us in this country to see; for with us every one of the six points in their *People's Charter* is a part of the organic law of the land. However, the government took alarm, and appealed to the people. The result was that a quarter of a million of Londoners enrolled themselves as special constables to prevent the dreadful "red republican" demonstration. The affair, however, passed off without any trouble: the Chartists were not allowed to recross the bridges in procession, and there the matter came to an end. From this time the Chartists ceased to be of any importance as an organized body, but their work was of value in educating the public mind, and what they did bore fruit; for, as we shall see, most of the reforms for which they contended have since become law.

411. Since Waterloo there had been no great European war, but the year 1854 was signalized by the Crimean War. outbreak of the Crimean War. This arose from the fact that the Czar of Russia, Nicholas, disturbed the balance of power by seizing the Turkish Principalities of Moldavia and Wallachia. Great Britain and France, afterwards joined by the King of Sardinia, formed an alliance in aid of the Sultan, and engaged in a war with Russia, which was carried on mainly in the Crimea. The chief actions were the victories of the Alma, September, 1854, and of Inkerman', November, 1854. The allied armies then

invested Sebastopol. The siege lasted 349 days, at the end of which time the place was evacuated by the Russians, in September, 1855 ; and in the course of the following year peace was made.

412. Since this time England has been engaged in no considerable war, and the history of the country has been one of steady internal develop- Later English politics. ment. That slow but sure progress in political reform which characterizes the English has been going on all the time. In accordance with a prevalent desire for further Parliamentary improvements, a new Reform Bill was in 1867 brought in and carried by the Tory, or Conservative, Ministry then in power, the chiefs of which were the Earl of Derby and Mr. Disraeli. By this the right of franchise was greatly extended. In 1869 and 1870 important changes were made in Ireland, by measures carried by the liberal ministry under the leadership of Mr. Gladstone. By one act the Irish Church was *disestablished* on the ground that it was the church of the minority of the Irish people,—a measure of justice to the Catholics. By an act passed in 1872 votes in Parliamentary elections are now given by ballot, instead of open voting as heretofore. This was one of the fundamental desires of the Chartists, and brings the English political system still nearer to our own.

3. REVOLUTIONS IN FRENCH POLITICS.

413. The modern history of France presents a striking contrast to that of England. *Reform*—the Character of modern French politics. gradual improvement of the existing order of things—has been the watchword in England ; but in France, since Napoleon I., the people have been able to effect changes only by *Revolution*.

414. Louis XVIII.* was fifty-nine years of age when he

* Louis XVIII. was brother of Louis XVI., and uncle of the Dauphin (son of Louis XVI.), who would have been Louis XVII.; but he died when a lad, owing to his cruel treatment during the Revolution.

was restored to the throne of his fathers. Weary of strife, exhausted alike in her finances and in her population, France now enjoyed tranquillity, and slumbered contentedly beneath the inoffensive government of her new sovereign. He was a man of easy temper, unwieldy person, and mediocre capacity. He desired sincerely enough the good of his people, and wished to rule as a constitutional king. But there were those around him who desired nothing so much as the restoration of the old despotic *régime* of Louis XIV. ; and among these the greatest reactionist was the king's brother, the Count d'Artois [*ar-twa'*], who became king with the title of Charles X., on the death of Louis XVIII., in 1824.

415. With Charles X. absolutism set in. He had as strong a mania for despotic rule as ever possessed the English Stuarts, and was unable, poor blind man, to read the terrible lesson which he should have learned when his brother's head rolled from the guillotine block. In 1827 he disbanded the Civic Guard. In 1830, aided by a minister as blind and foolish as himself, he issued three ordinances which kindled the Second French Revolution. These were: 1. That the liberty of the press was suspended; 2. That the Chamber of Deputies was dissolved before it had met; 3. That the elections were to be made by the Prefects, who were mere creatures of the government.

416. The Parisians met these enactments in a spirited manner; there was a blossoming out of tricolored cockades, a sudden irruption of barricades in the streets, some brisk fights with the troops, and in three days (July 27, 28, and 29, 1830) the people were masters of the city. A provisional government was appointed; and in a few days Louis Philippe, of the House of Orleans, and cousin to Charles X., was elected King of the French. Charles sought refuge abroad, and died in Austria six years later.

417. The new sovereign was now fifty-seven years of age: he had known adversity and privation, had been a refugee in Switzerland, where he taught Account of Louis Philippe. school for a while, had traveled extensively in the United States, and finally settled down in England, where he remained till the downfall of Napoleon.

418. Counting on the salutary effect of these his varied experiences, the French people now looked forward to the reign of Louis Philippe as to a His troubles. period of genuine freedom. Yet the position of the Citizen-King, as he was called, was a difficult and delicate one, for he was between two extreme parties, — on the one hand the republicans, on the other the partisans of the old Bourbon *régime*. It was not long before the troubles of the new reign began, — troubles at Lyons and in Paris itself. Then came repeated efforts made against the king's life. These things impelled him to take several very foolish steps, such as abridging the liberty of the press and making frequent prosecutions, while his want of good faith, his insatiable avarice, and his lavish expenditures alienated the moderate men on whom he might have relied for support.

419. During this period there was a young man who made two separate attempts at revolution; but Early exploits of Louis Napoleon. these sallies were of rather a burlesque character, and had little other effect than that of exciting laughter. The man was Louis Napoleon, a nephew of the Great Napoleon, and son of that Louis Bonaparte who was once king of Holland. He was born at Paris in 1808, educated under the care of his mother, Hortense, and had spent most of his time in Switzerland, where he led a quiet, studious life. His one infatuation was to imitate his great uncle, and it is astonishing how far he was ultimately able to carry the delusion of his name. In 1836 he made an attempt to excite insurrection at Strasburg; but it failed, and he was permitted to go to America. Returning to Europe, he

made a fresh effort in 1840, — this time at Boulogne, whither he went from England with fifty friends and a tame eagle. The troops at the Boulogne barracks, however, would not surrender as he expected, so his crestfallen party made a retreat to their vessel; but Louis Napoleon was arrested, tried, and condemned to imprisonment in the fortress of Ham. After six years he managed to escape in the dress of a workman, and took up his home in England. By this time events were to open for him a new theater of action.

420. The murmurs of the people at the corruptions of the government were growing loud and deep. Revolution of 1848. The king had become exceedingly unpopular. Meetings of disaffected persons in what were called Reform Banquets were now frequent in Paris and the provincial towns. The working-classes adopted as their motto those three words, fatal to sovereigns, — Liberty, Equality, and Fraternity. The crisis came in 1848, when a Reform Banquet, appointed to take place on Washington's birthday (February 22), was forbidden by the government. There was a new appearance of barricades in Paris streets, and the citizen-king, under the very *bourgeois* name of Mr. Smith, took his flight to England, where he lived till his death, two years afterwards.

421. France was now a Republic once more, and a National Assembly was elected by universal suffrage, opening its session, May 5, 1848. The Republic and anarchy. Still, for several months Paris was a scene of anarchy. In June especially the tumult rose to a great height, and a frightful contest began between the populace, the troops, and the national guard. Paris was declared in a state of siege, and General Cavaignac was made Dictator. The city was not quieted during a whole month, and it is calculated that in this time 16,000 persons were killed or wounded.

422. A new constitution, vesting the executive power in a President of the Republic, who should be chosen by all the people and should hold office for four years, was adopted by the National Assembly in November, 1848. Louis Napoleon had returned to France, having been elected a deputy for the department of the Seine. He stood as candidate for the Presidency, and in the following month was elected to the office by the votes of five millions and a half of the French people.

423. He never agreed well with the Assembly, and it was soon manifest that one or the other must be crushed. Indeed, it is quite certain that from the beginning of his Presidency he was busily engaged in weaving plots to make himself master of France. The plan he formed was what the French call a *coup d'état* (stroke of state), which in this case meant a massacre by military force, and the midnight arrest of his opponents. The work was done quietly on the night of December 2, 1851,—so quietly that next morning Paris was in Louis Napoleon's hands, and on the placarded walls men read a decree proclaiming that the Assembly was dissolved, that universal suffrage was restored, and that Paris was under martial law. On the 4th, there was the usual Parisian uprising; but it was put down by the strong hand, after some 800 of those who resisted the usurpation had fallen by the bullets of the soldiery. On the 14th of the following January (1852) a new constitution placed in the hands of Louis Napoleon the government of France for ten years.

424. The strange success attending this extraordinary seizure of power can only be accounted for by the fact that France was completely demoralized by the long period of change and anarchy through which she had passed. How thoroughly, by this time, the French had lost all sense of real political liberty is evidenced by the next step in the marvelous career of Louis

The new constitution.

The Coup d'État.

Cause of Louis Napoleon's success.

Napoleon. This was his elevation to be Emperor by over seven millions of votes, being nearly the entire vote of France.

425. On the 2d of December, 1852, he was proclaimed Emperor with the title of Napoleon III.* On the 30th of January, 1853, he was married to Eugénie de Montijo, a Spanish lady of Scottish extraction and ancient birth. The ceremony was performed with great splendor by the Archbishop of Paris in the Cathedral of Notre Dame.

426. When Napoleon III. assumed the Imperial Crown, he made an utterance which, it was supposed, would be the key to his policy: "The Empire," said he, "is peace" (*L'Empire c'est la paix*). But indeed there have been wars in Europe ever since, in which France has taken the chief part.

427. The year after his accession, when there arose the quarrel between Russia and Turkey that resulted in the Crimean War, he led the way in forming the coalition against Russia. The nation entered with eagerness enough into the contest, and it is generally believed, that, as between France and England, the French had the greater share of glory in the operations before Sebastopol.

428. In 1859 hostilities broke out between Austria and Sardinia. The French Emperor in person took the field in Northern Italy as an ally of Sardinia. It was given out that he intended to free all Italy, from the Alps to the Adriatic; but though the French were victorious over the Austrians at Magenta and Solferino, Napoleon III. stopped short and concluded the mysterious Peace of Villafranca. It did not then appear

* The putative Napoleon II. was the son born to Napoleon I. and Maria Louisa in 1811. He never reigned, and on the abdication of his father was created Duke of Reichstadt in Austria. He died in 1832.

that his conduct was wholly disinterested, for though by his action Lombardy (given up by the Austrians) was joined to Sardinia, yet Victor Emanuel, the king of that state, had to cede to France the two provinces of Nice and Savoy.

429. The last and greatest of Napoleon III.'s wars was that which he declared against Prussia, in The German war. 1870. The reason which he assigned for this act of aggression was, that there had been talk of giving the crown of Spain to Leopold, a distant kinsman of the King of Prussia; but the real reason was that he was very jealous of the greatness of Prussia, which was rapidly accomplishing the reconstitution of Germany; and, besides, he was desirous of establishing his waning popularity in France by means of a successful war. To take away all cause of dispute, Leopold, in July, 1870, withdrew from being a candidate for the crown of Spain. But this did not satisfy Napoleon, who asked the king of Prussia to give formal assurances that Leopold *would never in the future* accept of the crown of Spain. This demand was refused, and France declared war.

430. In the sketch of Germany a brief account will be given of the stupendous struggle which now Summary of events. ensued. It is sufficient for the present to say, that the French crossed the German frontier, but were driven out in a few days, and then the German armies entered France and won a series of great victories. Napoleon III. himself became a prisoner. Paris was besieged, and surrendered to the Germans. Meanwhile Napoleon III. was declared deposed, and a republic was again set up in France. The late Emperor retired to England, where two years afterwards he died.

431. In thus following down through the wars waged during the reign of Napoleon III., we have, for Material prosperity of France. the time being, neglected the internal state of France. The eighteen years of imperial rule formed a

period of quite marked material prosperity. Louis Napoleon had something of his uncle's genius for administrative details. He did much to build up the commerce of the country, to develop its railroad system and its mining and manufacturing interests, and to extend and beautify its cities. The French people, freed for twenty years from anarchy, and directed into industrial channels, became as a nation more practical than they ever were before, and the material prosperity of France was never greater than under the Second Empire.

432. But a nation pays too dearly for peace and material well-being when it purchases them at the price of liberty. The French are a mighty, a noble people, and for centuries upheld the civilization of Europe; yet it is to be said of them, that for twenty years in the midst of the 19th century they permitted themselves to live under a rule which, in principle, if not in practice, was no better than an Asiatic despotism. The real rottenness of the system was clearly disclosed by the German conflict. The issue on trial was this: a people, the bravest, the proudest in Europe, but the great mass of whom were morally enfeebled both by want of education and of intelligent participation in public affairs, opposed to a nation brought up in the public school. The result was a most significant verdict as to the merit of the two systems.

4. THE UNIFICATION OF ITALY.

433. After the Congress of Vienna (1815), Austria hung like a millstone round the neck of Italy; so that this beautiful land can hardly be said to have had any history from 1815 to 1848. Austrians swarmed in the basin of the Po, and creatures of Austria wore the coronets of Tuscany, Modena, and Parma.

434. When Pius IX. became Pope, in 1846, he began to

Italy, 1815-1848.

make some useful changes among the people of the Papal States. The Austrians, alarmed at any signs of growing freedom, entered Ferrara in 1847, ^{Revolution of 1848.} and all Central Italy rose in arms against the tyrants. The following year saw the flame of revolution kindled in Lombardy. The Austrian troops were driven from Milan, and Charles Albert, King of Sardinia, took the field against them. But the hour of triumph was short: the Austrians soon reconquered Lombardy and invaded Sardinia, and Charles Albert, defeated at Novara in 1849, abdicated, and was succeeded by his son Victor Emanuel II. Meanwhile Venice, which had again become a republic, was recovered by Austria. Rome, where a republic had been set up, was overcome by troops sent by the new republic of France. In the other Italian States the princes who had been frightened by the revolutionary movements into granting constitutions, withdrew these. Thus, after 1849, Italy was left in much the same case as she had been in before the uprising.

435. In this depressed state of affairs the one outlook for Italian patriots, who yearned intensely for the freedom and unity of their country, was ^{Victor Emanuel.} in Sardinia, whose new king, Victor Emanuel II., was known to be liberally inclined. His subjects, the Piedmontese, enjoyed a constitutional government, a free press, and a large share of religious liberty. Victor Emanuel did not disappoint the good hopes of the patriots, for he introduced many reforms, and kept his word so faithfully that he won for himself the honorable nickname of *Il Re Galantuomo* (The Honest King).

436. In 1853 Count Cavour became prime minister to Victor Emanuel. He was one of the ablest ^{Cavour's plans.} statesmen of the 19th century, and passionately desired to see all Italy free and united. As an important step towards this end, he induced the king in 1855 to enter into the war which England and France were carrying on

against Russia in the Crimea ; for he reasoned that if Italy should come to be regarded as a useful ally by the great powers, her deliverance might be hastened by foreign interference. Accordingly, at the Congress of Paris, held the following year to arrange terms of peace between the allies and Russia, Cavour took the opportunity of laying before the representatives of the European powers the unhappy condition of his countrymen in the other Italian States. This led France and England to remonstrate with the King of Naples, who was one of the worst of the Italian tyrants, and at length the dispute became so serious that their ambassadors were withdrawn from Naples. And now we come to the eventful days that changed the little kingdom of Sardinia into the kingdom of Italy.

437. In 1859 France and Sardinia declared war against Austria, and the Emperor Napoleon III. said he would free Italy from the Alps to the Adriatic. The Austrians were beaten in the two great actions of Magenta (June 4, 1859) and Solferino (June 24), and it seemed as though the French Emperor would keep his word. But he found that if he went further Prussia would take up the cause of Austria, and so he concluded the Peace of Villafranca. Austria gave up to the King of Sardinia Lombardy to the west of the Mincio. In March, 1860, Tuscany, Modena, Parma, and Romagna, by a general vote of the people, became subject to the King of Sardinia.

438. In the mean time the doings of one man gave freedom to Naples and Sicily. Joseph Garibaldi,* "the hero of the red shirt," issuing from the rocky islet of Caprera,

* Joseph Garibaldi, born at Nice in 1807, has had a most eventful and wandering life. After making some voyages as a sailor, he engaged in plots with Mazzini against Charles Albert of Sardinia. Escaping from the perilous consequences of these, he carried his sword to South America, where he fought against Brazil on behalf of Rio Grande. On his return to Europe he aided in defending Rome against the French (1848).

landed in May, 1860, at Marsala in Sicily, proclaiming himself Dictator for Victor Emanuel. Storming Garibaldi's operations. Palermo, the capital of Sicily, and defeating the troops of the King of Naples at Melazzo, he then invaded the mainland, forcing Reggio to capitulate. The King of Naples took refuge in the maritime fortress of Gaeta, while Garibaldi entered the capital and nominated a provincial government.

439. The troops of Sardinia soon invaded the Papal States, whose armies they defeated, and whose Italy a kingdom. seaport of Ancona they forced to capitulate. Other victories followed, and the kingdom of the Two Sicilies became a dependency of Sardinia. By vote or revolution all the other States, except the Papal territories and the Austrian province of Venetia, were in 1861 amalgamated into the Kingdom of Italy, and the Italian Parliament made Victor Emanuel king of Italy.

440. The rest of the story of Italian liberation is soon told. When the war between Austria and Closing events. Prussia broke out in 1866, Italy joined Prussia, and Austria had to give up Venice and Verona. Lastly, when the war between France and Germany (1870) caused the French troops to be withdrawn from Rome, the eternal city was at last joined to the Italian kingdom. The entrance of Victor Emanuel into Rome was the end of the work of deliverance and union. Italy is now free and united, and has Rome for her capital.

5. THE GERMAN EMPIRE RESTORED.

441. Until the Napoleonic wars, the German Empire, or "Holy Roman Empire," the true representative of the Empire of the Cæsars, had con- Review of German politics.

Another turn of Fortune's wheel, — and he appears as a soap-boiler and candle-maker in America; then is transformed to a farmer on the rocky islet of Caprera.

tinued to exist in name, though, since the Peace of Westphalia, the union of the German States had been very lax indeed. But under Napoleon even the name of union under an imperial head passed away. First he succeeded in detaching the two duchies of Bavaria and Würtemberg and several smaller states, and these he formed into the Confederation of the Rhine.* And at last the Emperor, Francis II., in 1806, formally resigned the imperial crown, and was called simply *Emperor of Austria*; — so that, after this, Germany was no longer, even nominally, a united state, acknowledging a common head.

442. When, after the downfall of Napoleon in 1815, the status of the various European nations was settled at the Congress of Vienna, the jealousies of the greater German states, especially Austria and Prussia, did not permit that the Empire should be restored. Instead of this the German princes united by a lax federal tie in what was called the *German Confederation* (June 8, 1815), which union lasted until quite recent times. It was made up of thirty-nine states.† Each state was to remain independent in matters that affected *it* alone, — the object of the confederation being merely the regulation of those affairs common to all German states equally. A permanent Diet, or Parliament, consisting of the plenipotentiaries of the states, was to hold its sittings in Frankfort-on-the-Main, the representatives of Austria presiding. The members of the Confederation agreed never to declare war against one another; there was to be a confederate army, to which each

* See page 451.

† The principal of these were: (1) Austria, (2) Prussia, (3) Bavaria, (4) Saxony, (5) Hanover, (6) Würtemberg, (7) Baden, (8) Hesse, (9) Darmstadt, (10) Brunswick, (11) Mecklenburg-Schwerin and Nassau. The votes in the Diet were so regulated that the eleven states of first rank alone held a full vote, the secondary states holding merely a half or the fourth of a vote.

state was to contribute according to its population, and all subjects of dispute between the various states were to be referred for settlement to the Diet.

443. By the Act of Confederation all the princes promised free constitutions to their people. This was a concession to the spirit of the age ; but, in fact, most of them forgot to make good their promise. Broken promises. This was a great disappointment to the hopes of the liberal and patriotic party throughout Germany.

444. Moreover, for some time a strong feeling for the real unity of Fatherland had been growing up, especially since the war of freedom. There Unity,—a step towards it. was a very general desire that Germany should cease to be a mere bundle of states only nominally united, and become a *strong* power by becoming a *united* power. One not unimportant step towards realizing this wish was taken as Prussia gradually, from 1828 onwards, became the center of a commercial union among the German states, the members of which agreed to levy no duties on merchandise passing from one state to another, but to levy them only at the common frontier. This union, called the *Zollverein*, or Customs' Union, was gradually joined by most of the German States.

445. But, aside from this, most of the German sovereigns and princes showed themselves to be thorough absolutists in principle and practice. The government and the people. Repressive measures were used to crush every little manifestation of independence, and the press was completely shackled. But, indeed, these acts had only the effect of making the desire for freedom and unity stronger. When the French Revolution of 1830 took place, there were slight sympathetic uprisings in Prussia and Austria, and especially in Brunswick ; but very little came of these.

446. However, the French Revolution of 1848 (when King Louis Philippe was driven out, and a republic was set up) had more serious conse- The earthquake year.

quences in Germany. The people this time were in earnest, and resolved to obtain, at whatever cost, their chief demands. The princes of the smaller states were alarmed, and most of them at once adopted a more liberal policy. In Austria the reforming or revolutionary party everywhere gained the upper hand; and the Emperor was obliged to summon a Diet, to be elected by universal suffrage in all his hereditary lands. In Berlin the uprising was even more determined; there were sharp contests between the people and the soldiers; and the king, Frederick William IV., was obliged to grant a new constitution. It was generally hoped that union as well as freedom was now to be achieved in Germany, for the movement gained such height that members from the various states were elected to a *National Assembly*, which was opened at Frankfort in May, 1848, and which had the right of acting for all Germany, since the Diet had meanwhile voluntarily ceased to exist.

447. But, once again, the movement for union and independence proved abortive, and this time when the people seemed to have everything their own way. This failure was due to several causes. To begin with, the National Assembly was largely under the influence of well-meaning, but visionary men, and showed itself unequal to the task of reconstituting Germany. Then the movement for independence was seriously checked by the great excesses to which the revolutionary party in Austria and Hungary went.

448. The Hungarians, it must be remembered, were under the Austrian dominion, and formed one of the states of Francis II.'s "Empire." But they had once been a great and an independent nation, and they sighed to be freed from the yoke of the House of Hapsburg. Headed by the famous orator Kossuth, they demanded complete independence, and set up a republic. But unluckily feuds arose between the Magyars and the

Cause of the
people's fail-
ure.

Uprising and
down-putting
of Hungary.

other races in Hungary, and this greatly helped the reconquest of the country by Austria, which, however, was not done without the help of Russia.

449. While these events were taking place in Hungary, there was a gradual subsidence of the republican movement in Germany proper, so that in The tide recedes. Austria and Prussia and the other states the government got the upper hand. And now that the governments were freed from the fear with which the revolutionary outburst had at first inspired them, they became less and less inclined to adopt any very thorough changes. Moreover, the National Assembly, still sitting at Frankfort, was violently divided. True, it got so far in April, 1849, as to form a kind of constitution, and it offered the Imperial power to the King of Prussia, in whose family it was to be hereditary. Frederick William, however, refused to accept the title under a constitution which, he said, would not give him power sufficient to fulfil the duties of an emperor.

450. All this time, and long afterwards, the greatest difficulty in the unification of Germany arose from Jealousies of Prussia and Austria. the jealousies between Prussia and Austria, each believing that *it* should form the nucleus in the reconstitution of the Empire. Prussia, when Austria was engaged in quelling the Hungarian revolt (1849), made an effort to unite Germany, leaving out Austria. Several states joined Prussia in an alliance. Then Austria, alarmed by the attempt of Prussia to seize the place in Germany which she looked on as lawfully hers, made a counter-effort, and succeeded in joining with her various states in another alliance, leaving out Prussia. Feeling ran very high, and the two sections were nearly plunged into civil war on a dispute that arose in regard to Hesse-Cassel. The difficulty was settled by the temporary re-establishment of the Confederation much as it had been before 1848. But it remained clear that the great question in German politics was whether

Austria or Prussia should occupy the first place in Germany.

451. The years that followed the revolutionary period begun in 1848 were on the whole prosperous. *Events to 1859.* Commerce flourished, and much was done to promote popular education. In the year 1859 Austria plunged into the war with Sardinia, — the war in which Napoleon III. took sides with Sardinia and compelled Austria to give up Lombardy.* Austria tried to drag the Confederation into the struggle on her side; but Prussia firmly adhered to the principle that the Confederation could take no part in any contest that did not directly affect German interests. As bearing on Germany, this war is only important in that the partial unification of Italy, which was the result of it, gave a fresh impulse in many German minds to the desire for national unity.

452. King Frederick William IV. of Prussia died in 1861, and was succeeded by his brother, who *Prussia under William I.* took the title of William I. He appointed Otto von Bismarck, one of the ablest of modern statesmen, his prime minister and minister of foreign affairs. The king was an enthusiastic soldier, and wished to see the Prussian army reorganized. His efforts to achieve this ended to disputes with the Parliament, which did not wish to sanction the heavy expenditures required. But the king and Bismarck, in direct violation of the constitution, carried out the scheme.

453. All this time the relations of Prussia and Austria, and of both to the Confederation, were very *Progress of the quarrel.* unsatisfactory. Bismarck declared in Parliament that the German problem could be solved only by "blood and iron." For a time the jealousies of the two rival states were kept in abeyance by the absorbing interest of what is called the "Schleswig-Holstein question."

* See page 469.

This joined Prussia and Austria against Denmark. In February, 1864, the united armies crossed the Eider, and drove the Danes from a rampart called the *Danewirk*. The fortress of Düppel also was taken, and such loss was inflicted on Denmark that she consented to part with the three duchies of Schleswig, Holstein, and Lau'enbürg, in favor of the Emperor of Austria and the King of Prussia.

454. And now a fresh difficulty arose in regard to the disposition that should be made of the duchies. Prussia desired to annex them to her own territory; Austria, though not anxious for them, was still resolved that Prussia should not obtain them. The dispute was finally settled amicably. However, the real difficulties between the two rival powers were not lessened, — and Bismarck did not desire that they should be lessened, for he saw in these complications the opportunity for increasing the greatness of Prussia.

Relations of
the powers.

455. When a nation wishes to make war, the opportunity is usually found. Prussia discovered one in the still open dispute with Austria in regard to the Schleswig-Holstein question. But the struggle that now began, and which proved to be one of the most rapid and decisive in history, had in reality very little to do with the petty question with which it was nominally associated. The real issue was the long-pending one of whether Austria or Prussia should guide the destinies of the Fatherland.

The fresh out-
break.

456. The conflict was precipitated in June, 1866, and was continued through what is called the Six Weeks' War. Italy united with Prussia in declaring war against Austria. For a time Austria had tolerably good fortune. The Italians were defeated at Custozza by the Archduke Albert. But the Prussians, armed with the needle-gun, — a breech-loading rifle of new construction, — invaded Bohemia under the command of their king, and inflicted a signal defeat upon the Austrians under command

Events of the
Six Weeks'
War.

of Marshal Benedek at Sadowa, near Königgrätz. Austria was obliged to sue for peace, which was concluded at Prague, in August of the same year (1866).

457. By this treaty Austria was forever excluded from Germany, and had to pay a heavy indemnity. **Results of the struggle.** Besides this, several of the states that had taken part with Austria — Bavaria, Baden, and two or three others — entered into a secret alliance with Prussia, by which their troops were placed at the disposal of Prussia for the defense of Germany.

458. The final result was that all the states to the north of the Main united to form the *North German Confederation* under the leadership of Prussia, the whole military system of the Confederation being placed at the disposal of that country. The first Diet of the new Confederation met at Berlin in February, 1867. **Formation of North German Confederation.**

459. This partial union of Germany was a great advance on the old state of things, but still it was far from complete. A great party — the so-called *National Liberal* party — had already been formed, whose leading aim was the union of South Germany with the new Confederation. Still, such a union seemed far off, when an event happened by which, amid the rejoicing of Germany, the object was attained. This event was the war with France. **Further progress.**

460. The *occasion* of the war with France, as has already been stated,* was the fact that Leopold, of Hohenzollern, a kinsman of the King of Prussia, allowed himself to be a candidate for the Spanish throne; but the underlying *cause* was the intense jealousy of Napoleon III. at the success of Prussia in gathering so great a part of Germany around herself. **Cause of the war.**

461. In declaring war, which Napoleon III. did in July, 1870, he hoped that the South Germans, if they did not actually join France, would at least be neutral. **Napoleon's disappointment.**

* See page 469.

least remain neutral. But he was greatly disappointed. The petty occasion of the dispute was soon wholly lost sight of, and most of the South German states, realizing that the struggle was one of aggressive and domineering France against the long-humiliated Fatherland, willingly united with Prussia. Austria and the other dominions of the House of Austria alone held back.

462. Soon a million of men were in the field, under the King of Prussia. His chief adviser was Gen- Beginning of the struggle.
eral von Moltke, one of the ablest strategists of modern times. The French, assuming the offensive, crossed the frontier, fully expecting, in their blind confidence, that they would soon dictate a peace at Berlin.

463. With the details of this remarkable campaign it will be impossible for us to occupy ourselves ; Account of the war.
but a few of the prominent points are here presented.

Battle of Weis'senburg. — The French having invaded Germany, active operations commenced early in August, 1870. Battle of Weis-senburg, fought between the German army under the Crown Prince and the French, August 4th: result, the French were defeated. The army of the Crown Prince now encamped on French ground.

Battle of Wörth, — fought between the German forces and the French army under Marshal MacMahon, August 6th: result, defeat of the French ; and, as some other successes were won by the other German columns about the same time, the whole German army now entered France.

Battle of Sedan'. — The main French army under Marshal Bazaine was defeated in several engagements near Metz ; and after various operations in different quarters the French were driven from all sides into Sedan, which was surrounded by the Germans (September 1) : result, the French army of 80,000 men was forced to surrender ; the Emperor Napoleon III., who was present with this army, yielded his sword to King William, and received as his residence the Castle of Wilhelmshöhe, near Cassel.

Siege of Paris. — Soon after Sedan, two of the German armies, under the Crown Prince, marched towards Paris, which they invested (September 19th), while the third German army occupied the country to the south and southeast, and other forces the region to the north and

northeast. The French made several attempts to break through the German line of investment (September and October), but were driven back.

Surrender of Metz. — Meanwhile, a new French army had been raised to operate with a view to the relief of Paris, but just then fresh disasters befell France. Marshal Bazaine, surrounded by German forces at Metz, after having tried several times to escape, capitulated with his whole army of 170,000 men (October 27).

Surrender of Paris. — A last attempt was made by the French to escape from Paris in January, 1871; but they were driven back with heavy loss, and as, in spite of some partial successes, all their armies in the field were defeated, the "Government of the National Defense," which had taken the control of affairs after the surrender of Napoleon, opened negotiations for peace. Paris formally surrendered January 28, 1871.

464. The final treaty of peace between France and Germany, called the *Treaty of Frankfort*, was signed May 10, 1871. Very severe terms were imposed on France, which had to give up to the Germans the provinces of Alsace and German Lorraine, and pay an indemnity of 5,000,000,000 francs.

465. Even before the termination of hostilities, the long-desired result, the unification of Germany, was accomplished. The war itself had inspired the South Germans with a warm desire for a closer union with the Northern Confederation. By treaties made with the various South German states in November, 1870, the Northern Confederation was changed into a *German Confederation*, under the presidency of William I. of Prussia. In the following month the German sovereigns proposed that the President of the Confederation should receive the title of *German Emperor*. The proposal being agreed to, King William was, in the palace of Versailles, solemnly proclaimed Emperor of Germany, January 18, 1871.

467. In the month of March the first Diet of the new Empire was opened at Berlin. By this Parliament a constitution was adopted for the twenty-

Terms of
peace.

Creation of the
Empire.

The German
constitution.

five states forming the Empire. Each of these regulates its own affairs in so far as they do not affect other states, and is allowed to send and receive diplomatic representatives. What concerns the whole country is left to the Imperial Government. The duties of legislation rest with the Federal Council, and the Diet; the executive power is wielded by the Emperor. He has the right to declare war and make peace, to form alliances and conclude treaties.

468. Thus it was that the greater part of Germany was again united as a single power. In the mean time Austria and its adjuncts formed a separate kingdom known as the Austro-Hungarian monarchy. The triumph of Prussia was complete; but it was also the triumph of Germany. The Austro-Prussian war raised Prussia to the first place in Germany; the Franco-Prussian war raised Germany to the first place in Europe.

Summary of results.

GREAT NAMES OF THE NINETEENTH CENTURY.

PHILOSOPHERS AND SCIENTISTS.

Humboldt, Alexander von (1769–1859), born at Berlin — the greatest of descriptive naturalists — chief work, his *Kosmos*, an account of the physical phenomena of the universe.

Cuvier (1769–1831), a Swiss, but lived most of his life in Paris — a very distinguished naturalist and paleontologist — principal works, *The Animal Kingdom* and *Discourses on the Revolutions of the Surface of the Globe* — employed by Napoleon as minister of education.

Hegel (1770–1831), a German philosopher and founder of a new school of philosophy.

Davy, Sir Humphry (1778–1829), a celebrated chemist and natural philosopher — discovered a number of scientific facts and principles — inventor of the safety-lamp for miners.

Arago (1786–1852), a distinguished French *savant*, and especially renowned in astronomy — was superintendent of the Paris Observatory.

Hamilton, Sir William (1788–1856), a Scotch metaphysician and

- logician — author of works on mental philosophy and logic — contributed greatly to advance metaphysical science as a professor and critic.
- Faraday** (1791–1869), an eminent physical philosopher — made important discoveries relative to magnetic electricity and light — the prince of lecturers on scientific subjects.
- Comte** (1798–1857), a famous French philosopher, and author of the *Positive Philosophy*.
- Liebig** (1803–1872), born at Darmstadt — a great chemist — professor at Munich — has written much on the chemistry of agriculture and physiology.
- Mill, John Stuart** (1806–1873), an eminent English philosopher — author of *Political Economy*, *Logic*, *On Liberty*, etc.
- Brewster, Sir David** (1781–1868), a distinguished Scottish scientist — editor of the *Edinburgh Encyclopedia* — wrote *Letters on Natural Magic* and a *Life of Newton* — famous for his discoveries in optics.
- Leverrier** (1811–), a great French astronomer — proved by mathematical calculation that there must be another planet beyond the orbit of Uranus, and told when and where it would come into view, August, 19, 1846; in September it was discovered in nearly the locality indicated, and is now known as Neptune.
- Tyndall, John** (1820–), a natural philosopher and most clear and eloquent expounder of scientific subjects — author of *Heat considered as a Mode of Motion*, *Glaciers of the Alps*, etc.
- Agassiz, Louis J. R.** (1807–1873), an eminent naturalist — born in Switzerland, but spent the last twenty-five years of his life in this country — leading works, *Poissons Fossiles*, *Contributions to the Natural History of the United States*, and *Methods of Study in Natural History*.

WRITERS.

- Goethe** (1749–1832), born at Frankfort-on-the-Main — one of the most glorious names of Germany — chief works, *Werther*, *Wilhelm Meister*, and *Faust*.
- Richter** (1763–1825), a German author and humorist, and a most original writer — principal works, *Titan*, *Hesperus*, and *Levana on Education*.
- Wordsworth, William** (1770–1850), one of the Lake Poets — chief works, *The Excursion* and *The White Doe of Rylstone* — Poet Laureate after Southey; many of his poems describe common events in everyday words.
- Scott, Sir Walter** (1771–1832), born in Edinburgh — famed as a

poet, and still more so as a novelist—began with a translation of Bürger's *Leonora* and *The Wild Huntsman*—chief poems, *Lady of the Lake*, and *Lay of the Last Minstrel*.

Coleridge, Samuel Taylor (1772–1834), one of the Lake Poets—chief works, *The Ancient Mariner* and *Christabel*, an unfinished poem.

Campbell, Thomas (1777–1844), born and educated in Glasgow—author of *Pleasures of Hope*—more admired for his warlike ballads, such as *The Battle of the Baltic* and *Ye Mariners of England*.

Béranger (1780–1857), a noted lyric poet of France—sang of the common people and their interests: the Burns of France.

Grimm, Jacob and William (1785–1863), brothers, and associated as philologists and antiquarians—through their labors comparative philology was raised to the dignity of a science—greatest works, *Teutonic Grammar* and *German Dictionary*—known to the young as the authors of *Household Tales*.

Guizot, François Pierre Guillaume (1787–1875), a prominent statesman and the most distinguished modern French historian,—author of a "History of Civilization in Europe" and many other works.

Byron (1788–1824), born in London—one of the leading British poets—his chief work is *Childe Harold's Pilgrimage*, written in the stanza of Spenser—died at Missolonghi (in Greece), of fever, aged 36.

Carlyle, Thomas (1795–), born in Scotland, but has lived most of his life in London—one of the greatest of modern English writers—distinguished for his powerful and picturesque, though somewhat eccentric, style—did much to introduce German literature to the knowledge of the English-speaking public—greatest works, the *French Revolution* (a grand prose epic), *Life of Frederick the Great*, *Life of Cromwell*, *Sartor Resartus*, etc.—has profoundly influenced the thought of his age.

Prescott (1796–1859), an eminent American historian—devoted himself especially to Spanish history—chief works, *Ferdinand and Isabella*, *Conquest of Mexico*, etc.

Thiers (1797–), a French historian and statesman—author of *The French Revolution* and *The Consulate and the Empire*—was made President of the French Republic after the overthrow of Louis Napoleon, in 1870.

Pushkin (1799–1837), the greatest of Russian poets.

Macaulay (1800–1859), the finest historian of the day—chief work, *History of England*—distinguished for his brilliant and picturesque style.

Hugo, Victor (1802–), a French poet, dramatist, novelist, and

politician — took part in the school of Romanticists in opposition to the Classicists — best-known novels, *Notre Dame* in his earlier days, and *Les Misérables* and *Ninety-Three* in his latter days.

Emerson, Ralph Waldo (1803 -), the “sage of Concord” — the most subtle and original thinker of America — leading works, *Essays*, *Representative Men*, etc.

Hawthorne (1805 - 1864), an American novelist — distinguished for the subtlety of his analysis and his graceful, powerful style — author of *The Scarlet Letter*, *Twice-Told Tales*, etc.

Tennyson, Alfred (1809 -), Poet Laureate of England — a great master of rhythm and metrical harmony — his poems marked by sweetness and depth of passion — leading works, *The Princess*, *In Memoriam*, *Idyls of the King*, etc.

Thackeray (1811 - 1863), though not the most popular, yet the profoundest, of English novelists — distinguished for his subtle analysis of character — leading works, *Vanity Fair*, *Pendennis*, *The Newcomes*, etc.

Dickens, Charles (1812 - 1870), the most popular of modern English novelists — the Shakespeare of the 19th century — his novels distinguished as generally having some object of philanthropy or reform.

ARTISTS.

Thorwaldsen (1770 - 1844), a Danish sculptor, and author of many noble works — founder of the Art Museum at Copenhagen.

Beethoven (1770 - 1827), a great German musician — among his many works may be named *The Mount of Olives*, an oratorio, and *Fidelio*, an opera.

Turner (1775 - 1851), one of the best landscape painters of the English school — painted also several historical pictures — died under an assumed name in a humble lodging in London.

Weber (1786 - 1826), a distinguished musician of the German school — his greatest work, *Der Freischütz*, was brought out in 1822 at Berlin.

Vernet, Horace (1789 - 1863), one of the greatest of modern French painters — his favorite subjects, battles and African hunting — painted on very large canvases.

Rossini (1792 - 1868), a great Italian musical composer — most celebrated operas, *William Tell* and *The Barber of Seville* — author also of *Stabat Mater*.

Meyerbeer (1794 - 1864), a renowned German musical composer — at six years of age astonished the public by his playing — greatest operas, *Robert le Diable*, *The Huguenots*, *The Prophet*, and *L'Africaine*.

- Donizetti** (1798–1848), a composer of Italian operas—best known, *Lucrezia Borgia* and *Lucia di Lammermoor*.
- Landseer, Sir Edwin** (1802–1873), famous for his paintings of animals, which have been widely popularized in engravings.
- Kaulbach, Wilhelm von** (1805–1874), the most illustrious modern German painter—the leader of the idealistic school—spent most of his life in Munich, the last twenty-five years as director of the art academy—produced many grand paintings, his masterpieces being the “Battle of the Huns” and the “Destruction of Jerusalem.”
- Mendelssohn** (1809–1847), born at Hamburg, of German-Jewish parentage—a musician of the highest genius—chief works, his music for the *Midsummer Night's Dream*, and his sublime oratorios, *St. Paul* and *Elijah*.
- Verdi** (1814–), an Italian composer—best-known operas, *Il Trovatore* and *La Traviata*.
- Doré, Gustave** (1833–), a French artist—distinguished for extraordinary powers of conception—well known for his illustrations of the works of Dante, and of *Don Quixote* and the *Wandering Jew*.

INVENTORS.

- Brunel, Sir Isambard** (1769–1849), a distinguished engineer—greatest work, the *Thames Tunnel*; begun 1826, finished 1843.
- Stephenson, George** (1781–1848), born at Wylam, Northumberland—the great railway engineer—inventor of the locomotive engine—died at Tapton, aged 67—his son Robert is distinguished as the engineer of the Tubular Bridge over the Menai Strait.
- Daguerre** (1789–1851), inventor of the daguerreotype—the production by light of images on a sensitive surface was already known, but Daguerre discovered how to fix the image in hyposulphate of soda.
- Morse, Professor S. F. B.** (1791–1871), born in Massachusetts—educated for a painter, but devoted himself to science—his world-wide fame is based on his invention of the electric telegraph.

SWINTON'S READERS.

An Entirely New Series of School Reading Books,

BY

PROF. WM. SWINTON.

THESE books are preëminently **Language Readers**. They present a most complete development of the study of words and sentences as an essential condition of good understanding and correct reading.

The illustrations are by the most eminent American artists: Church, Dielman, Fredericks, Pyle, Harper, White, and others, and were drawn expressly for these books.

- I. **Swinton's Primer and First Reader.**—In print and script exercises. The script exercises are a specially attractive feature, being white on black, as in blackboard and slate work, the script being the result of careful experiment in securing a practical style of letter for this sort of work. Another noticeable feature of this book is the type, which was made for us, and which is unlike any other font of type heretofore cut, in the matter of size and face. Handsomely illustrated, and bound in cloth. One volume; 120 pages.
- II. **Swinton's Second Reader.**—In print and script exercises. This is also a beautiful book, and commends itself especially for its grading, for the purity and sweetness of its literary form, and for the development of "language work." Illustrated, and bound in cloth. 176 pages.
- III. **Swinton's Third Reader.**—Presenting many new and original features. Noticeable for the charming series of original lessons entitled "Home Pets," "Bright Examples," and "About Plants." Illustrated, and bound in cloth. 240 pages.
- IV. **Swinton's Fourth Reader.**—A book of choice selections for this important grade, carefully edited and arranged. It contains also many useful and entertaining original lessons, especially on "Useful Knowledge" and "Pictures of American History." Illustrated, and bound in cloth. 384 pages.
- V. **Swinton's Fifth Reader and Speaker.**—This book contains abundant exercises in language reading, recitation, and declamation. An instructive and entertaining original feature is the series of lessons under the title of "Glimpses of Science," presented in the highest form of literary art. Illustrated, and bound in cloth. 480 pages.

* * Sample pages and full descriptive circulars, by mail, to teachers and educationists.

* * A set of the Readers, from the First to the Fifth, inclusive, sent to any teacher or educationist on receipt of \$1.75.

SWINTON'S GEOGRAPHIES.

"The famous Two-Book Series,"

By PROF. WILLIAM SWINTON,

CONSISTING OF

- I. **INTRODUCTORY GEOGRAPHY**, in Readings and Recitations; and
 - II. **GRAMMAR-SCHOOL GEOGRAPHY**, Physical, Political, and Commercial.
-

The Geographies are fresh and progressive in character, and meet with great favor everywhere.

The Grammar-School Geography is published in six different editions, treating the local geography of different sections.

1. **New-England Edition**, containing supplement of thirty-three pages, with special text and maps, for the New-England States.
2. **Middle-States Edition**, with special supplement of thirty-one pages, for the Middle States and the District of Columbia.
3. **Southern-States Edition**, with supplement of thirty-seven pages, for the Southern States.
4. **East-Central States Edition**, with supplement of thirty-three pages, for the East-Central States.
5. **West-Central States Edition**, with supplement of thirty-eight pages, for the West-Central States and the Territory of Dakota.
6. **Pacific-States Edition**, with supplement for the Pacific Highland and Coast States and Territories.

Both the *Introductory* and *Grammar-School Geographies* are new works, thoroughly modern in treatment, and handsomely illustrated.

The maps and statistics are fresh and reliable, and every effort is made to keep them up to date in all particulars.

* * *Liberal Terms for Supplies for Examination or Introduction.*
